The Hundred Years' War, fought principally between England and France, finally comes to an end. The war has ravaged the French countryside as the warring armies preferred to stage large-scale raids into enemy territory rather than fight pitched battles.

1469

King Ferdinand and Queen Isabella marry, joining the Crowns of Castile and Aragon.

1492

Catholic forces capture Granada, the last Muslim stronghold in Spain. This ends the *Reconquista*, the 700-year-long struggle to evict Muslims from the Iberian Peninsula.

Christopher Columbus discovers the Americas.

1494

Charles VIII of France invades Italy, inaugurating the Hapsburg-Valois Wars, which will last until 1559. The French army employs gunpowder artillery with great success against the medieval defenses of the cities of Italy. These cities traditionally had been defended by thin, high walls, which served well against medieval siege tactics. Against heavy cannon, however, such walls cannot stand.

Thus, the French campaign eventually inspires a massive change in European defensive architecture, the development of *trace italienne*, or Italian-style, fortifications. Such defenses consist of low, thick, angled walls, arranged to offer interlocking fields of fire against an opponent. Such defenses will become essential in Europe and in America.

1517

Martin Luther nails his Ninety-Five Theses to the castle church door in Wittenberg, Germany. His action will spark the Protestant Reformation and lead to two centuries of religious warfare between Protestants and Catholics.

1519

Hernando Cortés's expedition arrives in Tenochtitlán, Mexico.

1520–1521

Aztec forces drive Cortés and his Spaniards from Tenochtitlán. Cortés captures the city after a three-month siege.

1532–1533

The Spanish conquistador Francisco Pizarro leads 180 men in the conquest of the Inca Empire of Peru.

1540

Ignatius Loyola founds the Society of Jesus. The Jesuits will serve as the spiritual envoys of the Counter Reformation that will seek to destroy Protestantism and spread Roman Catholicism around the world.

1547

King Henry VIII of England dies, and Edward VI becomes king.

1553

King Edward VI dies, and Mary I becomes queen of England. During her brief reign, she attempts to undo the English Reformation.

1554

Mary I of England marries Philip II of Spain.

1557

The English lose control of the port of Calais in France early in the Anglo-French War of 1557–1559.

1558

Upon the death of Mary I, Elizabeth I succeeds to the throne of England.

1559

The treaty of Cateau-Cambr sis ends the wars between France and Spain for control of Italy.

1565

Turkish forces under the command of Suleiman the Magnificent besiege but fail to take the Christian stronghold of Malta in the central Mediterranean.

Spanish forces begin building a fortress, the Castillo de San Marcos, at St. Augustine, in what will become Florida. The fortress provides a classic example of the *trace italienne* fortress design in the New World.

1585

English settlers unsuccessfully attempt to found a colony at Roanoke in what later will be North Carolina.

1588

A British fleet thwarts the Spanish Armada in the English Channel, attacking the 130 Spanish warships from long range and damaging them through superior naval gunnery. In early August, the British attack the Armada with fire ships, forcing the fleet to flee and disperse. Prevailing winds force the Spanish northward. While attempting to escape by sailing around Scotland, the Armada falls prey to storms and loses almost half its total strength.

1598

The Edict of Nantes, issued by Henry IV of France, grants limited religious liberties to French Protestants, known as Huguenots. The edict also establishes several Protestant havens inside deeply Catholic France. Later French rulers will restrict Protestant liberties, and the edict will be revoked in 1685.

1600–1603

English military leader Lord Mountjoy suppresses the Earl of Tyrone's Rebellion in Ireland. The Spanish had supported the rebellion in part as a response to English attacks on Spanish outposts in the Caribbean and South America.

1603

Queen Elizabeth I dies. James VI of Scotland is crowned King James I of England.

1605

The Gunpowder Plot, a scheme by Catholics to blow up the British Parliament, is discovered before it can be executed.

1607

The Jamestown colony is founded by English adventurers in Virginia. Because of its location in a swampy area on the York-James peninsula, Jamestown is plagued by all manner of mosquito-borne illnesses. Many settlers will be lost to disease and starvation before the colony begins to thrive.

1609

Beginning of the Twelve Year's Truce between the Spanish and the Dutch, temporarily ending the conflict between the two sides over the territory that is now Belgium.

1618–1648

On May 23, 1618, Bohemian Protestants, fearing the intentions of the Catholic Holy Roman Emperor, throw several of his representatives out a window. This event, the so-called Defenestration of Prague, helps to ignite the conflict known as the Thirty Years' War, which will devastate much of Central Europe.

1620

Religious separatists known as Pilgrims settle at Plymouth in what is today Massachusetts. Before disembarking from their ship the *Mayflower*, the Pilgrims sign the Mayflower Compact, the first document in British North America to espouse the principles of self-government.

1622

The Powhatan Indians attack the colonial inhabitants of Wolstenholme Town, the main settlement of the Martin's Hundred Plantation, downriver from Jamestown, Virginia. Fifty-eight out of approximately 140 settlers are killed, and another twenty are taken prisoner.

1623

Portsmouth, the first settlement in what is now New Hampshire, is founded.

1624

A Dutch colony is established on Manhattan Island.

England, prompted by a failed attempt of Prince Charles to marry the Infanta of Spain, declares war on Spain.

1626

British forces attempt to capture the Spanish port of Cadiz and fail.

1627

British forces, led by the Duke of Buckingham, attempt to intervene on the Île de Rhé, near the beleaguered Huguenot city of La Rochelle, and fail. The English forces were attempting to support fellow Protestants oppressed by the Catholic French King Louis XIII.

1628

La Rochelle, a Protestant stronghold, falls to the forces of the French Cardinal Richelieu after a fourteen-month siege.

The British Parliament passes the Petition of Right, a critical document in the development of rights and liberties for the people of England.

1629

The Massachusetts Bay Company, a joint-stock company, is chartered by the English Crown to settle lands in New England.

1629–1640

In an attempt to rule without Parliament, King Charles I turns to a variety of dubious schemes to raise money without legislative approval. British custom provides that the imposition of taxes requires the consent of Parliament, but Charles I hopes to cover his expenses by other means. War with Scotland finally forces him to call a session of Parliament in an attempt to raise more money.

1630–1643

Fearful of Catholic influence in England and of Catholic military success on the Continent, English Puritans begin to flee to New England in what has been called the Great Migration. They hope to create an ideal Protestant community.

1631

On May 31, Imperial troops sack the Protestant city of Magdeburg, part of the principality of Saxony in present-day Germany, in one of the most brutal atrocities of the Thirty Years' War.

In the Battle of Breitenfeld, Germany, King Gustavus Adolphus of Sweden defeats the Imperial army commanded by Count Johannes Tilly in the first major Protestant victory in the Thirty Years' War.

1632

In the Battle of Lützen, Germany, King Gustavus Adolphus defeats Count Albrecht von Wallenstein in a major setback for Imperial forces. Gustavus Adolphus is killed during the battle.

1633

William Laud becomes Archbishop of Canterbury. Seen by many in England as pro-Catholic, or at least not Protestant enough, Laud persecutes Puritans, causing their migration to New England and sparking events leading to the English Civil War.

Maryland is founded.

1635

Connecticut is founded.

1636

Roger Williams founds Providence in what will later become Rhode Island.

1637–1638

The Pequot War is fought between the English colonists of New England and the Pequot Indians. The colonists crush the Pequot by surrounding their principal village, setting it afire and killing those who attempt to escape.

1638

Colonists from Sweden settle in Delaware.

1639–1640

Charles I's attempts to force the Church of England's *Book of Common Prayer* upon Scotland in the so-called Bishops' Wars provoke staunch resistance. Scottish forces eventually invade northern England and force Charles I to pay an indemnity in exchange for peace.

1640

King Charles I calls the Long Parliament, given its name to distinguish it from the Short Parliament of April and May 1640. Charles I calls both parliaments to help him raise money to put down rebellions by the Scots; the Long Parliament will sit until 1653.

1641

A rebellion in Ireland breaks out in October.

Parliament passes the Grand Remonstrance, a list of grievances against Charles I.

1642

Charles I withdraws from London, and the English Civil War begins between royalist and parliamentary forces.

1643

Parliamentary forces make league with Scottish Covenanters against the king. (The Scottish Covenanters were Presbyterians who pledged to maintain their own form of church government and worship.)

The French army defeats a Spanish army at the battle of Rocroi, France.

1644

The Battle of Marston Moor in England ends in victory for Parliament.

1645

The British Parliament executes William Laud, the Archbishop of Canterbury, and it reorganizes its troops into the New Model Army. This army wins the Battle of Naseby, effectively defeating the royalist cause in the Civil War.

1646

The royalist stronghold of Oxford surrenders. Charles I surrenders to the Scots, who later turn him over to Parliament, ending the first round of the English Civil War.

1648

Charles I allies with the Scots and launches the second Civil War. He is once again defeated. Oliver Cromwell defeats the Scots at the battle of Preston.

The Treaty of Westphalia ends the Thirty Years' War.

1648–1653

A civil war, called the *Fronde*, erupts in France, as aristocrats make a final attempt to preserve their power in the face of growing monarchical consolidation.

1649

King Charles I is tried and executed by Parliament. Executive authority is assumed by Oliver Cromwell, who adopts the title of Lord Protector of the Commonwealth.

1649–1650

Oliver Cromwell and his army conquer Ireland. After capturing the town of Drogheda, they massacre Irish Catholics.

1650

Cromwell defeats Scottish Covenanters at the battle of Dunbar, Scotland.

1651

Cromwell wins the battle of Worcester, in the English Midlands, ending an attempt to bring Charles II to the throne.

1652–1654

The First Dutch War is fought between Britain and the Netherlands over trade and control of the sea lanes of Europe.

1655

English forces capture the island of Jamaica in the Caribbean.

1659

The Treaty of the Pyrenees finally ends the Franco-Spanish conflict that broke out during the Thirty Years' War.

1660

King Charles II takes the throne of England.

1664

The Dutch transfer New Amsterdam to the English, who rename it New York.

1664–1667

The Second Dutch War is another conflict between Britain and the Netherlands over colonies and trade.

1667

The British navy is crushed by the Dutch at the battle of Medway on the English River Thames.

1670

The Secret Treaty of Dover promises French aid to help Charles II retain his throne, if he openly converts to Roman Catholicism.

1672–1674

The Third Dutch War is the final conflict between England and the Netherlands over trade and colonies. Various colonies—including Suriname, some East Indian islands, and New Netherlands (New York)—are exchanged between the two countries as a result of the three wars.

1675–1676

King Philip's War is a brutal war fought in New England between English colonists and Native Americans. While native warriors achieve some success and destroy several colonial towns, the war ends when Metacom, known to the colonists as King Philip, is killed.

1676

Virginian Nathaniel Bacon leads an uprising, known as Bacon's Rebellion, against the colonial government of Virginia. Under Bacon's leadership, poor whites, as well as blacks, attempt to overthrow the wealthy elite who dominate Virginia. The rebellion is eventually defeated.

1678

The Popish Plot, a fictitious but widely believed conspiracy of Jesuits to assassinate King Charles II, is fabricated by an Anglican clergyman named Titus Oates. Dozens of Catholics are executed as a result.

1679

The Exclusion Crisis breaks out as Protestant nobles attempt to block James the Duke of York's succession to the throne.

1681

Pennsylvania is chartered.

1683

The Rye House Plot, an alleged conspiracy by Whig opponents to overthrow Charles II, fails. It leads to the execution of Algernon Sidney, whose *Discourses* will greatly influence the founding fathers of the United States.

1685

King Charles II of England dies and is succeeded by his brother James II.

King Louis XIV of France revokes the Edict of Nantes, leading to widespread violence against the Huguenots and to large Huguenot migrations to the

North American colonies.

The Duke of Monmouth rebels against James II. His forces are crushed at the battle of Sedgemoor, in southwest England, by an army commanded by John Churchill, later Duke of Marlborough. Monmouth's followers are executed or transported to the Caribbean.

1686

Sir Edmund Andros becomes governor of the Dominion of New England and later attempts to seize the charter of Connecticut. Three years later, after receiving word of the Glorious Revolution, the colonists will overthrow and imprison Andros.

1688

In the Glorious Revolution, William of Orange lands in England in November. James II flees a month later.

1689

The Convention Parliament proclaims that James II has abandoned the throne and offers it to William of Orange and his wife Mary, the daughter of James II.

The English Bill of Rights confirms the supremacy of the British Parliament and effectively ends the idea of the divine right of kings in England. After 1689, the power of Parliament will increase.

The Nine Years' War (also called the War of the League of Augsburg), known in America as King William's War, begins, pitting the Dutch and the English against the French and those loyal to James II, known as the Jacobites.

1690

Forces under King William III defeat a Jacobite army in Ireland at the Battle of the Boyne.

A French and Native American force raids Schenectady, New York.

The British capture Port Royal, Acadia (modern-day Nova Scotia).

1691

The French recapture Port Royal, Acadia.

1697

The Treaty of Ryswick ends the Nine Years' War.

c. 1700

In European armies, the flintlock musket and the socket bayonet begin to supersede the old combination of matchlock musket and pike. The flintlock offers a more reliable ignition system for firearms. The socket bayonet allows a soldier to convert his musket into a short pike without sacrificing the ability to fire his weapon. These advances increase the effectiveness of European infantry formations.

1701–1714

The War of the Spanish Succession is fought to prevent Louis XIV from joining the Bourbon Crowns of France and Spain. English, Dutch, and Austrian armies will battle against the French, primarily in the elaborately defended area of the Spanish Netherlands and the northeastern border of France. Fighting also breaks out in Spain and in Austria, and takes place sporadically around the globe.

1702

King William III dies. Anne, daughter of James II, becomes Queen of England.

1704

Anglo-Austrian forces, led by the Duke of Marlborough and Prince Eugene of Savoy, defeat the French at the battle of Blenheim.

British troops capture Gibraltar.

The French and their native allies raid and burn Deerfield, Massachusetts.

1706

Marlborough defeats another French army at the battle of Ramillies. The dazzling victory allows for the rapid conquest of four cities in the ensuing campaign: Ostend, Menin, Dendermonde, and Ath.

1707

The Act of Union, voted on by the parliaments of both countries, formally joins England and Scotland.

1708

Marlborough and Prince Eugene of Savoy defeat the French at the battle of Oudenarde. They follow up that victory by besieging and capturing the French city of Lille, one of the strongest and most elaborately defended cities on the French border.

A British naval expedition seizes Minorca.

1709

Marlborough and Prince Eugene of Savoy win the Battle of Malplaquet, a bloodier and less decisive victory over the French than those achieved earlier in the war.

1710

British colonists capture Port Royal, Acadia (Nova Scotia).

1711

A British naval expedition against Quebec fails.

Queen Anne removes the conservative Duke of Marlborough from his command of the allied army and brings him back to England. Marlborough had been charged with misuse of public funds. His removal is a sign of the waning of Tory power during Anne's reign.

1713

The Peace of Utrecht ends the War of the Spanish Succession.

1714

Queen Anne of England dies without issue, bringing an end to the Stuart dynasty. George I, the first of England's Hanoverian kings, is crowned in order to ensure a Protestant succession.

1715

Unsuccessful Jacobite uprising in Scotland of pro-Catholic supporters of James II, the pretender to the British Crown.

1718

The French found New Orleans on the Mississippi River.

1727

George I dies. George II is crowned King of Great Britain.

1733

Georgia is founded by James Oglethorpe as both a debtor's colony and a bulwark against the threat from Spanish Florida.

1733–1735

The War of the Polish Succession, a general European conflict over who would rule in Poland, leads to more Russian influence in that Eastern European country.

1739

The War of Jenkins' Ear erupts between Britain and Spain. The conflict between the two nations will be subsumed into the larger European conflict known as the War of the Austrian Succession.

South Carolina slaves launch the Stono Rebellion, but fail to win their freedom.

1740–1748

In the War of the Austrian Succession (the American portion is known as King George's War, 1744–1748), much of the fighting takes place in Europe after Frederick II of Prussia's seizure of the rich Austrian province of Silesia.

1741

A combined force of colonial and British troops, transported and supported by the Royal Navy, besieges the Spanish colonial city of Cartagena in South America. Military ineptitude and mosquito-borne illnesses take a heavy toll on the attacking force. The British withdraw without taking Cartagena.

1743

The Battle of Dettingen is the last battle in history in which a British monarch leads national forces into battle. It results in the defeat of the French in the War of the Austrian Succession.

1745

English colonists, with British naval aid, capture Louisbourg, Nova Scotia. The British government will return it to France at the Treaty of Aix-la-Chapelle. The capture of a major fortress was a dramatic coup and a great boon to the colonists' military pride; Britain's willingness to bargain it away in peace negotiations leaves many colonists bitter and resentful.

The Battle of Fontenoy results in a French victory and the conquest of Flanders.

1745–1746

"Bonnie Prince Charlie," Prince Charles Edward Stuart, leads a Jacobite uprising from Scotland. Although the Jacobites briefly invade England, they return to Scotland and are annihilated by the forces of George II at the battle of Culloden on April 16, 1746.

1746

Russia and Austria conclude a defensive alliance.

1748

The treaty of Aix-la-Chapelle ends the War of the Austrian Succession and allows Prussia to keep Silesia.

1754

The royal governor of Virginia dispatches a small force under George Washington to confront French expansion into the Ohio territory. A skirmish between troops led by George Washington and those led by Coulon de Jumonville sparks the outbreak of the French and Indian War (known as the Seven Years' War in Europe, it will last until 1763).

Washington surrenders Fort Necessity, effectively handing control of the Ohio Valley to France.

At the Albany Congress, Benjamin Franklin promotes a plan for a union of the colonies, but he fails to secure approval for it.

1755

British General Edward Braddock's expedition to capture Fort Duquesne is defeated, when the British force marches into a well-prepared French and Native American ambush. Braddock is mortally wounded, and the British army retreats.

The first deportation of Acadians from Nova Scotia by the British takes place.

1756

The French capture Minorca from the British, although they later return it in the Treaty of Paris.

Austrian diplomat Wenzel von Kaunitz completes a diplomatic revolution in Europe by concluding a defensive alliance with Austria's traditional enemy, France.

The Seven Years' War breaks out in Europe, with France, Russia, and Austria facing off against Great Britain and Prussia. The war begins when Prussia preemptively attacks her neighbor Saxony.

1757

A French army led by the Marquis de Montcalm captures the British garrison of Fort William Henry in upstate New York. Montcalm's Native American allies later massacre the garrison as it returns to British territory following the terms of a surrender agreement.

East India Company forces, led by Robert Clive, win a major victory at Plassey, Bengal, India.

1758

The second deportation of Acadians by the British occurs.

French forces under the Marquis de Montcalm successfully defend Fort Carillon on Lake Champlain against a British attack.

The French fortress of Louisbourg, which guards the entrance to the St. Lawrence River and the heart of French North America, falls to a British amphibious force. The British also capture Fort Frontenac, seizing control of Lake Ontario.

The British take Fort Duquesne, in modern-day Pennsylvania, and rename it Fort Pitt.

1759

A large British army commanded by General James Wolfe lands near the French stronghold of Quebec. For several weeks, Wolfe tries to take the city but fails. Eventually, he moves his army upriver of Quebec, engages the French in battle, and defeats them on the Plains of Abraham on September 18. Although Wolfe dies in the battle, the French are compelled to surrender Quebec.

The British capture Fort Niagara.

Major General Jeffery Amherst takes Fort Carillon; the British rename it Fort Ticonderoga.

Amherst captures Fort St. Frédéric; the British rename it Crown Point.

Duke Ferdinand of Brunswick defeats the French at the battle of Minden.

The British win a naval victory at Quiberon Bay off the French coast.

1760

Major General Amherst captures Montreal from the French.

George III becomes king of Great Britain.

1761

French forces in Pondicherry, India, capitulate to the British.

1762

Tsarina Elizabeth of Russia dies. The new tsar, Peter, quickly makes peace with King Frederick II of Prussia. The removal of the Russian threat allows Frederick to escape destruction.

British capture Havana, Cuba, which they later return to Spain in the Treaty of Paris.

British forces capture Manila in the Philippines, but word of the victory does not reach Europe until after the signing of the Treaty of Paris.

1763

The Treaty of Paris ends the Seven Years' War. Britain gains Canada and control of all the land from the Appalachians to the Mississippi, except New Orleans. King Frederick II maintains control over Silesia.

Although the British have crushed the French in North America and India, the war leaves them with a massive war debt. Britain's efforts to tax its American colonies will serve as a major point of friction and contribute to the outbreak of the American War for Independence.

The Proclamation of 1763 forbids British settlers from moving west of the Alleghenies. The measure is intended to stave off future conflict between colonists and Native Americans. It does not achieve that goal, however, and only fuels American resentment of arbitrary British rule.

In the aftermath of the French and Indian War, Native Americans can no longer exploit tensions between the French and the British to their advantage. In Pontiac's Rebellion, Native Americans stage a massive uprising; it will take two years for the British to quell.

1765

Parliament passes the Stamp Act as a measure to raise revenue to help pay off the debt incurred during the Seven Years' War and to support its troops.

Parliament enacts the Quartering Act, forcing colonists to supply food and shelter to British troops. Another money-saving measure by Parliament, the Quartering Act offends colonists as a display of arbitrary rule. To colonists schooled in the standing army debate of the late seventeenth and early eighteenth centuries, troops quartered in private homes are a sign of impending tyranny.

1768

Britain sends two regiments of soldiers to Boston.

1770

British soldiers, harassed by a Boston mob, fire into a crowd of civilians. They kill five colonists and wound others, in an incident that becomes known as the Boston Massacre.

1772

Prussia, Austria, and Russia partition about one-third of Poland.

1773

In the Boston Tea Party, patriots dressed as Native Americans board British ships and throw tea into Boston Harbor to protest taxes.

1774

The British Parliament closes the port of Boston. General Thomas Gage takes command of British troops in Boston.

In Lord Dunmore's War, the royal governor of Virginia leads an expedition into the Ohio River valley against the Shawnee. The Virginians win a major battle at Point Pleasant and then conclude the Treaty of Camp Charlotte with the Shawnee, ending the war.

1775

Boston silversmith Paul Revere's famous ride alerts colonists of an impending British raid into the Massachusetts countryside to seize patriot leaders and weapons. The battles of Concord and Lexington take place the following day, when colonists resist the attempted raid.

Lord Dunmore orders the seizure of the gunpowder stored in Williamsburg's magazine. He also declares he will arm any slave and indentured servants who will fight with him against the nascent rebellion, giving them their freedom in exchange for military service. Later, he and his family flee to a British ship anchored off the Virginia coast.

George Washington receives the appointment as commander-in-chief of the Continental army.

Britain wins a Pyrrhic victory at Bunker Hill, near Boston.

On New Year's Eve, a patriot army, commanded by Benedict Arnold, Richard Montgomery, and Daniel Morgan, assaults the British in Quebec. The attack fails after the colonists suffer grievous losses.

1776

British forces abandon Boston to the Continental army and sail away to the north to regroup and refit.

Washington moves the Continental army south to defend New York City.

The Battle of Long Island takes place. The British victory leads to British occupation of New York City for the duration of the Revolution.

British troops, supported by the Royal Navy, outmaneuver and destroy Washington's army in New York. Washington barely manages to evacuate his troops from Manhattan; he retreats into Pennsylvania.

On Christmas Day, Washington launches a surprise attack on a garrison of Hessian soldiers at Trenton, New Jersey. The Hessians, German mercenaries in the pay of the British, had neglected their defenses in favor of holiday festivities. Washington captures almost the entire garrison, securing a major tactical victory and a much-needed boost to patriot morale after months of defeats.

1777

The British plan a three-pronged offensive to win the war: One force will invade New York from Canada; another will move north from New York City; a third army, commanded by General Sir William Howe, will sail south from New York and move on Philadelphia.

The Battle of Brandywine and the Battle of Germantown lead to the British capture of Philadelphia.

On October 19, the British army in upstate New York, commanded by General John Burgoyne, is compelled to surrender by Continental troops after the British lose the Battle of Saratoga. The American victory at Saratoga inspires the French government to join the war against Great Britain.

1778

In February, France and the rebelling colonies conclude an alliance committing France to support openly the American War for Independence.

British troops capture Vincennes in what is now Indiana.

1778-1779

The War of the Bavarian Succession is fought between Austria and Prussia.

1780

The Battle of Camden, South Carolina, leads to a British victory, giving the British an important base of operations.

Benedict Arnold, now in British service, leads a raid into Virginia, targeting Richmond and Charlottesville and sending Virginia Governor Thomas Jefferson running for safety.

1781

The battle of Cowpens, South Carolina, results in a psychologically important American victory.

French victory in the naval battle off the Virginia cape severs Lord Cornwallis's seaward escape route from Virginia.

The Franco-Colonial siege of Cornwallis's army trapped at Yorktown eventually results in a British surrender. The defeat of Cornwallis effectively ensures the colonists' victory in the American War for Independence.

1783

On September 3, the United States and Great Britain finally sign the Treaty of Paris, ending the American War for Independence.

Mitchell McNaylor

Politics and Government

1492

In August, Christopher Columbus sails from Palos, Spain, on his first voyage of discovery. Approximately two months later, he lands on an island in the Bahamas.

1494

Pope Alexander VI draws a line of demarcation on a map of the New World, splitting the territories between Spain and Portugal.

1499

Following the dismissal of Christopher Columbus, Francisco de Bobadilla is selected to govern Hispaniola.

1512

The Spanish Crown dictates the Laws of Burgos to colonists in the New World. It is the first code of laws to regulate Spanish treatment of the natives.

1519–1523

Hernando Cortéz defeats the Aztecs and consolidates his hold over the valley of Mexico. In 1523, he becomes the official governor of New Spain.

1524

The Council of the Indies, based in Spain, is established to have supreme authority over the Spanish colonies and to administer them.

1527

The first *audiencia* is established in Mexico City, followed by one in Santo Domingo and in other Spanish settlements. These governing bodies are under the authority of the viceroys and are made up of a president, judges, a Crown prosecutor, and lesser officials.

1535

Conquered Mexican territories become the Viceroyalty of New Spain. Hernando Cortéz is selected to lead the colony.

1540

Francisco Vázquez de Coronado leads a Spanish expedition throughout the American Southwest in search of gold, encountering the Hopi and other native peoples. Afterward, Spanish friars and priests set up missions throughout the area.

1542

The New Laws of the Indies are dictated by Charles V to the Spanish colonies, providing better treatment for the natives. The rights granted are judged by the colonists to be too pro-native, resulting in revolt and the repeal of the laws in the Viceroyalty of New Spain and the Viceroyalty of Peru.

1556

Charles V abdicates as ruler of the Netherlands and Spain and as Holy Roman Emperor in favor of his son, Philip II.

1568

In Europe, revolts begin throughout the Low Countries (the Netherlands) against Philip II of Spain.

1570

Five independent tribes—the Cayuga, the Mohawk, the Oneida, the Onondaga, and the Seneca—form the Iroquois League. The League has a confederate structure, which will be influential in the later creation of the Articles of Confederation, because America's founding fathers will study the Iroquois form of government.

1581

The Dutch declare independence from Spain, but Spanish forces continue their attempts to retake the Low Countries.

1584

Sir Walter Raleigh receives a charter from Queen Elizabeth I of England to colonize North America. Raleigh's five attempts at establishing a settlement on Roanoke Island, in what later will become North Carolina, all fail.

1606

King James I of England grants a charter to the Virginia Company to establish a colony in Virginia.

1607

A ship reaches the shores of Virginia carrying 105 colonists from England. They will establish the colony of Jamestown.

1608

A French colony, led by Samuel de Champlain, is established at Quebec.

1609

A Spanish colony is established in New Mexico at Santa Fe.

1613

The Dutch establish a small trading post on Manhattan Island.

1619

The Virginia House of Burgesses, the first legislative assembly to meet in America, conducts its first session at Jamestown. Twenty-two burgesses represent eleven plantations throughout the colony.

1620

On November 11, near Cape Cod, settlers aboard the *Mayflower* sign the Mayflower Compact. This self-government plan for the colony will take effect when the passengers disembark.

The Pilgrims land at Plymouth, Massachusetts, on December 21.

1624

The Virginia Company's charter is revoked, and Virginia becomes a royal colony.

1626

Peter Minuit of the Netherlands purchases Manhattan Island from the Canarsee Indians.

1627

Cardinal Richelieu of France organizes the Company of One Hundred Associates (*Compagnie des Cent-Associés*) in order to settle New France. The new company is given jurisdiction over all French lands between Florida and the Arctic, and the company is granted a monopoly over all trade except for fishing.

1629

King Charles I of England dismisses Parliament and rules as an absolute monarch. As a result, many English subjects leave for the American colonies.

1630

John Winthrop leads more than 900 Puritan colonists to establish Boston in the Massachusetts Bay Colony.

1635

In September, Roger Williams is banished from Salem by the Massachusetts General Court, because his religious views are deemed unacceptable by the Puritans. The following month, Williams is banished from the entire Massachusetts Bay Colony for religious dissent. He will found Providence and the colony of Rhode Island.

1637

In November, Anne Hutchinson is banished from the Massachusetts Bay Colony by the Massachusetts General Court for her heretical beliefs and threat to the Puritan theocracy. She, along with her family and a group of followers move to Rhode Island, where they establish a democratic community.

1641

The "Body of Liberties" legal code, based on the Old Testament, is adopted in the Massachusetts Bay Colony.

1643

The New England Confederation is formed for mutual protection by the colonies of Connecticut, New Haven, Plymouth, and Massachusetts Bay.

1644

A group of eleven slaves successfully petitions the government of New Amsterdam for their freedom.

1647

Peter Stuyvesant becomes director general of the colony of New Netherland, as well as colonies in the Caribbean (Aruba, Bonaire, and Curaçao).

1649

King Charles I of England is beheaded. Oliver Cromwell and his forces begin to assert control over England, Ireland, and Scotland.

Maryland's Assembly passes the Toleration Act, which guarantees freedom of worship and lauds religious tolerance.

1650

The Hartford Treaty is signed, setting a boundary between New Netherland and New England.

1660

Parliament restores the monarchy and Charles II becomes king of England.

The Navigation Act of 1660, the first of many laws governing trade and navigation in the American colonies, goes into effect. It mandates that only English-built ships with crews that are two-thirds English will be allowed to trade with the colonies. Also, mercantilist policies are enacted requiring that certain goods (indigo, sugar, and tobacco) be shipped to Britain only.

1663

King Louis XIV assumes personal control of New France, making it a royal colony.

The charter of Rhode Island incorporates religious freedom.

1664–1674

The Navigation Act of 1663 goes into effect on March 25. It requires that all imports shipped to the British colonies from other countries come through ports in Britain and be transported on British ships.

A British naval squadron accepts the surrender of New Amsterdam, renaming the colony New York. The Dutch recapture the colony briefly in 1673, but it is ceded back to Britain in 1674.

1676

Dissidents—angered by high taxes and low tobacco prices, and resentful of government officials—rebel and begin to raid local Native American tribes. Led by Nathaniel Bacon, the rebellion exposes deep discontent among the colonists. In September, Jamestown is burned to the ground by Bacon and his followers.

1682

William Penn, the founder of Pennsylvania, lands near Chester, Pennsylvania.

1685

The Edict of Nantes is revoked, prompting almost 200,000 Huguenots to leave France for other European countries and the North American colonies.

1687

Throughout the Spanish colonies, leadership posts within the *audiencias* are largely put up for sale, allowing wealthy colonists to participate in the colonies' legislative affairs.

1688

Quakers in Philadelphia pass legislation against slavery.

1690

The first paper money is issued in the colony of Massachusetts, prompted by the need to pay soldiers fighting a war in Quebec.

1700

King Philip V ascends to the throne of Spain. He is the first Bourbon ruler of the Spanish Empire.

1701

William Penn grants the Charter of Privileges to his colony of Pennsylvania. It establishes a unicameral legislature and a policy of religious freedom.

1733

Georgia is settled as a penal colony and a haven for debtors. It is initially established with a ban on slavery.

1735

The printer of the *New York Weekly Journal*, John Peter Zenger, is acquitted on charges of seditious libel. This ruling sets one of the first freedom-of-the-press precedents in the colonies.

1750

The Georgia colony revokes its laws against slavery.

1754

The *Pennsylvania Gazette* contains the first recorded American political cartoon. Created by Benjamin Franklin, the cartoon attacks the fragmentation of the colonists regarding frontier defense.

Delegates from different colonies meet at the Albany Congress to decide upon a common policy toward the Iroquois.

The French and Indian War begins. It is the North American phase of the Seven Years' War in Europe (1756–1763).

1760

King George II dies, and George III ascends to the British throne.

1761

Thomas Hutchinson is selected to be the chief justice of Massachusetts.

British forces in Boston without warrants begin to search colonists' homes for smuggled goods.

1762

Louisiana is ceded to Spain by France as a result of the Treaty of Fontainebleau.

1763

Under the terms of the Treaty of Paris, France cedes its North American territories (Canada and areas east of the Mississippi River) to Britain. This effectively ends the French and Indian War in the colonies.

1764

The Sugar Act is passed by the British Parliament on April 5, placing taxes on foreign sugar, increasing taxes on coffee, indigo, and wines from the island of Madeira, and banning the importation of French wines and rum.

In June, the Massachusetts Assembly creates the first Committee of Correspondence. It works to inform all the colonies about the revolutionary events taking place.

In Britain, the Currency Act is passed on September 1, forbidding the colonies from issuing their own currency.

1765

On March 22, the British Parliament passes the Stamp Act, which requires that goods, documents, and services be notarized and taxed in the American colonies. Revenue from the tax helps to maintain the British armies stationed in America. Three days later, Parliament passes the Quartering Act, which requires the American colonies to provide barracks and provisions for British troops.

In response to the Stamp Act, Patrick Henry issues a diatribe against it at Virginia's House of Burgesses on May 29. He states, "If this be treason, make the most of it." The next day, the House of Burgesses legislates its Virginia Resolves, which attack the Stamp Act because it taxes colonists without representation in Parliament.

On August 28, colonists who are against the Stamp Act burn the records of a vice-admiralty court in Boston.

Delegates from nine colonies meet on October 7 to hold the Stamp Act Congress, which enacts a Declaration of Rights and Grievances. The declaration denounces taxation without representation.

1766

In February, Benjamin Franklin writes an unauthorized letter to the British in defiance of the Stamp Act. The legislature of Georgia also acts in resistance to the Stamp Act; the legislature is subsequently dissolved by the royal governor.

On March 7, the British Parliament passes the Declaratory Act, which states that Parliament has the right to enact laws governing the American colonies. Eleven days later, the Stamp Act is repealed, but Parliament cites the Declaratory Act, stating that all future laws concerning the colonies are lawful.

1767

The Townshend Acts are approved by the British Parliament. These acts place import taxes on manufactured products shipped to America.

1768

American assemblies are forced to disband by British administrators in the colonies.

1769

Thomas Hutchinson takes his new post as governor of Massachusetts.

1770

In February, Alexander McDougall is put in jail for printing subversive flyers in New York.

On March 5, the British military is unable to disperse a mob of colonists in Boston peacefully. The violence that results will become known as the Boston Massacre. Five colonists die and others are wounded.

On April 12, the Townshend Acts, which imposed taxes on certain goods that colonists import, are repealed.

On November 27, the Boston Massacre trials begin to decide the fate of the eight British soldiers and one officer involved in this incident. All are acquitted on the basis of self-defense, except for two privates, who are branded on their left thumbs and released.

1772

On June 9, colonists from Rhode Island attack and burn the Royal Navy schooner *Gaspee* after it runs aground.

1773

The Tea Act is passed by the British Parliament on May 10. It grants the East India Company a monopoly on the tea trade.

On June 5, the Boston Committee resolves to form the Solemn League and Covenant, agreeing to cease all trade with Great Britain.

Committees of Correspondence from Virginia and Massachusetts condemn the Tea Act on October 16.

Patriots, dressed as Native Americans, board British ships in Boston Harbor on December 16. They dump more than 300 crates of tea overboard in protest of the taxes on tea and the East India Tea Company's monopoly on the trade. This event becomes known as the Boston Tea Party.

1774

On January 3, Governor William Tyson of New York enforces the boycott of tea, saying that tea will not land in New York except by "point of the bayonet."

One of the Coercive Acts, the Boston Port Bill, goes into effect on March 31. It orders the closure of Boston Harbor until reparations are made for the tea lost during the Boston Tea Party.

Lord Dunmore, governor of Virginia, dissolves the Virginia House of Burgesses.

General Thomas Gage arrives in Boston to take the position of military governor on May 13.

The establishment of the Quebec Act on May 20 widens the divide between Canada and the American colonies. This act, which attempts to ensure French Canadians' allegiance to the Crown by expanding Quebec's territory, changes the oath of allegiance process for public officials and allows for the practice of Catholicism.

Along with the Quebec Act and the Boston Port Bill, the Massachusetts Government Act (which annuls the Massachusetts Colony's charter and gives the British governor complete authority) and the Administration of Justice Act (which allows the British governor to move trials to another colony or to Britain) are effectively instated. Together, these acts become known as the Coercive Acts or Intolerable Acts.

On June 2, military governor Thomas Gage declares martial law in Massachusetts.

The Continental Congress meets for the first time in Philadelphia on September 5. Joseph Warren of Boston, Massachusetts, calls for a ban on British goods. And the Suffolk Resolves, which attack and void the Coercive Acts by stating that Parliament does not have authority over the American colonies without colonial representation, are adopted.

In October, the Continental Congress passes a Declaration and Resolves stating that only colonial legislative bodies may enact legislation for the colonies. The Congress also enacts the Continental Association in order to suspend commerce with Britain. And it asks colonists to forgo such expensive activities as horse racing, cockfighting, and gambling, in order to concentrate on the current situation.

1775

In January, the City of Philadelphia's Committee agrees to support the Provincial Congress. Governor William Franklin of New Jersey, Benjamin Franklin's son and a staunch loyalist, pleads with the General Assembly of New Jersey to remain associated with the king. The Provincial Congress of South Carolina takes control of the colonial treasury. And the Assembly of New York chooses not to consider measures taken by the Continental Congress.

In early February, delegates from New Jersey state that they will support the king if liberties previously held by colonists are returned. The Second Massachusetts Provincial Congress holds its first meeting in Cambridge; it condemns anyone assisting the British army in and around Boston.

On February 9, the king and Parliament of Britain declare that Massachusetts is in a state of rebellion. Later in February, imports from Pennsylvania are banned in Britain.

Patrick Henry addresses the Virginia Convention on March 23, promoting resistance against Britain. His speech includes his famous statement, "Give me liberty, or give me death."

New York's Colonial Assembly holds its final meeting. General Thomas Gage, royal governor of Massachusetts, is ordered to arrest members of the Massachusetts Provincial Congress on April 14.

On April 19, the American Revolution begins with the engagements at Lexington and Concord, Massachusetts. The famous "shot heard 'round the world" is fired. The Massachusetts' Provincial Congress enacts the creation of a militia.

The first referendum in U.S. history is disapproved when Massachusetts voters vote against their constitution on May 16. Ten days later, the Continental Congress declares a new name for the American colonies, the United Colonies of America.

In June, the Continental Congress approves the creation of a Continental army of around 20,000 troops. George Washington is appointed commander in chief of the Continental army.

On July 6, the Continental Congress approves the distribution of Colonel John Dickinson's *Declaration of the Causes and Necessity of Taking Up Arms*; the document attempts to justify the colonists' right to defend themselves. (Thomas Jefferson originally had composed a similar document, but his version was deemed too militant.)

The Continental Congress's Olive Branch Petition, a last offer to find a solution to the differences between the colonies and the Crown, is sent to the king on July 15. This petition requests that he end his military activities in the colonies. A few days later, the Continental Congress selects delegates to reach agreements with Native Americans.

On August 18, the Provincial Congress of New York suggests that areas around New York City should be fortified. King George III of Britain proclaims the American colonies are rebelling, and he declares the revolt will be put down by force. The *Pennsylvania Gazette* publishes a story that tells how Parliament plans to try rebels from the colonies in England for their offenses.

In September, the Massachusetts Assembly requires that representatives take oaths of allegiance. The Continental Congress establishes a secret committee to deal with spies and espionage in the impending war. King George III officially refuses the requests of the Olive Branch Petition; British military activity in the colonies will continue.

In November, Lord Dunmore, royal governor of Virginia, promises to emancipate slaves who fight for the British and loyalist forces during the war; he also declares martial law throughout the colony. Montreal is occupied by invading American forces, but colonists there are not convinced to join the American

rebellion. On November 28, the Continental Congress enacts the creation of the American Navy; the following day, the Congress establishes a secret committee to control and seek out foreign assistance.

On December 3, the first Navy Jack of the United States Navy is flown aboard the USS *Alfred* on the Delaware River. Five days later, colonial forces led by Benedict Arnold begin the siege of Quebec City, Canada. Later in December, the British Parliament allows for the confiscation of vessels owned by "rebellious" American colonists.

Esek Hopkins is selected to be the first commodore of the American Navy. General George Washington proposes the enlistment of African Americans in the Continental army.

1776

Common Sense by Thomas Paine is published on January 10. The pamphlet supports American independence, attacks the ideas of hereditary monarchies, and describes the future economic benefits of independence. Later in January, the Continental Congress allows for the enlistment of black soldiers.

The Continental Congress authorizes privateering against British ships on March 19. On April 6, it moves to suspend the slave trade and opens all ports to any nation except for Britain.

On May 2, King Louis XVI of France sends military supplies to the American army.

A convention of delegates from all over Virginia vote in favor of independence on May 6; the state's delegates at the Continental Congress are informed to vote that way at the Congress as well. Virginia delegate Richard Henry Lee proposes independence at the Continental Congress on June 7, proclaiming, "These united colonies are, and of right ought to be, free and independent states."

On June 10, the Congress creates a War and Ordnance Board to oversee the military matters of the American colonies. The following day, it appoints a committee to create a draft of the Declaration of Independence; the committee appointed by the Continental Congress selects Thomas Jefferson to compose the first draft.

Also in June, Virginia passes the Declaration of Rights, which guarantees certain rights to citizens and is a precursor to the Bill of Rights. The Continental Congress adopts the predecessor to the modern flag of the United States, containing thirteen red and white stripes and thirteen stars on blue. The Congress starts to print paper money, and it declares that loyalists are guilty of treason against the united American colonies.

On June 27, Thomas Jefferson completes his first draft of the Declaration of Independence. It is read at the Continental Congress the next day.

On July 2, the Continental Congress passes a resolution calling for independence from Great Britain. On July 4, the Declaration of Independence is adopted by the Continental Congress unopposed; it is read publicly for the first time on July 8 in Philadelphia.

On September 9, the United Colonies are renamed the United States by the Continental Congress. On September 20, Pennsylvania approves its Declaration of Rights, which guarantees certain rights and freedoms to the state's citizens, and it ratifies its constitution.

On December 27, the Continental Congress gives General George Washington dictatorial powers to be used during urgent war decisions.

1777

In January, slaves in Massachusetts petition for their freedom before the legislature. The Declaration of Independence is reprinted, containing the signatures of all the signers.

In March, Congress votes to buy blankets for soldiers in the Continental army.

In April, the General Court of Massachusetts votes in favor of a referendum on the state constitution.

Vermont, then a district of New York state, abolishes slavery in July.

On September 19, the Continental Congress is forced to flee from Philadelphia as British troops advance to occupy the city. The Congress reconvenes on September 27 in Lancaster, Pennsylvania. Lancaster serves as the country's capital for three days, after which the capital moves to York, Pennsylvania.

The Articles of Confederation, the United States' first plan of government, is agreed upon by the Continental Congress. The plan will not be completely ratified by the states until 1781.

1778

In early January, France puts forth an offer of alliance with the American states.

In March, the British Parliament agrees to start negotiations with the colonies. Shortly thereafter, France notifies Great Britain about its new alliance with the American colonies. American diplomats in France are officially received by King Louis XVI as allies.

On April 16, British delegates sail for America to offer terms of peace. Congress ratifies the alliance with France in May.

In June, the General Assembly of Rhode Island stops enlisting enslaved blacks.

In July, the Continental Congress adopts the Articles of Confederation. The united colonies are officially referred to as the United States of America for the first time.

In September, Benjamin Franklin is sent to Paris as the American representative to France.

1779

Congress authorizes a \$100 bounty for enlistment in the Continental army.

Thomas Jefferson is elected governor of Virginia.

1780

In March, Pennsylvania passes the Emancipation Act, ending slavery throughout the state.

In August, an American diplomat, sent to negotiate an alliance with the United Provinces of the Netherlands, is captured at sea by the British.

In December, General George Washington writes to Congress requesting money for his suffering army. Meanwhile, the Netherlands ally with the American states in their war against Britain.

1781

In February, Congress legislates the establishment of the departments of Finance, War, and Marine. General Cornwallis proclaims an invitation to loyalists to assist in the suppression of the rebellion.

The Articles of Confederation are officially ratified on March 1, providing the United States with its first plan of government.

A prisoner exchange agreement between the Continental and British armies is signed on May 3 in Pegues Place, South Carolina.

In August, Robert Livingston becomes the first secretary of foreign affairs.

In November, John Hanson is elected to the presidency of the United States, under the Articles of Confederation.

1782

In January, loyalists from the United States start leaving for Nova Scotia, New Brunswick, and the Bahamas. The number of loyalists who leave is believed to exceed 100,000, including over 15,000 slaves.

In June, Congress adopts the country's official seal. The Great Seal of the United States is used by General George Washington on a document authorizing a prisoner exchange with the British on September 16.

In November, preliminary peace terms are agreed upon by delegates of the United States and Britain, signaling the end of the Revolutionary War.

1783

Portugal recognizes the independence of the United States.

U.S. troops threaten to mutiny if they do not receive their back pay.

On September 3, the Treaty of Paris is signed, officially ending the Revolutionary War.

General George Washington gives his last orders to the Continental army on October 2; the army is disbanded a month later. In December, General George Washington resigns from his post as commander in chief of the Continental army and returns to his home at Mount Vernon, Virginia.

1784

In January, the legislature of Connecticut enacts a program of gradual emancipation.

Later in January, Congress approves the Treaty of Paris, in which Great Britain recognizes the independence of the American states.

In February, trade with China officially opens when the *Empress of China* sails from New York to Canton.

In April, Native Americans, supported by the British, raid and pillage settlements throughout the Ohio Valley in violation of the Treaty of Paris. Congress prohibits slavery in the Northwest Territory.

In July, amendments to the Articles of Confederation are rejected by Rhode Island legislators.

In August, a group of counties in North Carolina attempts to secede from the state, but their calls for statehood are refused by Congress.

In October, slaves who fought during the Revolutionary War for the Continental army are emancipated in Virginia.

In November, the United States agrees to a peace treaty with the Iroquois.

Congress moves the nation's capital to New York City on December 24.

1785

John Adams voices his concerns over Britain's failure to comply with the Treaty of Paris and demands that Britain withdrawal from American soil.

Thomas Jefferson proposes a standard national currency system. A few days later, the Mount Vernon Conference on interstate navigation and commerce is held. It proves a precursor to the conventions that will eventually abandon the Articles of Confederation.

1786

Virginia adopts Thomas Jefferson's Statute for Religious Freedom, which establishes that religious beliefs are solely the individual's concern and that a separation between state and religion should exist.

Congress approves the dollar as the monetary standard.

The Annapolis Convention (a precursor to the Constitutional Convention the following year) is called to reform interstate trade regulations.

1787

Massachusetts farmers led by Daniel Shays attempt to take over an arsenal at Springfield, Massachusetts, on January 25, but they fail. The group, angered by a lack of paper money, high taxes, and fear of debtor's prison, leads a short rebellion, which forces many people to view the Articles of Confederation as an inefficient and problematic governmental system.

In February, the Continental Congress calls for another meeting in May to revise the Articles of Confederation. In May, delegates convene in Philadelphia to discuss the revisions; George Washington is elected to preside over the Constitutional Convention. Edmund Randolph presents the Virginia Plan to the Convention, calling for a bicameral legislature with representation based upon population.

On July 13, Congress, still under the Articles of Confederation, passes the Northwest Ordinance, which proposes Congress's eventual creation of three to five states in the Northwest Territory.

In September, Elbridge Gerry and George Mason put forward a proposal on the topic of a bill of rights. Thirty-nine of forty-two delegates who attended the Constitutional Convention in Philadelphia sign the Constitution of the United States, and it is sent to Congress for approval. Congress reaches an agreement to send the Constitution to the states for ratification on September 28.

On October 27, Alexander Hamilton, James Madison, and John Jay publish the first of their Federalist Papers in a New York newspaper. The essays argue for the passage of the Constitution.

Delaware ratifies the Constitution on December 7; it is the first state to do so. Pennsylvania ratifies the Constitution on December 12, and New Jersey does so on December 18.

1788

More states ratify the Constitution: Georgia (January 2), Connecticut (January 9), Massachusetts (February 6), Maryland (April 28), South Carolina (May 23), and New Hampshire (June 21). Although Rhode Island had voted against ratification (April 24), the required number of states to approve the Constitution has been reached.

On July 2, Congress is notified that the Constitution has achieved the required number of state approvals for ratification.

On August 2, North Carolina's first attempt to ratify the Constitution fails.

The last session of Congress under the Articles of Confederation is held on October 12.

1789

In February, Delaware prohibits slavery. Electors unanimously vote George Washington to power as the first president of the United States under the Constitution.

In March, the new national government under the Constitution goes into official operation.

George Washington states that becoming president is like "a culprit going to the place of his execution." He is inaugurated as the first president of the United States at Federal Hall in New York City on April 30.

Arthur Holst

58,000–10,000 b.c.e.

Groups of Paleo-Indians migrate into the Americas, most likely from Asia, though other theories exist as to their origins. Over time, they begin to differentiate into regional subcultures. These are the distant ancestors of colonial-period Native Americans.

750–1550 c.e.

The Mississippian culture, with major cities at Cahokia (near present-day East St. Louis), Spiro, and Natchez, dominates the eastern half of North America. By 1100, Cahokia is home to a complex, stratified society of 20,000 people. In the Southwest, by roughly 1250, a people known as the Anasazi have constructed twelve large towns and hundreds more villages, constituting a formidable trading empire.

1492

Christopher Columbus, a Genoan sailing for King Ferdinand and Queen Isabella of Spain, reaches San Salvador in October and inaugurates a new era of contact—and conflict—between ethnic groups. Columbus immediately begins to search neighboring Caribbean islands for gold and treasure; he also enslaves several of the Taino people he encounters.

1494

The Treaty of Tordesillas divides the New World between Spain and Portugal, the preeminent naval powers of the fifteenth and sixteenth centuries.

1510

The Spanish bring the first African slaves to Española (Hispaniola). Europeans have been enslaving Africans for decades on sugar-producing islands off the coast of Africa and in the Mediterranean, but this marks the earliest stages of the transatlantic slave trade, which will disrupt millions of lives on three continents.

1513

Juan Ponce de León, allegedly in search of the “fountain of youth,” but more likely in search of gold and slaves, lands near present-day Daytona Beach and names the “island” he believes he has landed on Florida. Ponce de León's first meeting with Native Americans is an attack the Spanish suffer at the hands of Ais Indians. Ponce de León's fleet continues up the west coast of Florida, where it meets resistance from the Calusa Indians. Following Hernando Cortéz's encounter with the Aztec, Ponce de León returns to Florida in 1521 and begins constructing buildings in a location lost to history. He is shot, and dies of his arrow wound in Cuba.

1521

Relying on superior technology, surprise, disease, and an alliance of anti-Aztec native peoples, Cortéz conquers the Aztec Empire of central Mexico. In the major battle of the campaign, Cortéz's army lays siege to the Aztec capital at Tenochtitlán (a city of 200,000; Seville's population at the time was 70,000). The Spanish capture, hold hostage, and eventually execute the ruler Montezuma II. They also feed the surviving Aztec priests to the Spanish war dogs.

1534–1541

In the Northeast, Jacques Cartier travels up the St. Lawrence River, trading and establishing generally friendly relations with that region's Native American population.

1539–1543

Hernando de Soto's *entrada* into what is now the southeastern United States represents one of the earliest Spanish attempts to explore and exploit the region. De Soto and a column of about 600 men travel through the Southeast in search of gold and treasure. His routine involves taking leading Native American men hostage and holding them in exchange for provisions, women, and safe passage through hostile territory. De Soto eventually falls ill and dies; his body is allegedly sunk in the Mississippi River. Half of his expeditionary force limps back to Mexico.

1540–1542

Francisco Vázquez de Coronado invades what is now the southwestern United States in search of the Seven Cities of Gold, legendary cities of fabulous wealth. The Pueblo Indians, upset with Spanish rape and plunder, first revolt, then send the Spanish farther north with rumors of gold and silver. Coronado's army reaches as far north as present-day Kansas; realizing that no gold is to be found in the region, the Spanish return to punish the Pueblos again.

1565

Spanish and French forces clash on Florida's Atlantic Coast. Pedro Menéndez de Avilés defeats French Protestant forces under Jean Ribaut, and France gives up its claim to Florida. St. Augustine is founded.

1587

Backed by Sir Walter Raleigh, Governor John White and 115 men, women, and children arrive at Roanoke (off the coast of North Carolina) in the

summer. Virginia Dare is born; she is the first English child born in North America.

John White returns to England for supplies. By the time of his return in 1590, the colony has disappeared. White discovers destroyed buildings, a ransacked fort, and the word "Croatoan" scratched into one of the stockade posts. Though search parties look for the colonists in the late sixteenth and early seventeenth centuries, they are never found. Various theories about the colonists' disappearance are that they were assimilated into local tribes, killed by local native peoples, or killed during the Powhatan's conquest of the area in the early 1600s.

1598

Don Juan de Oñate crosses the Rio Grande at the site of present-day El Paso and begins the formal colonization of New Mexico. When he reaches present-day Albuquerque, which the Spanish call Santo Domingo, he addresses the assembled leaders of the Pueblo people. Oñate explains the benefits, both secular and religious, of submitting to the Spanish, and all of the leaders agree that they will submit.

The Spanish set up their headquarters at a Tewa pueblo they call San Juan, forcing the Indians to provide them with housing, labor, food, and clothing. The Spanish and Pueblo people remain crowded together in the area until about 1608, when Oñate starts to move the capital to Santa Fe. Oñate also seeks a route to the Pacific Ocean and manages to reach the Gulf of California in 1604 or 1605.

The Pueblos of Acoma attack the Spanish, killing eleven colonists, including Oñate's nephew. In retaliation, Oñate's forces attack Acoma, killing 500 men and 300 women and children. He also takes about 80 men and 500 women and children captive; their punishments range from terms of servitude to maiming.

1607

Settlers at Jamestown establish the first permanent English colony in North America. Relations with the Powhatan people are peaceful at first, as the English pose no immediate threat to the natives. Poor preparation and a poor location (in a swamp) cause much grief to the English, as more than half of the original settlers die.

1608–1627

Samuel de Champlain, continuing his earlier efforts, founds the colony of New France when he secures the alliances of a number of native peoples and builds a fortified trading post at Quebec in 1608. In 1609, the French and their allies battle the Iroquois.

By 1627, only eighty-five men will live at Quebec. French interest in New France remains low, although a handful of Jesuits and fur traders make inroads in the Northeast and Great Lakes regions.

1610–1614

A series of conflicts subsequently known as the Anglo-Powhatan Wars begins in Virginia. These pit the newly arrived English colonists against a group of Native Americans led by a chieftain named Powhatan. The wars are actually more of an extended series of raids, which break out as the English move beyond their stockade at Jamestown and press the Powhatan to supply them with corn.

1614

Pocahontas, a daughter of Powhatan who had been held captive at Jamestown, marries John Rolfe, an English planter. The intercultural marriage brings about a brief period of peace between the English and Powhatan.

1619

The first shipment of Africans arrives in mainland North America when a Dutch ship unloads twenty "Negars" at Jamestown, Virginia. Although their legal status is not precisely clear, and some of them do end up serving out indentures and being freed, the majority of Africans in Virginia during the colonial period are slaves.

1620

The Pilgrims, religious refugees from England by way of the Netherlands, land at Plymouth, in present-day Massachusetts. Squanto, a Wampanoag translator and guide, aids the colonists and helps to ease tensions between the English and Massasoit, the local Pokanoket sachem.

1622

Ever-expanding English settlements in Virginia prompt Opechancanough (Powhatan's brother, who replaced him as leader of his people) to launch an attack on outlying settlements. The attacks are an astonishing success, killing 347 English colonists, although Opechancanough does not pursue the fight back to Jamestown. The retaliatory strike by the English is equally vicious and many Powhatan people are killed. The end result of this conflict is that new areas are open for white settlement.

1632–1649

French Jesuits establish missions and convert Hurons in present-day Ontario. The Huron, and other native peoples, accept baptism on their own cultural terms, and many add the Europeans' God to their spiritual understanding of the world. The priests' records, published as *The Jesuit Relations*, will become indispensable tools for historians and anthropologists seeking to reconstruct North America's native past.

1636

Roger Williams, banished from the Massachusetts Bay Colony in 1635, founds Providence, Rhode Island. Williams advocates tolerance of Native American religions and the purchase of Indian land.

1637–1638

Ostensibly upset over the killing of trader John Stone (who had been banished from the Massachusetts Bay Colony), the United Colonies of New England send a force to punish the Pequot of the Connecticut River Valley. In the main action of the Pequot War, the English and their Narragansett and Wampanoag allies set fire to a major village on the Mystic River (also known as Mystic Fort). As the village burns, Pequot noncombatants, mainly old men, women, and children, run for their lives, only to be put to the sword by the English. Estimates of the dead range from 400 to 900; the native people who survive are sold into slavery. By the terms of the treaty that stops the fighting, the Pequot are forced to submit to the English in every way, and their tribe is effectively dissolved.

1641

Massachusetts is the first North American colony to officially recognize African slavery and give it legal sanction. By the end of the colonial period, slavery exists in all thirteen of Great Britain's North American colonies, whether in the North or the South.

1644

Opechancanough, leader of the 1622 attack on Virginia, strikes the English again. This fighting results in a treaty between the two groups, although the treaty will be rendered meaningless in the decades to come, as tens of thousands of English settlers flock into Powhatan territory.

Also in 1644, eleven African slaves in New Amsterdam petition for their freedom. The Council of New Netherland frees the slaves, since they have served the colony for an extended period of time.

1649

Weakened by disease and famine, the Huron villages of Ontario are all but destroyed by Iroquois war parties in a series of conflicts known collectively as the Beaver Wars. The surviving Hurons join other villages throughout the Great Lakes, and many Hurons are adopted into the villages of their former enemies, the Iroquois.

1651

Anthony Johnson, a free African (one of the original black settlers at Jamestown), receives 250 acres of land in Northampton County, Virginia. Johnson becomes master of his own plantation. Though this will never be common, it happens more often in slavery's early years. As the seventeenth century progresses, white Virginians turn increasingly to African slavery and begin to divide their society sharply along racial lines.

1662

A Virginia law mandates that children should follow the condition of their mother; therefore, the children of slaves become slaves.

1664

Maryland enacts a law preventing miscegenation between Africans and English people. Other colonies add similar laws throughout the colonial period, reflecting a fear of race mixing.

1674–1677

During this three-year stretch, the English and the Iroquois come to an agreement known as the Covenant Chain, through which each group can increase its power. The Iroquois receive special trade privileges from the English so long as they remain allied to the English and provide security against the Algonquin. The Covenant Chain benefits both the English and the Iroquois but spells disaster for Native American peoples who are not part of the chain. The Iroquois step up raids, particularly in the Illinois country.

1675–1676

King Philip's War rages in New England. King Philip, a native leader also known as Metacom, upset with biased colonial policies and the encroachment of English farm animals in Wampanoag hunting lands, begins a series of raids, which soon escalate into full-blown war. Other Native Americans, not necessarily acting in concert with Metacom, succeed in destroying several English towns and pushing the line of settlement back. The tide of the war turns dramatically when the Mohawk join the side of the English (thanks to their relationship with New York), and the Iroquois's participation is another major factor in deciding the war for the English. Metacom and his allies are fighting on two fronts, and, in 1676, Metacom himself is shot by a fellow Native American, acting on behalf of the English.

1676

Nathaniel Bacon, one of the wealthiest planters in Virginia, heads a rebellion against Native Americans and his cousin, Governor William Berkeley. Fighting erupts when a party of Doeg Indians begins raiding white farms on the James River as retaliation for crooked trading practices. Bacon takes

matters into his own hands and slaughters a group of Susquehannocks, who have been allied with Virginia for decades.

1680

The Pueblo, chafing under Spanish civil and ecclesiastical authority, rebel. Led by Popé, a Tewa who suffered physical abuse at the hands of the Spanish, the Pueblo lay aside traditional rivalries in order to cast off the Spanish. The Spanish who survive the initial attack hole up at Santa Fe, where they face a numerically superior Pueblo army. The Spanish are able to fight their way out of Santa Fe, although they have to retreat all the way to the present site of El Paso, Texas. The Pueblo kill 200 of the 1,000 Spanish colonists and half of the forty or so priests. This is one of the greatest setbacks the native peoples have yet inflicted on European colonization in North America. New Mexico reverts to Pueblo control for more than a decade.

1682

William Penn founds the colony of Pennsylvania as a refuge for Quakers fleeing persecution in England. Penn, through intermediaries, establishes peace with the Lenni Lenape (called the Delaware by the English) and other smaller tribes.

Eventually, the Quaker colony is surrounded by a ring of Native American groups that have migrated from as far away as South Carolina. Though Penn has practical reasons for this—namely, his desire to protect his colony against Iroquois and French attacks, he also makes a point of purchasing Native Americans' lands, and word of Pennsylvania's fair treatment of natives spreads. The period between the 1680s and the 1740s comes to be known as the "Long Peace."

Mary Rowlandson, who was held captive by Native Americans after a raid on Lancaster, Massachusetts, during King Philip's War, publishes *The Sovereignty and Goodness of God*, the first and most popular example of a genre known as "captivity narratives."

1688

In the Germantown Protest, a group of Pennsylvania Quakers denounces slavery and the slave trade at one of their monthly meetings.

1699

Virginia passes a law declaring that free African Americans are required to leave the colony, but the law generally goes unenforced.

1700–1701

The Iroquois establish peace with both France and Britain. They will continue to play the two powers off each other until the late stages of the French and Indian War, when trading ties and the diplomacy of Sir William Johnson, coupled with British military success, force them to abandon the French and ally themselves with the English.

Also in 1701, John Lawson, officially the surveyor general of the young Carolina colony, travels extensively in the Southeast. His *New Voyage to Carolina* spurs English interest in the region.

1708

A small slave revolt takes place on Long Island; seven whites are killed. For their role in the uprising, two African American male slaves and a Native American slave are killed, and one African American woman is burned alive.

The African population of South Carolina surpasses the colony's white population. Slaves are used for a variety of tasks, but they are most concentrated in rice production.

1711

Fed up with unscrupulous traders and the establishment of a German and Swiss colony at Neuse-Bern (present-day New Bern, North Carolina), the Tuscarora Indians attack English farms, killing over 100 colonists. North Carolina, already weak and sparsely settled, requests help from its neighbors. South Carolina responds by sending two expeditions; both are led by white men but consist largely of Native Americans (Yamasee, Creek, Cherokee, and Catawba). In 1713, Captain James Moore's army storms the main Tuscarora town of Nooherooka, killing hundreds. Moore's force kills 166 male captives deemed unsuitable for slavery and sells about 400 women and children into slavery. In the aftermath of the war, most Tuscarora leave North Carolina for the Northeast; once there, they become the Sixth Nation of the Iroquois in 1722.

1712

A slave revolt grips New York City. Nine whites lose their lives, and twenty-one slaves are executed.

1715

On Good Friday, the Yamasee and Creek attack plantations and farms outside of Charles Town, South Carolina, killing about 400 colonists. They were driven to anger by continuing white encroachment, crooked traders, and extensive slave raids. Most of the English people in the colony retreat to the vicinity of Charles Town. Eventually, the Yamasee run low on firearms, and the fighting slows. Carolina also recruits Cherokees, along with some Catawbans and Tuscaroras, to fight Yamasees and Creeks. By 1717, the English have made a peace treaty allowing the Yamasee to keep the lands west of the Savannah River (today the border between South Carolina and Georgia) and keeping white settlement to the east.

1720–1735

The French wage a series of genocidal wars against the Fox Indians of Wisconsin and Illinois. Their goal is to annihilate the Fox people entirely.

1730

The township of Natick, Massachusetts, formerly a “Praying Town” set aside for Native Americans, is taken over by white settlers.

1732

South Carolina attempts to ban the import of African slaves. Planters are fearful that a substantial black majority will lead to a slave uprising and the loss of life and property.

1733

Georgia is founded by a group of high-minded Englishmen. The trustees initially forbid slavery within the colony, fearing its effects on white working men. By the 1750s, however, Georgia's settlers have basically replicated South Carolina's society, which continues to be built on African slave labor and plantations.

1737

Pennsylvania fraudulently acquires 1,200 square miles of territory formerly belonging to the Lenni Lenape; this is known as the “Walking Purchase.” The Lenni Lenape agree to sell as much land to the colony as a man could walk in a day and a half. William Penn's sons send scouts ahead to blaze a trail, and set up a relay team of walkers who race about 60 miles into Lenni Lenape territory.

The Lenni Lenape find themselves caught between hostile Iroquois and Pennsylvania forces. Penn's “Long Peace” and the dream of harmonious race relations have ended.

1739

A group of approximately sixty African slaves takes up arms against their masters outside of Charles Town, South Carolina. Led by a slave known as Jemmy (some sources spell the name Jemy), a group comprised primarily of Angolans strikes out for the Spanish colony at St. Augustine, Florida, and freedom. Along the way, the rebellious slaves kill about twenty whites, although they spare a shopkeeper known to be kind to his slaves.

The suppression of this rebellion, which later would become known as the Stono Rebellion, is quick and the revenge ruthless. The colony's militia captures the rebels and decapitates the leaders, placing their heads on pikes, one per mile, on the road from the battlefield to Charles Town. After the Stono Rebellion, a new, harsh slave code is enacted; this code becomes the model for other Southern colonies farther west.

1741

City leaders in New York uncover what they believe to be a “Great Negro Plot.” Africans, by this time, approximately one-fifth of the city's population, reportedly intend to burn New York City and kill all of its white residents. One hundred fifty-four blacks and twenty-four whites are arrested in the conspiracy.

1742

The Cherokee and Iroquois sign a peace treaty, putting a halt to many years of mutual raiding and competition for resources.

1751

The Catawba and the Iroquois agree to a peace treaty at Albany, New York. The Iroquois Confederation (the Cayuga, the Mohawk, the Oneida, the Onondaga, the Seneca, and the Tuscarora) has become the major Native American power brokers in eastern North America.

1754–1763

During the French and Indian War, the American theater of the Seven Years' War, the British and French vie for control of North America. Initially, the British fare poorly, suffering humiliating losses at Fort Duquesne and along the frontier, where French-allied natives torment colonists. Eventually, under the leadership of William Pitt, the Elder, the British pump more money and supplies into the war effort. Sensing a British victory, the Iroquois break their policy of neutrality to join the English. The war ends with a massive victory for the English, and the French abandon North America altogether.

Concurrent with the larger French and Indian War, white Carolinians, from 1759 to 1761, incite an ineffective war against the Cherokee, a powerful interior nation of Native Americans.

1763

Native Americans throughout the Ohio River Valley and the Great Lakes region follow the lead of Pontiac, an Ottawa leader, and rebel against the English. Native Americans seize all but two of the British forts in the West. Eventually Pontiac loses what influence he had been able to build. He is killed in 1769 by a Peoria man.

1770

Anthony Benezet, a Philadelphia Quaker, opens a school specifically for African Americans.

1775

African Americans are officially excluded from the Continental army. The Continental Congress approves the measure. Lord Dunmore, British governor of Virginia, proclaims that all slaves who leave their masters to serve the British will receive their freedom. It is unclear exactly how many slaves take him up on this offer. Worried about Dunmore's proclamation, General Washington changes his mind and allows his officers to enlist free black soldiers and sailors.

1776–1783

One of Thomas Jefferson's earliest drafts of the Declaration of Independence accuses King George III of carrying out the slave trade and inciting slaves to revolt. The section concerning slavery, which Southern delegates find repugnant, is stricken from the document.

The American War for Independence presents a new set of challenges to African Americans and Native Americans. Native Americans, fearing that an American victory will mean further dispossession, for the most part side with the British. In the aftermath of the war, it matters little to the fledgling American republic which side Native Americans chose. The whites mostly believe that the native peoples have no place in American society.

Many African Americans find their freedom as a result of the War for Independence. Some join British forces, some simply leave for Canada, and others join the Americans. Those who fought for both the British and American sides are granted their freedom.

In the North and upper South, particularly in Maryland and Virginia, some masters, living up to their revolutionary ideals, manumit their slaves. The experience of slaves in the Deep South, however, changes little, whether one's master had been patriot or Tory.

Matthew Jennings

Religion

Prior to the Arrival of Europeans

Before native peoples encountered Europeans in the Caribbean and beyond, they had created remarkably diverse and complex systems of belief. Some major differences between European and native religions would lead Europeans to disparage native worldviews and even dismiss them as the work of the devil.

In many native cultures, particular places were extraordinarily sacred, and the way things were arranged in space was extremely important. Certain lakes and mountains possessed great spiritual power for groups that lived near them. European faiths, based on a linear concept of time, were transferable across great distances. Early Europeans who came to the New World, generally speaking, would be unable to grasp the intimate connection between the natural and supernatural worlds that was a hallmark of many Native American belief systems.

1492

Native Religions in North America: Before—and after—native peoples encountered Europeans in the Caribbean and beyond in the earliest moments of colonization, they created remarkably diverse and complex systems of belief. Some major differences between European and native religions led Europeans to disparage native worldviews and even dismiss them as the work of the devil.

In many native cultures, particular places were extraordinarily sacred, and the way things were arranged in space was extremely important. Certain lakes and mountains possessed great spiritual power for groups that lived near them. European faiths, based on a linear concept of time, were easily transferable across great distances. Early Europeans, generally speaking, were unable to grasp the intimate connection between the natural and supernatural worlds that was a hallmark of many Native American beliefs.

1537

Bartolomé de las Casas, an early defender of native people and critic of Spanish atrocities, is vindicated when Pope Paul III issues *Sublimis Deus*; this papal bull declares that Native Americans are human beings, and, as such, are not to be enslaved. The slavery of indigenous peoples slowly ends, but the *encomienda* system of natives being forced to labor for Europeans will continue.

1565

In a particularly vicious attack, Pedro Menéndez de Avilés eradicates a small colony of French Protestants settled near the St. John's River in northern Florida. Although the French ask for clemency, Menéndez executes the men, sparing only a handful who pledge allegiance to the Catholic Church.

1584

In consultation with Sir Walter Raleigh, Richard Hakluyt the Younger lays out a plan for English colonization. Hakluyt and Raleigh stress the necessity of spreading Protestant Christianity to counter the teachings of Rome, which have been spread by Catholic explorers and missionaries.

1595

Natives on St. Katherine's Island (off the coast of Georgia) rebel against their Spanish missionaries, citing the friars' complete disregard for their indigenous religion.

Don Juan de Oñate begins the Spanish colonization of New Mexico. Friars accompanying his expedition establish several missions among the Pueblo Indians and write scathing indictments of Oñate's treatment of the native peoples.

1607

The first Anglican parish is formed at Jamestown, Virginia. Richard Hakluyt is named honorary rector.

1614

Alexander Whitaker, rector of the second Anglican parish in Virginia, at Henrico, performs marriage rites for John Rolfe, a planter, and Pocahontas, the daughter of the paramount native chief, Powhatan.

1619

The newly formed Virginia House of Burgesses takes initial steps toward establishing the Anglican Church as the official church of Virginia. Establishment means that the Anglican Church would be the only legally sanctioned church and would be supported by taxpayers' money. Throughout the seventeenth century, a severe shortage of clergy will plague the Anglican Church in most parts of colonial America.

Also in 1619, the first Africans arrive in Virginia on a Dutch slave ship. They are the first of around 400,000 Africans eventually transported to British North America. The slaves come from a variety of religious backgrounds, including Christianity, Islam, and a number of local and national religions.

1620

The separatist Pilgrims arrive at Plymouth under the leadership of William Bradford. The original 102 passengers on board the *Mayflower* are religious refugees. Dismayed at what they viewed as the liturgical excesses of the Church of England, they had left England for Leyden, Holland, in 1607. After several years, concerned that their children were beginning to adopt the Dutch language and culture, they decided to embark for the New World.

The Pilgrims' sparsely populated colony in Plymouth will remain independent until 1691, when it will be subsumed under the new charter of the much larger Massachusetts Bay Colony.

1625

Jean de Brébeuf, a Jesuit missionary to New France, arrives in Huron territory. There, he will labor for more than a decade, learning the Huron language and culture, despite his minimal success in securing converts to the Catholic faith. Brébeuf will be captured by the Five Nations of the Iroquois during the wars of the 1640s and slowly tortured until he dies.

1629

The Dutch Reformed Church is established as the official church of New Netherland. In theory, this precludes any other churches from gaining a foothold in the colony; in practice, as in Amsterdam, the proscription is barely enforced, because the company charged with settling the area does not want to drive off potential colonists.

Peter Stuyvesant, who guides the colony through the 1660s, will not approve of such lax policies. His harsh treatment of a group of Jewish settlers and a Quaker who had been holding secret meetings in his home will earn Stuyvesant stern rebukes from the management of the Dutch West India Company.

1630

The first wave of the Puritan Great Migration arrives in Massachusetts. This movement will transplant tens of thousands of English Dissenters to New England. Immediately, the Saints, as they call themselves, attempt to set up a godly community under the leadership of John Winthrop. Winthrop's "Modell of Christian Charity" speech, delivered onboard the *Arabella*, encourages the Puritans to set an example, to act as "a city upon a hill," in order to correct the excesses and corruption of the Church of England. Continuing persecution of Puritans by Archbishop William Laud and others in England swells the colony's population.

1632

King Charles I grants Maryland to Cecilius Calvert, Second Lord Baltimore. Calvert, the owner of the first proprietary colony in English North America, intends his Chesapeake claim to serve as a safe haven for displaced English Catholics. He invites both Catholics and Protestants to move to his colony and instructs Catholics to conduct their rites as privately as possible to preserve harmony among the colonists.

In the early 1640s, Protestants will seize control of the government and expel the Jesuits, but lawful authority will soon be restored. Maryland's 1649 Toleration Act (England would pass a similar measure half a century later) guarantees all Christians the right to worship as they see fit. In 1655, William Claiborne, a Protestant rebel, will gain control of Maryland and bar Catholics from office; by 1660, Calvert's authority will be restored. Even as Anglican planters rise to dominate the colony in the eighteenth century, Maryland will remain the focal point of Catholicism in the colonies.

1635

Roger Williams runs afoul of the authorities in Massachusetts Bay Colony by preaching a radical separatist message and questioning the right of an English king to deed what is essentially native land to the Puritans. He is banished, but, following a warning from John Winthrop, Williams escapes and eventually establishes the colony of Rhode Island.

Founded on the principle of religious toleration, Rhode Island soon becomes a haven for exiles from Massachusetts Bay. Government in Rhode Island will be totally separate from religion, except to restore order should religious quarrels arise. Not surprisingly, Sephardic Jews will find Rhode Island's tolerant religious climate to their liking and begin to migrate there in the seventeenth century.

1636

Harvard College is founded in Cambridge, Massachusetts. Education is of primary importance to the Puritans, and this is true not only of Biblical instruction. Students at Harvard must know Latin and Greek upon matriculation, and their curriculum stresses knowledge of the Greek and Roman classics, as well as the traditional arts and sciences.

1637

The Antinomian Controversy rocks the religious establishment in the Massachusetts Bay Colony. Anne Hutchinson, a knowledgeable interpreter of Scripture, is charged with accusing Puritan ministers of preaching a covenant of works (as opposed to a covenant of grace) and with other censored behavior. She is banished and moves first to Rhode Island and then to Long Island, where she and most of her family lose their lives in a native attack.

1638

A small community of Swedish Lutherans settles at the site of present-day Wilmington, Delaware, where they establish a colony known as Fort Christina and a church (known today as "Old Swedes' Church").

1641

A band of Ojibwe invite Isaac Jogues, a Jesuit who had arrived in Quebec in the 1630s, to establish a mission among them at Sault Sainte Marie. On a trip to Quebec, Jogues is captured by the Iroquois. He will later be released and return to France. In 1646, after returning to North America, Jogues finally achieves martyrdom for trying to convert Native Americans, when he dies at the hands of a Mohawk war party.

1673

Jacques Marquette, a long-serving Jesuit fluent in several Native American languages, and explorer Louis Jolliet travel the Mississippi River in search of a way to the Pacific. Their explorations form the basis for France's claim to the vast Mississippi River Valley.

1676

Kateri Tekakwitha, the daughter of an Iroquois chief and an Algonquin Christian mother, also known as the "Lily of the Mohawks," converts to Christianity at the age of 20. She quickly gains fame by depriving herself of food, wounding her flesh, and praying constantly. She will die in 1680 and will be beatified by Pope John Paul II 300 years later.

1680

In response to a crackdown on indigenous religious practice and increased efforts at conversion, the Pueblo peoples, under the leadership of the shaman Popé, rise up against and nearly vanquish the Spanish in New Mexico. The surviving Spaniards flee to El Paso and points south, while New Mexico reverts to native control for a decade.

1682

Pennsylvania is established on the Delaware River by the wealthy Quaker William Penn as a haven for his co-religionists. Quakers have been widely persecuted in both England and New England for their radical beliefs. Penn's liberal 1682 Frame of Government declares a policy of religious toleration and respect for local tribes as well. In this way, Penn hopes to set his "holy experiment" apart from the failures that have wracked other English colonial projects.

The capital, Philadelphia, will remain under Quaker control for several decades, while the western portion of Penn's huge land grant will be settled mainly by Presbyterians, Lutherans, and members of the German Reformed Church.

1685

King Louis XIV of France revokes the Edict of Nantes, suspending the rights of French Protestants, or Huguenots, to practice their religion. About 500 Huguenots, many of them skilled at various trades, will move to Carolina (then constituting both North and South Carolina) by 1700 as a result.

1690

Father Damian Massanet establishes the first Spanish mission at San Francisco de los Tejas (in present-day Texas).

1692

The witch trials scandalize the town of Salem, Massachusetts. Puritans, fearing they have let down the moral standards of their ancestors, begin to search for scapegoats. Widowed and older women, along with a handful of men, are accused of engaging in witchcraft and sorcery. The furor eventually subsides—after the governor's wife is accused—but not until more than two dozen alleged witches have been put to death. One of the judges involved, Samuel Sewall, will publicly apologize for his role in 1697.

1698–1701

The English clergyman Nicholas Bray founds two organizations designed to spread the teachings of the Anglican Church in the North American colonies: the Society for Promoting Christian Knowledge and the Society for the Propagation of the Gospel.

1701

Yale College is founded in Connecticut to train that colony's next generation of preachers. As at Harvard, in addition to religious studies, students undergo a rigorous program of liberal education in the classics, arts, and sciences.

1740

George Whitefield, the famed itinerant revivalist from England, embarks on his second tour of British North America. His visit coincides with a marked evangelical upsurge in the colonies, known as the Great Awakening. Whitefield occasionally preaches in churches, but he usually speaks to large meetings outdoors. He enthusiastically advocates a religion of the heart and argues that human feelings and emotion are central to the experience of religion. His visit has an especially profound effect on New Englanders.

The Great Awakening converts many believers to the Baptist and Methodist forms of Protestantism in America, although most itinerant preachers stress that the feelings in one's heart should overcome loyalty to any specific denomination. The Great Awakening also inspires the conversion of a large number of slaves and free blacks, who, in the years that follow, will build their own churches on evangelical models.

Meanwhile, the Great Awakening divides colonial society between Old Lights (those who mistrust the revivalists) and New Lights. (It used to be fashionable to argue that the New Lights spawned the Revolutionary movement, but there was not much hard evidence to support the claim. It is possible, however, to argue that the fire of the Great Awakening brought Americans of various denominations together and may have sparked some recognition of a continent-wide identity.)

1741

In a sermon titled "Sinners in the Hands of an Angry God," and delivered at Enfield, Connecticut, Jonathan Edwards terrifies the congregation with a graphic description of what awaits them in hell. He famously compares human beings' fate with that of a spider dangling from a thread over a flame. Even Edwards, however, like Tennent, Whitefield, and other moderate revivalists, fails to go far enough in the eyes of more radical preachers.

Late 1750s

Neolin, also known as the Delaware Prophet, preaches a pan-native message among the Lenni Lenape (Delaware) people. Among his followers, who receive a revivalistic message that shuns European civilization, is an Ottawa war leader named Pontiac. Neolin argues that native people and white people were created to be separate and that native communities must undergo a cleansing to remove European influences from their villages. Later nativistic revivals, most notably that of Tenskwatawa, the Shawnee prophet, will build on this theme of repudiating white culture and its damaging effects on native lifeways.

1766

A number of Moravians arrive in North Carolina and establish the community of Wachovia. The Moravians are intensely devout pacifists. Although they practice slavery, they accept their slaves as spiritual equals.

1767

Thomas Bradbury Chandler, a New Jersey Anglican, argues forcefully in his published sermon *Appeal to the Public* that America requires Anglican bishops to perform vital ecclesiastical functions in the colonies. His claim that episcopacy and monarchy go hand in hand, and that republicanism can destroy both, is not well received outside the strongly Anglican Middle colonies. Chandler will leave for England in 1775.

1760s–1770s

Father Junípero Serra establishes a string of missions among the native peoples of California, stretching from San Diego in the south to San Francisco in the north. Because of his brutal tactics and the fact that he has been beatified, Father Serra remains a focus for criticism of the Catholic Church's treatment of Native Americans.

1791

The thirteen new states ratify the First Amendment to the United States Constitution, both guaranteeing religious freedom and banning state establishment of religion.

Matthew Jennings

Science and Technology

1503

The Spanish king Ferdinand of Aragon founds the *Casa de Contratación*, a repository of navigational and cartographical knowledge.

1507

Martin Waldseemüller's *Cosmographica* is the first published map to include the word "America."

1512

The "royal pattern," a continuously updated cartographical chart, is established at the *Casa de Contratación*.

1519

Martín Fernández de Enciso's *Summa de Geografia* is published. It is the first attempt to indicate the Americas in relation to European geography in book form.

1520

Hernando Cortéz, conqueror of Mexico, addresses the first of five letters to King Charles I of Spain that add greatly to European knowledge of the American mainland. These letters continue until 1526.

1526

The first Spanish book on the natural history of the New World, Gonzalo Fernández de Oviedo y Valdés's *Natural History of the Indies*, is published in Seville.

1529

In a letter dated July 8, the Italian-born explorer Giovanni da Verrazano describes part of the coast of North America to King Francis I of France.

1534

The French explorer Jacques Cartier searches for the Northwest Passage. He will repeat his unavailing effort in 1536.

1537

Pope Paul III issues the bull *Sublimis Deus*, declaring that natives of the Americas are human beings with souls, not animals.

1538

The first university in the New World is founded at Santo Domingo to train priests.

1540

This is the year of the earliest surviving printed sheet from the Americas, a *Manual for Adults*, which was written in Spanish and printed in Mexico City.

1550

The Dominican missionary Bartolomé de las Casas and the Spanish humanist Juan Ginés de Sepúlveda debate at Valladolid on whether the inhabitants of the New World are natural slaves in the Aristotelian sense. Ginés de Sepúlveda upholds the position that Native Americans are natural slaves; las Casas opposes it. The debate is inconclusive, but las Casas's position eventually wins out intellectually over Sepúlveda's views among Spanish thinkers.

1551

The first university on mainland North America is founded in Mexico City by the Spanish to train priests.

1555

Richard Eden's *The Decades of the Newe Worlde or West India, Conteyning the Navigations and Conquestes of the Spanyards* is published in London. It includes a translation of a large part of Oviedo's earlier work, as well as discussion of Spanish mining techniques.

1569

A Seville physician, Nicolás Monardes, who never crossed the Atlantic, publishes *Two Books, of Which One Treats All the Things Found in the Western Indies Which Are of Medical Use and the Other Treats the Bezoar Stone*. Drawing on information available regarding Native American practices, as well as his own experiences, he paints the New World as full of wonderful cures for Europeans' ailments. Monardes later adds sections to his influential work, which is published in Latin translation in 1574.

1570

The reform of the Spanish Council of the Indies leads to an effort to systematically gather natural and geographical information.

The first medical book published in the New World is *Medical Works*, by Francisco Bravo, in Mexico City.

The Antwerp map seller and cartographer Abraham Ortelius publishes *Theater of the World*, the earliest atlas. It shows North America as a wide continent rather than a narrow barrier between Europe and Asia (as it was previously shown by Waldseemüller and others). The frontispiece adds a personification of America as a goddess to the traditional three figures of Asia, Europe, and Africa.

1571

The Spanish physician Francisco Hernández arrives in Mexico with a royal commission to carry out scientific exploration. He will return to Spain in 1577; his work is never to be published in complete form.

1577

An English translation of Monardes's book, *Joyfull Newes out of the New Founde Worlde, Written in Spanish by Nicholas Monardes Physician of Seville and Englished by John Frampton, Merchant*, is published.

1580

John Florio's English translation of Jacques Cartier's accounts of his voyages is published as *A Short and Briefe Narration of the Two Navigations and Discoveries to the Northwest Partes Called New Fraunce*.

1588

Based on his experiences in Sir Walter Raleigh's Roanoke colony, Thomas Harriot publishes *A Briefe and True Report of the New Found Land of Virginia*. It includes discussion of the prospective colony's natural history, economic resources, and geography.

1589

The first edition of Richard Hakluyt's collection *Principall Navigations, Voyages, and Discoveries of the English Nation* is published. It includes a number of accounts relating to America.

1590

Harriot's *Briefe and True Report* is published in English, French, German, and Latin. It includes the first significant published map of the New World, created by an English cartographer, John White. The edition spreads knowledge of North America in continental Europe.

1602

The first English account of coastal New England, John Brereton's *A Briefe and True Relation of the Discoverie of the North Part of Virginia*, is published.

1610

The French explorer Samuel de Champlain sets up an experimental garden in Quebec to investigate acclimating European crops in North America. He will also ship New World seeds and plants back to Paris.

1612

John Smith's *A Map of Virginia with a Description of the Countrey* is published.

1616

John Smith's *A Description of New England* is published. It includes the first detailed and reasonably accurate map of the New England coast.

1625

Reverend Samuel Purchas publishes a collection of travel narratives, *Purchas His Pilgrimes*, which includes accounts of North America.

1634

William Wood's *New England's Prospect* is published. It combines descriptions of New England's topography and natural history with promotion of colonization in the area.

1635

The French physician Jacques-Philippe Cornuti publishes, in Latin, *Canadian Plants*. Based on plants sent to Paris by French explorers, the well-illustrated work is the most scientifically advanced treatment of New World plants to date.

1636

Harvard College is founded, primarily to train ministers. It offers courses in the classics, science, philosophy, and theology.

1638

The first printing business in British America is in operation by early October in Cambridge, Massachusetts.

1639

The first British-American almanac is published in Cambridge, Massachusetts. The author is a sea captain, William Pierce.

1646

The first American mechanical patent is issued by the Massachusetts Bay Colony to Joseph Jenks. It grants him an exclusive right for fourteen years to his improvements in sawmills and scythes.

1650

The New England alchemist George Starkey, frustrated with the paucity of available laboratory equipment, relocates to England. There, he becomes a leading chemist.

1657

Richard Ligon's *A True and Exact History of the Island of Barbadoes* is published. Ligon discusses natural history, concentrating on crops of actual or potential economic value. As one of the few books about the Caribbean available in English, it will influence subsequent studies.

1662

The Royal Society, a group for the promotion of natural knowledge, is chartered by King Charles II on July 15. Among its members is the American John Winthrop, Jr. On July 16, Winthrop gives a talk on the preparation of pitch in New England, the first paper at the Royal Society by a colonist.

1672

John Josselyn's *New-England's Rarities Discovered* is published. Along with his later *An Account of Two Voyages to New-England* (1674), Josselyn's work constitutes the most complete natural history of New England produced in the colonial era.

The first book in English devoted to West Indian botany, *The American Physitian* by the naval physician William Hughes, is published. This work goes beyond scientific description to discuss medical and economic uses of American plants.

1678

The English clergyman and natural historian John Bannister arrives in Virginia. Until his death in 1692, he will carry on an active correspondence with the Royal Society and many of England's leading natural historians. While Bannister publishes nothing in his lifetime, many later scientists and writers will make use of his manuscripts and collections.

1680

Thomas Brattle of Harvard College telescopically observes a conspicuous comet, which has since been referred to as the Great Comet of 1680. Brattle's records eventually find their way to Isaac Newton, who praises their accuracy in *Mathematical Principles of Natural Philosophy* (1687).

1682

Another great comet, named after Edmund Halley, attracts much interest in America. Halley will later publish *Synopsis on Cometary Astronomy* (1705), claiming that this comet had and would continue to return approximately every seventy-six years. His theories will prove true in 1758.

1683

Increase Mather publishes *Kometographia, or a Discourse Concerning Comets*, exhibiting familiarity with the scientific literature on comets. He leads the formation of the Boston Philosophical Society, the first scientific society in British America. The first meeting is April 30. The society's history is largely unknown, but it seems to have become defunct by the end of 1685.

1687

In September, Hans Sloane leaves England as the newly appointed physician to the governor of Jamaica. He will return to England in 1689 with an enormous natural history collection from the Caribbean.

1688

The Reverend John Clayton, who lived in Virginia from 1684 to 1686, sends the first of six letters on Virginia's natural history and geography to the Royal Society. Dated May 12, it is read at the society meeting on May 16. The letters will continue through May 22, 1694.

John Love publishes the first surveying manual adapted to New World conditions, the frequently reprinted *Geodaesia, or the Art of Surveying and Measuring of Land Made Easy*.

1693

The College of William and Mary is founded.

1696

Sloane publishes *Catalog of Plants of the Island of Jamaica* in Latin. Its usefulness is enhanced by cross-references to other works of Caribbean botany.

1701

A new school, later to become Yale College, is founded at Saybrook, Connecticut.

1705

The French monk and government agent Charles Plumier publishes the eight-volume *American Botany*.

1708

Thomas Robie of Harvard begins publishing an almanac series, *An Ephemeris of the Coelestial Motions*. Several volumes will include discussions of scientific topics, disseminating Newtonian physics to a popular audience.

The Philadelphia physician Christopher Witt establishes a botanical garden at Germantown, Pennsylvania.

1711

Cotton Mather starts gathering accounts of American curiosities to send to *Philosophical Transactions*, the journal of the Royal Society.

1718

French cartographer Guillaume Delisle publishes a *Map of Louisiana and the Course of the Mississippi*, combining advanced cartographic technique with aggressive support of French territorial claims.

1719

On December 11, a spectacular aurora borealis appears over New England. Along with the English aurora of 1716, it will inspire pamphlets by Cotton Mather, Thomas Robie, and the Reverend Thomas Prince. Robie and Prince emphasize that auroras can be explained by natural causes and are not divine signs. Mather attempts to balance natural and providential causes.

1720

The first pharmacopoeia (list of medicines) published in British America, the *Pharmacopoeia Londinensis*, is printed at Boston. It is a reprint of a seventeenth-century English work.

Herman Moll responds to Delisle's *Map of Louisiana* with *A New Map of the North Parts of America Claimed by France* supporting English territorial claims.

1721

During a smallpox epidemic in Boston, Cotton Mather and Dr. Zabdiel Boylston introduce inoculation, only recently known to Europeans. Mather draws on information both from *Philosophical Transactions* and from questioning his slave Onesimus and other African Americans about African inoculation practices. Mather's advocacy sets off a major controversy, and, in November, an opponent of inoculation throws a bomb (which fails to explode) into his house. He also publishes *The Christian Philosopher*, an ambitious attempt to present current science, as he understands it, in the framework of Puritan theology.

1722

Mark Catesby arrives in Charles Town, South Carolina, on May 3. With both English and American patronage, he collects natural history specimens, seeds of American plants for English gardens, and information to write a natural history of the area. He will sail for the Bahamas in 1725 and return to London with his discoveries the following year.

1726

Dr. Zabdiel Boylston publishes *An Historical Account of the Small-Pox Inoculated in New-England*, vindicating his and Cotton Mather's pro-inoculation activity. On a visit to London, Boylston is admitted to the Royal Society on July 7. He speaks to the Royal Society and the Royal College of Physicians on his experiences with smallpox inoculation.

1727

The London merchant Thomas Hollis endows the Hollis Professorship in Mathematics and Natural Philosophy at Harvard with 1,200 pounds and a gift of scientific equipment. The first holder of the chair is Thomas Robie's pupil Isaac Greenwood, who arrives from England and gives a series of public lectures on experimental philosophy, beginning in January. Greenwood will do much to promote scientific awareness in New England.

1728

John Bartram, the so-called "Father of American botany," establishes a botanical garden in Kingessing, Pennsylvania.

1729

On May 22, Mark Catesby submits the first of the five parts of the first volume of his *Natural History of Carolina, Florida, and the Bahama Islands*. The final installment of this first volume is presented to the Royal Society on November 23, 1732.

Isaac Greenwood publishes the first mathematical textbook by an American, *Arithmetick Vulgar and Decimal*. It will not be as successful as European imports.

1731

The octant, a navigational instrument, is independently invented by John Hadley in England and Thomas Godfrey, Sr., in Pennsylvania. The coincidence sets off a series of unsubstantiated charges of stealing the idea made by Americans against Hadley.

Benjamin Franklin and his associates found the Library Company of Philadelphia. A general-interest institution, it will acquire many scientific books and a collection of scientific instruments.

1733

Founded in the new city of Savannah, the Trustees' Garden is the first public garden devoted to agricultural research in British America. Unfortunately, due to neglect, this garden will disappear by 1748.

1735

The first part of the second volume of Catesby's *Natural History* is submitted to the Royal Society on January 20. The whole work will not be completed until April 16, 1747.

1736

Dr. William Douglass, an opponent of smallpox inoculation in 1721 (he had since accepted the practice), leads the formation of the Boston Medical Society, which is devoted to advancing medical knowledge. Douglass also publishes a clinical study of the recent New England scarlet fever epidemic, *The Practical History of A New Epidemical Eruptive Military Fever, with an Angina Ulcusculosa, Which Prevailed in Boston, New England, in the Years 1735 and 1736*.

1737

America's first commercial botanical garden and nursery is established at Flushing, New York, by the French Huguenot settler Robert Prince. His descendants will continue to own it until 1869.

1738

A smallpox epidemic rages in Charles Town, South Carolina. A Scottish doctor, James Kilpatrick, inoculates about 800 people before the practice is outlawed.

Isaac Greenwood loses his position at Harvard due to drunkenness.

1739

On January 2, Isaac Greenwood's former pupil and astronomer John Winthrop, Jr., takes the Hollis Chair at Harvard. He will hold the chair until his death, introducing differential and integral calculus into the curriculum.

A French military party discovers a deposit of fossils, including a mastodon, at Big Bone Lick on the Ohio River in the present-day state of Kentucky.

The Dutch botanist Johann Friedrich Gronovius's *Flora Virginica* is published. It is based on a manuscript by the Virginia botanist and collector John Clayton. A second volume appears in 1743.

1740

The College of Philadelphia, later the University of Pennsylvania, is founded.

Around this time, Benjamin Franklin devises the Pennsylvania Fire Place or Franklin stove, a device for heating rooms more efficiently by minimizing the escape of heated air.

1742

A spectacular shooting star arouses the Reverend Thomas Clap's interest in meteors, to which he will devote much of his scientific career.

1743

The first American Philosophical Society is founded in Philadelphia. It will last until 1746.

1744

Benjamin Franklin gives a model Franklin stove to the iron founder Robert Grace, which helps publicize the invention.

1745

Thomas Clap becomes president of Yale College, a position he will hold until 1766. He reorganizes the curriculum to place more emphasis on science.

Cadwallader Colden publishes *An Explication of the First Causes of Action in Matter; and the Cause of Gravitation*, a work of physical theory that attracts some notice, mostly unfavorable, in Europe.

In Philadelphia, Dr. Thomas Cadwallader publishes his *Essay on the West-India Dry Gripes*, discussing cases of lead poisoning caused by the use of lead pipes in distilling West Indian rum.

1746

The College of New Jersey, later Princeton University, is founded.

1748

In September, a Swedish disciple of the great botanist Carl Linnaeus, Peter Kalm, arrives in North America. Kalm will gather plants in Pennsylvania, New York, New Jersey, and New France, and meet many American botanists, natural historians, and other scientists before leaving for Sweden in February 1751.

The clergyman-physician Jared Eliot publishes the first of six short treatises, *Essays on Field-Husbandry in New England*. The last pamphlet in the series, which adapts the new agricultural ideas of the Englishman Jethro Tull and other "improvers" to New England, will be published in 1759.

The Charleston Library Society is founded in South Carolina.

1749

Benjamin Franklin's friend Ebenezer Kinnersley commences a tour of the colonies that will last until 1753. An electrical demonstrator, lecturer, and showman, Kinnersley disseminates Franklin's electrical theories.

A medical society is organized in New York City.

The surveyor Lewis Evans publishes *Map of Pensilvania, New-Jersey, New-York, and the Three Delaware Counties*.

1750

A group called the Young Junto starts meeting in Philadelphia to discuss scientific questions, among other issues.

1751

Benjamin Franklin publishes *Experiments and Observations on Electricity*, putting forth his electrical theory and suggesting the use of pointed metal rods to protect buildings from lightning.

The British Parliament removes the tariff from American potash (potassium carbonate), a substance derived from burning wood and used in soap manufacture, glassmaking, dyeing, and bleaching. This leads to expansion of the American industrial chemical industry.

1752

In June, Benjamin Franklin's famous experiment with a kite and key establishes that lightning is a form of electricity.

The Pennsylvania Hospital is founded in Philadelphia.

Along with Britain, the colonies switch from the Julian calendar to the Gregorian calendar. Eleven days are expunged from the calendar following September 2.

Two surveyors, George Heap and Nicholas Scull, publish *A Map of Philadelphia and Parts Adjacent, with a Perspective View of the State House*.

1753

On July 5, for financial reasons, the Royal Society withdraws the exemption from fees previously extended to fellows from the colonies.

On November 30, the Royal Society awards Benjamin Franklin the Copley Medal, its highest honor.

The Philadelphia professor Theophilus Grew publishes a textbook, *The Description and Use of the Globes, Celestial and Terrestrial*.

1754

The Royal Society of Arts is founded. Also known as the London Society for the Arts, this group is devoted to improving technology in Britain and its colonies by circulating technical information and offering prizes for new ideas.

King's College in New York, later Columbia University, is founded.

Joshua Fry's and Peter Jefferson's *Map of the Inhabited Parts of Virginia* is published. It will go through several more editions in England and France.

1755

Dr. John Moultrie organizes a Charles Town medical society, the Charles Town Faculty of Physick, becoming its first president. It is oriented more to improving physicians' economic status than to advancing medical science.

On November 18, an earthquake shakes New England. On November 26, John Winthrop, Jr., gives a lecture in the Harvard chapel, setting forth the natural explanations of earthquakes and rebuking those who ascribed them to God's anger. The talk is published as *A Lecture on Earthquakes* and sets off a controversy between Winthrop and Thomas Prince that lasts into the next year.

The first edition is published of Dr. John Mitchell's government-sponsored *A Map of the British and French Dominions in North America*.

Lewis Evans's *General Map of the Middle British Colonies in America* is published.

1756

On April 29, Benjamin Franklin is admitted as a fellow of the Royal Society. On July 15, it is unanimously agreed that fees be waived for those from the colonies.

The Jamaica physician Patrick Browne publishes *Civil and Natural History of Jamaica*, the first book in English to apply Linnaeus's system of botanical classification based on the number and arrangement of a plant's sexual organs to American plants.

1758

William Small becomes professor of mathematics at the College of William and Mary. Before moving back to England in 1764, Small will become Thomas Jefferson's instructor, impressing him favorably.

1759

The Lancaster Library Company is founded in Lancaster, Pennsylvania. It is modeled on the Philadelphia Library and includes a museum and collection of scientific equipment.

1760

The English natural historian John Ellis, with the approval of Linnaeus, Europe's arbiter of botanical names, names the cape jasmine after his correspondent, the botanist and physician Alexander Garden of Charles Town. The plant is now known as the gardenia.

1761

The first of two transits of Venus across the face of the sun in the mid-eighteenth century occurs on June 6. These rare phenomena provoke worldwide bursts of scientific activity. The transit is not visible in the thirteen British colonies, but John Winthrop, Jr., leads a group of observers to Newfoundland in a trip financed by the Massachusetts Assembly with instruments on loan from Harvard. Winthrop subsequently publishes *Relation of a Voyage from Boston to Newfoundland, for the Observation of the Transit of Venus, June 6, 1761*.

1762

The Pennsylvania Hospital Library, the first medical library in British North America, is founded.

William Shippen delivers a course of anatomy lectures in Philadelphia with the hopes of founding a medical school. He also promotes "man-midwifery," the supervision of births by male surgeons rather than female midwives.

John Bartram explores the interior of South Carolina in search of new plants.

Jared Eliot publishes *An Essay on the Invention, or Art of Making Very Good, if Not the Best Iron, from Black Sea Sand*.

1763

The London Society of Arts awards Eliot a gold medal for his success in extracting iron from sand. The society also sends James Stewart to New England to encourage the potash industry.

A New York Society of Arts is formed with the goal of fostering an independent American linen industry.

Two Englishmen, Charles Mason and Jeremiah Dixon, arrive in Philadelphia in November to begin establishing the borders of Pennsylvania. They start by fixing the latitude of the southern boundary of Philadelphia.

James Cook, working for the British Admiralty, commences the first exact survey of the coast of Newfoundland, a task that lasts until 1767.

1764

Early in the year, Harvard Hall is destroyed by fire, along with the collection of scientific and experimental equipment built up by Isaac Greenwood and John Winthrop, Jr. Winthrop appeals to the public for funds to replace the collection, and with the help of Franklin, then in England, he is able to build the largest and most up-to-date instrument collection of any colonial institution.

During the summer, Charles Mason and Jeremiah Dixon trace the north-south line dividing Pennsylvania from Delaware.

The College of Rhode Island, later Brown University, is founded.

1765

John Winthrop, Jr., is admitted as a fellow of the Royal Society on February 20 with the sponsorship of Benjamin Franklin.

In the spring, Mason and Dixon begin establishing the east-west Mason-Dixon Line between Maryland and Pennsylvania.

John Bartram is appointed king's botanist and explores the southeastern British colonies, including Florida, recently acquired from Spain.

Dr. John Morgan, armed with a medical degree from Edinburgh and a letter dated February 15 from the proprietor of Pennsylvania, Thomas Penn, begins agitating for the creation of an American medical school. A talk he gives is published as *Discourse upon the Institution of Medical Schools in America*. Morgan's program for medical education includes an emphasis on science. The medical school of the College of Philadelphia is founded under his leadership.

A state-run botanical garden is founded on the British-held island of St. Vincent.

1766

Several medical societies are formed. On February 14, the Philadelphia Medical Society is founded by a group of physicians led by John Morgan. In July, the Medical Society of New Jersey is formed; concerned primarily with regulating and improving medical practice, it also holds meetings at which scientific papers are read. Another medical society is formed in Litchfield County, Connecticut.

The Young Junto takes on more formal organization and a new name, the American Society for Promoting and Propagating Useful Knowledge.

Queen's College, later Rutgers University, is founded.

An anonymous pamphlet published in Boston, *Directions for Making Calcined or Pearl-Ashes*, promotes the manufacture of pearlash, a refined form of potash.

1767

The American Philosophical Society is revived in Philadelphia.

The Society of the Hospital of the City of New York is founded to encourage the building of a hospital in the city.

On August 14, the medical school of King's College is founded by the action of the trustees.

On October 7, Mason and Dixon make their last measurement, at the mouth of Dunkard Creek.

Two treatises on potash production and American potash are published in London, Robert Dossie's *Observations on the Pot-Ash Brought from America* and W.M.B. Lewis's *Experiments and Observations on American Potashes*. Dossie is a leader in the Society of Arts.

The Charles Town physician Lionel Chalmers publishes *An Essay on Fevers*. It will attract European interest, being republished in London in 1768 and in German translation in 1773.

1768

On November 4, the Philadelphia Medical Society is dissolved as its members are admitted to the American Society for Promoting and Propagating Useful Knowledge. On December 20, the American Society and the American Philosophical Society merge to form the American Philosophical Society for Promoting Useful Knowledge, America's first enduring scientific society.

A chair of mathematics and natural philosophy is established at the College of New Jersey; however, this position will not be filled until William Charles Houston takes the chair in 1771.

A German scholar, Cornelius de Pauw, publishes in Berlin *Philosophical Researches on the Americans*. Following the French natural historian Buffon, de Pauw argues that American animals and peoples are naturally inferior to those of the Old World, particularly Europe. This sets off a controversy lasting several decades, involving Thomas Jefferson and Alexander von Humboldt, among others.

1769

On January 2, at the first meeting of the American Philosophical Society, Benjamin Franklin is elected president in absentia. In January, a member of the society, the military officer Lewis Nicola, publishes the first issue of *The American Magazine, and General Repository*. This periodical, which lasts for only nine months, includes much scientific material (mostly reprinted from European sources) and unofficial transactions of the American Philosophical Society.

The second transit of Venus on June 3 occasions more observations and widespread interest in the American colonies. A French expedition to Baja California led by the astronomer Jean-Baptiste Chappe d'Auteroche is nearly wiped out by an epidemic; the sole survivor brings the data back to Paris.

The Royal Society sends an expedition to Hudson Bay to observe the transit. For health reasons, John Winthrop, Jr., turns down an invitation from the Royal Society to observe the transit at Lake Superior. (The expedition is later abandoned due to a lack of funding.) He observes the transit from Harvard, communicating his results directly to *Philosophical Transactions*. The American Philosophical Society also sponsors and gathers over twenty observations.

On August 1, Benjamin Rush is appointed professor of chemistry at the College of Philadelphia.

Dartmouth College is founded in Hanover, New Hampshire.

1770

The physician Benjamin Gale is awarded a special gold medal by the London Society of Arts for an improved drill-plow for sowing grain. This accomplishment builds on the work of Thomas Clap and Gale's father-in-law Jared Eliot.

Benjamin Rush publishes the first American chemistry textbook, *A Syllabus of a Course of Lectures on Chemistry*.

1771

The first volume of the *Transactions of the American Philosophical Society* is published in February, including observations of the 1769 transit.

The Hudson's Bay Company sends the first of four large collections of natural history specimens to the Royal Society. (The others will be sent once a year for the next three years.)

The Society of Arts sends James Stewart to Maryland to encourage the potash industry.

New York Hospital is chartered.

David Rittenhouse completes work on the first orrery built in America. This mechanical representation of the motions of the planets and moons of the solar system provokes much interest and is eventually bought by Princeton University.

1772

The Virginia physician James McClurg publishes *Experiments upon the Human Bile*.

1773

William Bartram, son of botanist John Bartram, leaves on a series of expeditions through southeastern British America, which will last until 1776.

Benjamin Rush publishes *Experiments and Observations on the Mineral Waters of Philadelphia, Abingdon, and Bristol*.

The Virginian Society for the Promotion of Usefull Knowledge is founded, with John Clayton as its first president.

The first insane asylum in British America, at Williamsburg, Virginia, opens its doors.

1775

The fourth edition of Mitchell's map is published as *A Map of the British Colonies in North America with the Roads, Distances, Limits and Extent of the Settlements*.

The Dutch engineer and surveyor Bernard Romans publishes *Concise Natural History of East and West Florida* along with coastal charts for sailors.

Henry Monzon's *An Accurate Map of North and South Carolina with Their Indian Frontiers* is published.

A Yale student, David Bushnell, invents and builds a one-man submarine for use against the British.

1776

The American Revolution leads to the suspension of the meetings of the American Philosophical Society. These meetings will not resume until 1779.

The shortage of gunpowder for the American armies leads to increased interest in gunpowder manufacture, particularly the scarcest ingredient, potassium nitrate, known as saltpeter. Benjamin Rush publishes *Essays upon the Making of Salt-Petre and Gun Powder*.

Around this time, Jeremiah Wilkinson of Cumberland, Rhode Island, devises a technique for making nails out of cold iron rather than through heated forging.

Lionel Chalmers's *An Account of the Weather and Diseases of South-Carolina* is published. In it, he attempts to systematically correlate changes in the weather with epidemics.

1777

The Continental Congress commissions the Corps of Engineers. At first composed of four French officers, the corps will remain dominated by foreign engineers, such as Thaddeus Kosciuszko, throughout the war.

1778

The surveyor Thomas Hutchins publishes *Topographical Description of Virginia, Pennsylvania, Maryland and North Carolina*.

The first original American pharmacopoeia, *Pharmacopoeia simpliciorum et efficaciorum* by William Brown, is published.

1779

In an order dated March 10, Benjamin Franklin follows French example by directing captains of American ships not to molest the British scientific and geographical expedition of Captain Cook. Franklin lacks authority for this order, which also is too late. Cook has already been killed by native Hawaiians on February 4, after mapping much of the northwestern seacoast of North America.

1780

At the urging of John Adams and others, the Boston Academy of Arts and Sciences is founded with a charter from the Massachusetts General Court.

The American Philosophical Society is formally chartered by the Pennsylvania Assembly.

1781

The Massachusetts Medical Society is incorporated November 1. It combines the function of advancing medical science with the right to examine and license medical and surgical practitioners.

Thomas Clap's *Conjectures upon the Nature and Motion of Meteors*, in which he argues meteors are comets that orbit the earth, is published posthumously.

1782

The Harvard Medical School is founded in November. A library will be added the following year.

Caribbean

Before 1492

Before Columbus's landing in 1492, three main groups inhabit the Caribbean islands. All are fairly recent migrants, most likely from South America. The Ciboney (Siboney), Arawak (or Lucayan), and Carib languages are interrelated, and the three are mutually intelligible. Most natives live on or near the coasts of the islands, since the sea provides them with a rich array of food and resources.

"Ciboney" refers to many small groups of people. They live in rock shelters and caves along the northwest coasts of Cuba and Hispaniola and have been in the Caribbean longer than the Arawaks and Caribs. They subsist by collecting fruit and shellfish and by hunting fish and turtles. Later archaeological sites reveal chipped and ground stone tools but no evidence of pottery or weaponry.

The Arawaks and Caribs are the second and third groups to settle the Caribbean. Both groups farm, hunt, fish, weave clothing, and build homes in similar ways, although they do not get along with each other. They practice *conuco* agriculture (a system of raising such root plants as yuca or manioc, by burning brush and piling topsoil into fertile mounds). Yuca is the main ingredient in the natives' traditional, flat, unleavened bread.

The Arawaks live on the Bahamas, the Greater Antilles (Cuba, Jamaica, Hispaniola, and Puerto Rico), and Trinidad. They produce pottery and baskets. Collecting gold from riverbeds, the Arawaks also produce gold nose rings and earrings, as well as necklaces and masks. And they participate in ball games, played in a rectangular court at the village center. Hispaniola is divided into five or six paramount chiefdoms.

The Caribs live mainly on the Virgin Islands and many of the Lesser Antilles (such as Anguilla, Barbuda, Antigua, Guadeloupe, and Martinique). Their government is more decentralized than that of their Arawak neighbors, and their gendered division of labor (men hunt, fish, and practice military skills, while women practice agriculture and maintain the home) is more strict than that of the Arawaks.

When the Spanish arrive, they classify the Caribs as vicious cannibals and the Arawaks as a peace-loving people. The accounts are exaggerated and colored by the fact that the Caribs more frequently resist the Spanish invaders with violence.

1492

Christopher Columbus, a Genoan sailor employed by King Ferdinand and Queen Isabella of Spain to reach the Indies, instead reaches San Salvador (Watling's Island) in the Bahamas. He mistakenly believes that he has achieved his goal and labels the people he meets on his voyage "Indians." (Until his death in 1506, Columbus will continue to claim that the islands he found are part of Asia.)

Later in 1492, Columbus reaches Cuba and Hispaniola, where he establishes the Spanish colony of Navidad. He returns to Spain with some pieces of gold and six Lucayo (Arawak) natives.

1493

A much larger expedition, made up of seventeen ships instead of three, sails from Spain under the direction of Columbus, who has been named an admiral. He tours most of the Lesser Antilles and Puerto Rico before arriving in Hispaniola in 1494.

On Hispaniola, Columbus disrupts native agricultural practices by forcing the Arawaks to find set amounts of gold. He also alienates the Spanish colonists (who probably resented serving a Genoan). Both Christopher and his brother Bartholomew mismanage the island.

1496

Columbus's brother Bartholomew moves the capital from Isabella to Santo Domingo. It will remain the administrative capital of the Spanish empire in the Americas for thirty years. San Domingo also will be the main port for Spanish shipping, until it is replaced by Havana in the 1560s.

1500

Francisco de Bobadilla, recently named royal governor of the Indies, arrives at Hispaniola in the midst of a civil war. He arrests both Columbus brothers and sends them back to Spain. Bobadilla increases gold production by licensing the mines and providing incentives.

1502

A hurricane destroys most of the gold Bobadilla has collected, along with his records, and he dies in the fierce summer storm.

Nicholas de Ovando arrives and establishes royal control over Hispaniola. He grants *encomiendas*, the rights to the labor of specific Native American communities, to Spaniards who are able to wield this power effectively. Ovando's administration, while severe, allows Hispaniola to flourish briefly. The population grows from 300 in 1502 to around 8,000 in 1509. The number of native people, however, who are forced to labor intensely and have no resistance to the epidemic diseases brought by the Europeans, drops catastrophically.

1508

Juan Ponce de León founds the colony of Puerto Rico, establishing towns near the richest gold deposits. Gold supplies are soon exhausted, and most of the settlers move to Hispaniola, Cuba, or Panama.

1509

Juan de Esquivel leads an expedition to Jamaica, where no gold is found. Within a few years, the island's natives are dead or serving Spanish masters in other parts of the New World. Most of the Spanish colonists leave.

1511

Cuba becomes the second most important Spanish possession (after Hispaniola). Pánfilo Narváez leads a wave of unprovoked massacres of Native Americans, and within a year, the entire island is under Spanish control. By 1519, gold supplies will be exhausted and most of the Arawaks will be dead or dispersed to labor in other parts of Spain's New World empire.

1513

The Spanish government begins to issue licenses to individuals to import slaves from Africa. This is an attempt to gain the advantage over Portuguese slave dealers, as well as an effort to prevent the extermination of the Arawaks, much lamented by church officials, by forcing black slaves to work in their stead.

1519–1521

The Spanish discovery of the Aztec empire and its subsequent conquest diminish the role that the Caribbean plays in the empire. The gold and silver carried out of Mexico and South America draw the attention of English, French, and Dutch pirates.

1542

The Spanish Crown outlaws Native American slavery. This decree has almost no effect in the Caribbean, where native populations have been virtually erased (save for a few villages) by a half-century of Spanish occupation. By this time, the Arawak population has dropped from approximately 225,000 to perhaps a few hundred.

1564

In response to pirate attacks, Spain requires that all treasure-bearing ships must sail in one fleet from Havana to Seville on their return voyages. This affords smaller, lighter ships (such as caravels) the protection of more heavily armed galleons and greatly reduces the number of ships lost to pirates. Spanish settlements in the New World still prove easy targets for raiding parties.

The new shipping rules require that the massive annual fleet gather at Havana, which helps the economy of that city. Through the second half of the sixteenth century, Cuba will become a center of tobacco and, to a lesser extent, sugar production.

1570s

The Spanish sugar industry, which enjoyed modest success in Santo Domingo, Puerto Rico, and Jamaica, collapses. The Spanish authorities focus more intently on removing precious metals and protecting their shipment across the Atlantic.

1580s

The Spanish own sugar-producing areas in Brazil from 1580 until the 1630s. Production in these areas undercuts the prices of Caribbean sugar, further weakening the Spanish Caribbean sugar industry.

1585

After astonishing success in taking Peruvian silver, the English sea captain Sir Francis Drake turns his attention to the Caribbean, sacking Santo Domingo and Cartagena. Although he does not carry off treasure, his actions spur more fortress construction on the part of the Spanish.

1595

Rather than issuing licenses to individual slave traders, the Spanish Crown sells monopolies to a series of Portuguese merchants. The monopoly, known as the *asiento*, limits the number of slaves, though this proved impossible to enforce.

1598

The Treaty of Vervins ends about 70 years of continuous strife between France and Spain. A secret addendum to the treaty excludes the Caribbean from the peace. "Beyond the lines"—that is, south of the tropic of Cancer and west of the Azores—ships are still fair game. Most European nations recognize that the customary rules of trade and diplomacy do not apply in the Caribbean.

1599–1609

Following the disappearance of the Puerto Rican sugar industry, only a few thousand inhabitants (many freed slaves and blacks) raise open-range cattle and farm for subsistence. Jamaica, still technically ruled by Columbus's heirs, falls under the misrule of a series of petty tyrants.

The Dutch, engaged in a long struggle against the Spanish in Europe, begin to flex their naval muscles in the Caribbean; they start to trade extensively in salt and tobacco, while at the same time raiding Spanish ships. By 1606, Spanish coastal shipping has stopped almost entirely as a result of Dutch depredations.

1621

The Dutch establish the Dutch West India Company in an effort to expand their role in the Caribbean and to weaken already deflated Spanish interest. The company focuses intently on Brazil (taking it for a time in the 1630s and 1640s), while seeking to further damage Spanish shipping in the Caribbean.

1624

Sir Thomas Warner, with a force of less than twenty men, founds the first permanent British Caribbean colony at St. Kitts. After dispatching a group of hostile Caribs, Warner and his followers plant tobacco, which they later ship to London. As a reward, Warner is granted the position of governor of St. Kitts, Nevis, Barbados, and Montserrat.

1627

Permanent English settlement begins on Barbados. Within decades, Barbados's population will reach almost 69,000; 47,000 of these residents will be African slaves. In fact, Barbados will be more densely populated than most of England.

Barbados thrives as the result of the booming sugar industry. This allows for a strictly hierarchical society, with wealthy planters, those who own the most land and slaves, at the top. Barbadian planters employ a mix of indentured servants and African slaves in their sugar plantations and accompanying mills. By the 1660s, however, worsening conditions in Barbados, improving conditions in England, and increasing migration to North America will lead to the decline of indentured servitude on Barbados.

1628

Dutch ships under the command of Piet Heyn trap the entire Spanish fleet carrying Mexican treasure in Matanzas Bay, Cuba. The company's plunder is estimated at 11 million guilders.

1631

The Dutch occupy Sint Maarten and take advantage of its high-quality salt flats. The Spanish attack the small Dutch garrison in 1633 and occupy the island. After 1648, the island will come under joint Dutch and French control.

1634

The West India Company takes control of Curaçao, following this success by adding Bonaire and Aruba in 1636. Over the next 20 years, Curaçao proves to be a drain on company resources but an effective staging point for military adventures.

1635

The French undertake the colonization of the Lesser Antilles, when they settle colonies on Martinique and Guadeloupe. These colonies differ from the British and Dutch ventures in that they have been created by state guidance, not commercial interests. The French will experience conflicts among themselves and with the Carib peoples on the islands for decades.

1651

The English Commonwealth sends a fleet to Barbados, which has recognized the exiled Charles Stuart as king. When the fleet reaches Barbados, it is too weak to take the island, and the islanders agree to take on a new governor in exchange for the ability to trade with the Dutch and other concessions. The 1650s and 1660s mark the height of profitability for sugar production in Barbados. This period also sees a marked decline in white population and an increase in African slaves; poor and middle-class whites (and even some planters) flee the island as it becomes increasingly devoted to a harsh slave labor regime and sugar plantations.

1655

Britain conquers Jamaica. Though the plan (the Western Design) is to conquer all of Spain's colonies and remove that nation from the Caribbean entirely, the British are only able to hold on to Jamaica.

In January, the British try to take Santo Domingo by land and sea but fail twice to even reach the city (internal strife between the commanders plays a role).

In May, commanders of the British fleet (fearing a return to Cromwellian England with nothing to show for their trouble) turn their attention to Jamaica. The small Spanish garrison, allied with runaway slaves, loses its forts right away but manages to hold out in the mountains for two years. Eventually, the slaves join the British side. Cromwell rules Jamaica under martial law. After the Stuart restoration, King Charles II rules it as a Crown colony.

1660 and 1663

Two sets of Navigation Acts are enacted by England's restored monarchy under Charles II. These laws force the British possessions in the Caribbean to conduct trade only with Britain. Commodities such as sugar and tobacco must be carried in British ships to England or other British colonies.

1661–1664

Louis XIV assumes power as king of France. During his reign, independent proprietorships cease to exist, and the French Caribbean increasingly comes under royal control. In 1664, the French West India Company is chartered, based on the Dutch West India Company; the company, an economic failure, will be liquidated in 1671.

1665

The French establish control over the western third of Hispaniola, which they call Saint-Domingue (today, the Republic of Haiti). Bertrand d'Ogéron is entrusted with the tasks of settling farmers on the western coast of Hispaniola and imposing order on Tortuga, a small island that has been functioning as a de facto pirate kingdom. Within a decade, d'Ogéron will accomplish both of these goals. Tobacco becomes the first successful cash crop of Saint-Domingue.

1665–1667

The Second Dutch War essentially removes the Spanish from the colonization of the Caribbean. Up to this point, Northern Europeans have usually worked together against Spanish interests. After 1665, the contest between France and England becomes more important and forces massive governmental expenditures in support of more than a century of warfare.

The war begins in Africa, where British forces capture Dutch strongholds on the slave coast. The Dutch respond by retaking the forts and proceeding to the Caribbean to wreak havoc on British shipping, destroying cargoes of sugar on the way to England.

The Jamaican government under Thomas Modyford convinces pirates operating out of Port Royal to attack Dutch interests. After early successes, however, the fleet chooses not to attack the more heavily armed island of Curaçao.

The French enter the war on the side of the Dutch and take St. Kitts while they raid the coast of Barbados. Both England and France dispatch warships to the region, and the British fleet defeats a combined Dutch-French fleet.

In 1667, the Treaty of Breda ends the war by returning almost all colonies to their previous owners.

1671

The Danish West India Company is chartered by King Christian V of Denmark and Norway. This company functions in much the same way as the Dutch West India Company, meaning that it seeks to monopolize the slave trade and shipping, but it never makes much of a profit. Denmark controls the small islands of St. Thomas, St. Croix, and St. John.

1672–1678

The Third Dutch War pits England and France (still enemies in the Caribbean) against the Dutch in an effort to diminish Dutch supremacy in commerce and shipping. Britain withdraws from the war in its opening stages, and the Caribbean on the whole plays a relatively minor role. Two French expeditions against Curaçao, in 1673 and 1678, fail terribly when the ships are repulsed by the Dutch and sink in a hurricane, respectively.

Though few colonies change hands, the war does bankrupt the Dutch West India Company. The French and British emerge as the major colonial powers in the region as a result of waning Dutch interest and because the Dutch are unable to protect their ships adequately from French and British pirates.

1689–1697

The Nine Years' War (also known as King William's War) pits England, Holland, and Spain against France. The English and French each wreak havoc on the other nation's Caribbean possessions.

In 1689, the French destroy Dutch settlements on Sint Eustasius and take the British part of St. Kitts. Under the leadership of Christopher Codrington, governor of the Leeward Islands, the English strike back, retaking St. Kitts and Anguilla in 1690. Codrington takes the additional precaution of sending the French settlers of St. Kitts to Saint-Domingue. He goes on to inflict serious damage on Guadeloupe but fails to retain possession of the island.

Disease decimates the crews of two joint Spanish-English vessels, preventing them from taking Saint-Domingue. As in the Second and Third Dutch Wars, the colonies taken are returned to their previous rulers after a peace treaty is signed.

1697

The French government begins to encourage the production of sugar on Saint-Domingue.

1702–1713

The War of the Spanish Succession, known in the Americas as Queen Anne's War, pits Austria, England, and the Netherlands against France and Spain in an effort to prevent the unification of the Spanish and French empires.

The war strengthens pirate control of the Bahamas, and French raiders continue to harass British interests. In one 1712 episode, the French carry off 1,200 slaves from British-held Montserrat.

1714

The Spanish retain Cuba, Puerto Rico, and the eastern portion of Hispaniola (Santo Domingo), although none of these colonies is particularly profitable.

A general cessation of hostilities in Europe, brought about by the signing of the Treaty of Utrecht in 1713, allows plantation agriculture in Jamaica to take off in an astonishing way. The number of white settlers shrinks, while the number of black slaves expands, and they outnumber whites by more than seven to one. The British also own Barbados, St. Kitts, Antigua, Montserrat, and Nevis.

The French maintain Martinique and Guadeloupe. In Saint-Domingue, the French sugar industry also grows by leaps and bounds, since the French now have access to slaves imported through Jamaica.

The British and French, seeking to profit from Europe's rapidly increasing demand for sugar, strive to produce as much sugar as they can in the Caribbean. Sugar plantations will grow larger and more efficient throughout the eighteenth century.

1730s

The colony of Saint-Domingue begins sugar production in earnest, using an elaborate irrigation system to bring increasing acreage under the plow. By 1740, Saint-Domingue is producing almost as much sugar as all of the British West Indies combined.

1733

Slaves on the island of St. John, a Danish possession, capture the island's only fort, burn many of its plantations, and kill most of the whites. They repel successive invasion attempts by British forces and control the island for six months, until an experienced French force of around 230 soldiers is able to subdue them.

1738–1739

Jamaica, which is heavily wooded and mountainous, proves to be an ideal location for the settlement of large Maroon communities. Jamaicans sign two treaties with the Maroons (long-term escaped slaves). The terms of this treaty guarantee the Maroons several homelands and complete autonomy. Interestingly, the Maroons also agree to return more recently escaped slaves from Jamaican plantations, a service for which they receive 2 pounds per slave.

1739–1748

The War of Jenkins' Ear (1739–1743) pits England against France and Spain. The British accuse the Spanish of piracy and intend to force British trade upon the Spanish, as well as to conquer the Spanish Caribbean. In 1741, the British seize Guantánamo Bay, Cuba, intending to march on Santiago; their mission fails when most of the soldiers die from disease.

Despite some minor successes by a British militia deployed from Anguilla, the Treaty of Aix-la-Chapelle in 1748 returns the colonial possessions to their former owners.

1740s

Up to this point, wars, raids by Maroons, low sugar prices, and a lack of available capital have held back Jamaica's full production potential. Following the signing of the treaties between the Jamaican planters and the Maroons, British traders bring in increasing numbers of African slaves. By 1758, 18,000 whites will rule over 180,000 slaves on the island's 455 sugar plantations.

1750

By 1750, the Leeward Islands (Nevis, St. Kitts, Montserrat, Anguilla, Antigua, and the Virgin Islands) are producing three times as much sugar as Barbados.

Substantial Maroon communities thrive in the mountainous region between French Saint-Domingue and Spanish Santo Domingo. In 1752, a charismatic Maroon leader named Mackandal unites the Maroons and creates a secret organization that includes both runaways and slaves on plantations.

1756

Britain and France are the main combatants in the Seven Years' War (called the French and Indian War in North America), a global contest for supremacy between the two emerging world powers. Both Britain and France covet each other's sugar colonies in the Caribbean; these colonies also are vulnerable to attack because of their tiny white minorities and large slave populations.

During the war, the British occupy Guadeloupe and Martinique. On Guadeloupe, the British, weakened again by illness, attack outlying plantations and settlements. They offer French deserters generous terms of surrender, allowing them to continue running the plantations as before, except for the fact that they will have access to British markets and cheaper British slaves. On both Guadeloupe and Martinique, the result of British conquest is to speed up sugar production.

1760

A huge slave rebellion breaks out on Easter Monday in Jamaica. Its leader, Tacky, is a Coromantee man from the Gold Coast. He leads an army of approximately 30,000 blacks, who intend to kill all the whites and rule Jamaica. Tacky's forces are finally defeated in the summer by a combined army of Maroons, the Jamaican militia, and the British army.

1762

The British take Havana. By the terms of the Treaty of Paris, the British return Havana to Spain in exchange for Florida. They also take Canada from the French and return the sugar-producing islands of Guadeloupe and Martinique.

1776–1783

As a result of the booming trade in sugar, St. Kitts has become the richest colony in the British Empire by 1776. The English colonies in the Caribbean are more closely tied to Great Britain than their North American counterparts; as a result, when the thirteen North American British colonies declare their independence in July, none of the British colonies in the Caribbean breaks away from England. Though West Indians continue to trade with American ships and support American independence, their connection to Great Britain (and their reliance on British naval protection) makes independence impractical. Still, from 1776 to 1783, Britain and France challenge each other again on a global scale, and, this time, France wins.

After the siege of Yorktown, Virginia, in 1781, the French fleet under Admiral de Grasse does manage to take St. Kitts, Nevis, and Montserrat. In April 1782, however, the British fleet under Admiral Sir George Rodney pulls off a stunning victory and forces the French to surrender. In 1783, the Treaty of Paris once again returns most of the Caribbean colonies to their previous owners.

Matthew Jennings

Connecticut

1632

Edward Winslow and William Bradford try, unsuccessfully, to convince authorities in the Massachusetts Bay Colony to exploit trade opportunities with Native American communities in the Connecticut River Valley. John Oldham, an English trader from Watertown, travels in the area and brings back descriptions of large amounts of beaver, wild hemp, and graphite.

At approximately the same time, the Dutch build a small fort on the Hartford River in an effort to secure more trade with the region's Native American communities.

1633

The Plymouth Colony establishes a trading post on the west side of the Connecticut River, just south of the Farmington River.

1634

In the fall, John Oldham and a small group of followers begin to settle at Pyquag (present-day Wethersfield). The establishment of households indicates that English settlers are beginning to recognize the quality of the area's farmland.

In September, the Massachusetts General Court forbids the inhabitants of Newtown (present-day Cambridge), and their pastor—Thomas Hooker—from migrating to the Connecticut River country. The Newtown people feel pinched by strict Massachusetts land policies and hope that a move would give them more room. Governor John Winthrop denies their petition, believing that such a departure would deprive Massachusetts Bay not only of Hooker's followers, but also of prospective settlers from England.

1635

The Massachusetts Bay Colony begins to spin off the towns of Windsor and Hartford. A particularly harsh winter drives many of these initial English settlers back to the relative security of the colony, though most will return the following spring.

1636

John Winthrop, Jr., arrives from England as the representative of several important Puritan gentlemen and claims that the settlements on the Connecticut River are illegal. Massachusetts Bay Colony calls a commission to investigate the claims. New groups of English men and women move into the area. In May of 1636, Thomas Hooker sets out from Newtown to found the colony of Hartford. As earlier settlement efforts largely failed, this is generally considered the founding date of Connecticut.

Connecticut is founded as a Puritan colony. Though ministers do not usually hold actual political office, the Congregational Church remains powerful in local and colony-wide affairs. Puritanism is a community-based faith, and serves as a means of social control, as well as personal holiness. The Congregational Church, as the officially established church of Connecticut, will continue to receive governmental support from taxes for many years.

1637–1638

The Pequot War rips through southern New England. In the main action of the war, the English burn hundreds of Pequot noncombatants at a fort on the

Mystic River. The war results in the near-total destruction of the Pequot and the opening of the fertile Connecticut River valley to new waves of English settlement. Surviving Pequots are sold into slavery in the West Indies, and it becomes illegal to identify oneself as Pequot.

1638

Reverend John Davenport and Theophilus Eaton, a merchant, found New Haven. An independent Puritan colony, New Haven never receives an official charter, and, as such, has little claim to the land it occupies. New Haven remains friendly with the colony of Connecticut for most of its short history.

1639

Connecticut Puritans draft and adopt the Fundamental Orders. The Orders state that a General Court consisting of a governor and six magistrates should meet twice yearly, and stand for election once a year at the spring meeting. Freemen can vote for all elected officials, but non-Puritan "admitted inhabitants" are forbidden from voting for the positions of governor and magistrate. The Fundamental Orders remain in force until 1662, when Connecticut obtains its royal charter.

1641

The General Court institutes wage controls for seasonal labor. Skilled artisans—carpenters, coopers, and masons, for instance—can expect to receive 20 pence for an eleven-hour day in the summer and 18 pence for a nine-hour day in the winter. Less skilled workers receive 17 pence in the summer and 14 pence in the winter. Connecticut is not alone in this move; other Puritan colonies institute wage and price controls in order to maintain a tight grip on the economy.

1643

The United Colonies of New England—sometimes called the New England Confederation—band together during the English Civil War. Connecticut, New Haven, Massachusetts Bay, and Plymouth send commissioners to this federal body. Rhode Island is excluded because of its unorthodox status. The main goal of the United Colonies is to protect English interests against the Dutch, as the two empires hold overlapping claims in Connecticut and on Long Island.

1650

The United Colonies and the Dutch sign a treaty at Hartford. At this point, the English outnumber the Dutch by a significant margin. The treaty alleviates some tensions between the two groups, but problems remain. Although the document establishes boundaries, and both sides agree to return outlaws for prosecution, a Dutch settlement is allowed to remain in the Hartford area, and the United Colonies' commissioners live in constant suspicion of collusion between Dutch and Native American forces. When the Dutch and English go to war later in the decade, Connecticut seizes the trading post on the Connecticut River.

The Code of 1650, adopted by the General Assembly, provides legal guidelines for the treatment of servants and slaves. It provides harsh penalties for those who ignore their obligations, and stipulates that captured Native Americans can be shipped out of the colony and exchanged for black slaves.

1657

The popular John Winthrop, Jr. is elected governor. Interestingly, he is popular not only for his skills as a leader, but also as a medical practitioner. He is the first American colonist to be elected to the Royal Society. Like his father, a longtime leader of the Massachusetts Bay Colony, Winthrop serves almost continuously as governor until his death in 1676.

1662

Connecticut receives a royal charter from King Charles II. The effects on Connecticut's de facto self-governing status are relatively slight. The number of deputies serving each town is capped at two. The charter also replaces the General Court with a General Assembly, but the legislative body continues to perform most of the same functions as it had before the charter was granted. Most of the colony-wide political power remains in the hands of the legislature, while the governor and council act when the legislature is out of session.

Also in 1662, Massachusetts adopts the Half-way Covenant, which allows churchgoers who have not experienced conversion to baptize their children, thereby attaining a limited sort of church membership. Connecticut faces similar problems, namely fewer conversion experiences, and disputes break out within the colony's congregations. In 1669, the assembly allows various sects, whether they allow baptism of nonconverted people's children or not, to continue to worship, as long as they remain basically orthodox in the fundamentals of faith.

1665

At the urging of the United Colonies of New England, New Haven is absorbed into the larger Connecticut colony.

1675–1676

Metacom's (King Philip's) War consumes New England. Fighting breaks out between the Wampanoags, the Plymouth Colony, and the Massachusetts Bay Colony in response to increased dispossession and mission activity. Most of the actual fighting takes place outside of Connecticut's borders, but Connecticut commits a significant number of soldiers to the Puritans' war effort. Connecticut will aid western Massachusetts in a number of colonial wars throughout the eighteenth century as well. Interestingly, Edmund Andros, New York's governor, uses the chaos of King Philip's War to assert the Duke of York's claim to much of Connecticut, but after a brief, armed standoff, Andros backs down.

During the war, Connecticut's leaders quarrel with other Puritan military minds over how their troops might best be deployed. Connecticut's armies are employed first as guards for western Massachusetts towns, which displeases Connecticut's government. Additionally, Connecticut's official stance toward Native American communities along the Connecticut River is much less aggressive than that of the Massachusetts Bay Colony and Plymouth, whom Connecticut accuses of unnecessarily antagonizing Native Americans. In the Great Swamp Fight, the climactic battle of Metacom's War, Connecticut's forces suffer a higher casualty rate than those of the other Puritan colonies.

1685

England continues the long process of securing its empire and making it more profitable. Edward Randolph, at the request of the Lords of Trade, charges that Connecticut is in violation of the laws of England and seeks to revoke its charter. (Massachusetts Bay Colony's charter had been revoked in the previous year.) Connecticut's leadership is divided on how to proceed; some favor the acceptance of English rule, assuming they will have high positions no matter who actually rules the colony, while others urge delaying tactics, wavering between joining New York and Massachusetts Bay. In the fall of 1687, Edmund Andros takes control of Connecticut, bringing it into the political entity known as the Dominion of New England. Connecticut never technically surrenders its charter, and legend has it that it was hidden in the Charter Oak in Hartford.

On paper, the effects of the Dominion government on Connecticut appear devastating. The Congregational Church, the backbone of Connecticut society, would no longer receive support from taxes, and Anglicans and members of other denominations would attain legal equality. Militia members could no longer vote for their own leadership; instead, militia officers were to be appointed by Andros. In reality, life in Connecticut under the Dominion of New England changes relatively little.

1689

Following the Glorious Revolution in England, Massachusetts imprisons Governor Andros, thereby ending the Dominion of New England. Connecticut soon returns to business as usual, although some disputes do arise over whether the colony can hold new elections or must wait for a royal appointee to govern.

1690

The General Assembly decides that public grammar schools should be established in New Haven and Hartford. Educational institutions have been in existence since the colony's earliest years, but the new schoolmasters will be supported partly by the colony treasury and partly by the towns.

1693

Governor Benjamin Fletcher of New York, citing a royal commission, seeks to take control of Connecticut's militia. Connecticut lodges a symbolic protest by calling out drummers to play loudly while Fletcher reads his commission, and acts quickly to protect the colony's sovereignty on legal grounds. The Connecticut towns vote overwhelmingly to support an appeal to the king, and they appoint Fitz-John Winthrop (son of John Winthrop, Jr.) to travel to England and secure the colonial charter and the colony's right to control its own militia.

Winthrop, citing a distinction between the king's and Connecticut's militias, is able to forge a compromise. Connecticut will retain its charter and its liberties, and 120 Connecticut men will serve under New York's governor. Connecticut continues to rely on its charter until several decades after the War for Independence.

1701

The General Assembly establishes Connecticut's first institution of higher education in Killingworth (now Clinton), supplying it with ten ministers as trustees and providing 120 pounds a year to support it. The college trains ministers in orthodox doctrine, but it also trains colonial leaders in classical university subjects, following the British model. In 1707, the college will move to Saybrook; in 1716, it will move to New Haven. In 1718, it will be renamed Yale College, following a large donation by Elihu Yale, a wealthy Englishman.

1708

In a Presbyterian reaction to the growing autonomy and diversity of Connecticut's Congregational churches, a group of ministers adopt the Saybrook Platform. This document is an attempt to enforce "ecclesiastical discipline," according to its authors. Pastors from the various churches are to meet together annually to resolve disputes. The platform gains the support of the General Assembly, and it becomes law. Individual congregations lose power, and churchgoers see their control over their specific congregations weakened as well.

1717

Captain John Munson of New Haven inaugurates wagon service between New Haven and Hartford. Munson transports both passengers and goods, and the monopoly granted him by the colonial legislature stipulates that he make at least one trip per month during the spring, summer, and fall.

1740

The Reverend George Whitefield travels through Connecticut, inaugurating a period of religious revival in the colony. There had been earlier revivalistic stirrings, such as in 1721 when the Windham congregation witnessed eighty conversions in six months, but Whitefield's presence ignites a much broader revival. Whitefield's skills as an orator are legendary, and his message leaves no gray area: men are utterly sinful and are totally dependent on God's grace for salvation. Though Connecticut's ministers at first welcome the spiritual fervor and mass conversions of the Great Awakening, they soon begin to mistrust the movement, which splits colonial society between Old Lights (those who question the sincerity of new converts and the effect that they might

have on established congregations) and New Lights (those who follow the revivalist preachers).

1741

Jonathan Edwards, an itinerant preacher from Northampton, Massachusetts, delivers his most famous sermon at Enfield, Connecticut. Titled "Sinners in the Hands of an Angry God," this Great Awakening masterpiece makes people painfully aware of their wickedness and the fact that the only barrier separating them from eternal damnation is God's mercy. Edwards' language is as eloquent as his message is terrifying: "You hang by a slender thread ... nothing to keep off the flames of wrath, nothing of your own, nothing that you have ever done, nothing that you can do, to induce God to spare you one moment."

1754–1763

Connecticut is an active participant in the major campaigns of the French and Indian War (the North American theater of the Seven Years' War). During the course of the conflict, Connecticut commits to raising 28,000 troops to support the British. The actual number of Connecticut soldiers in the field falls short of this ideal, but up to 25 percent of Connecticut's militia is on duty outside of the colony for much of the war. The war does not do too much damage to Connecticut's economy, since farmers and merchants are able to profit from supplying various armies.

1765

In response to George Grenville's proposal to place tax stamps on many colonial documents, newspapers, and other products, protests break out throughout Britain's mainland North American colonies. The Sons of Liberty and other activist groups demand the resignation of Jared Ingersoll, Connecticut's appointed stamp distributor. Interestingly, the storm of protest in Connecticut is mild compared to other hotbeds of anti-Stamp Act activity, most notably Boston.

1769

Connecticut merchants begin to support nonimportation of British goods, following the lead of merchants in Boston, New York, and Philadelphia. Nonimportation as a protest movement arises in reaction to the Townshend Duties, a series of taxes that many people in Connecticut see as burdensome and unfair.

1775

On an official level, Connecticut remains loyal to the king and parliament, but individual Connecticut towns express outrage over the treatment of Massachusetts by the British government. After the fighting at Lexington and Concord, Connecticut prepares for war, calling up one-fourth of its militia, and sending some of its soldiers to fight in Massachusetts and the Continental army.

1776

Connecticut, along with twelve other colonies, declares its independence from Great Britain. Estimates place the adult male population of loyalists, many of them Anglicans, at about 6 percent.

Connecticut fights in the War for Independence largely to maintain the rights guaranteed by its charter. As such, it sees no need to call a new state constitutional convention during or after the war.

Matthew Jennings

Delaware

Prior to the Arrival of Europeans

Most of the Native Americans living along the Delaware River consider themselves Lenni Lenapes, meaning the "original people." They speak a language belonging to the Algonquian family of languages, and they live in a loose confederation of autonomous villages, essentially wedged in between the Five Nations of the Iroquois and the Susquehannock, with whom they fight intermittently. Within villages, a relatively strict gender division is observed. Men hunt individually, while women farm in groups. The major exception to this rule is the fall deer kill, which involves whole communities.

1609

Henry Hudson, an Englishman commanding the Dutch ship *Half Moon*, becomes perhaps the first European to lay eyes on Delaware Bay. Hudson is searching in vain for the Northwest Passage, but accounts of his travels spark interest among the Dutch and the English, who will become the main European players in the Delaware River Valley.

1610

The English captain Samuel Argall, sailing in the employ of the Virginia Company, names Delaware Bay in honor of Thomas West, Baron De La Warr, the governor of the struggling Virginia colony. The name, originally applied to the bay, eventually refers to the river that feeds the bay, the Lenni Lenape living along the river, the lower three counties of Pennsylvania that make up the colony, and, finally, the state of Delaware.

1614

The Dutch name the entire mid-Atlantic region, basically extending from Jamestown to Quebec, New Netherland. They intend to extract beaver pelts and fish from the environs of Delaware Bay.

1621

The Dutch West India Company receives a monopoly from the States-General covering trade with the west coast of Africa and the Americas. This company is responsible for the earliest European settlements in the region, though none of these earliest colonies and trading posts is permanent. Dutch interest in the region remains high, or at least higher than English interest, but the Amsterdam government has other pressing concerns, such as the battle for independence from Spain, and concentrates on raiding wealthy Spanish colonies farther to the south.

1629

The charter of "Freedoms and Exemptions" is approved by the States-General. This statute provides that any independent settlers have a right to as much land as they can cultivate properly. It also stipulates that any stockholder in the West India Company who can settle fifty adults in New Netherland will become the patroon of a large swath of land, which can be passed along to the patroon's heirs. The original patroonships include 16 miles of riverfront property, and extend inland as far as is practical.

1631–1633

Samuel Godyn commissions a colonizing party of twenty-eight men to land on Delaware Bay, where they establish the first European settlement in what is now Delaware. The colony is called Swanendael, a reference to the number of swans in the area. Godyn intends that his settlers begin a profitable trade in whale oil, but they arrive too late in the season. The settlers who remain at Swanendael quarrel with local Native Americans and are all killed by the time reinforcements arrive.

1638

The first permanent European settlement in present-day Delaware occurs when a joint Dutch-Swedish trading corporation, the New Sweden Company, begins construction of Fort Christina (named for Sweden's young queen). The colony is funded by the Dutch—and run initially by Peter Minuit—but most of the colonists are Swedes. In 1641, Swedish investors buy out the last of the Dutch stockholders.

1643

Johan Printz becomes governor of New Sweden. He will govern for a decade and oversee the high point of the colony of New Sweden. By the end of his tenure in 1653, he has assured the survival of New Sweden and its cultural distinctiveness, even though it will eventually be surrounded and overtaken by other colonies.

1651

Peter Stuyvesant, seeking to divert fur trade from New Sweden, sails a fleet of eleven ships up and down the Delaware in a show of force. Though the population of New Sweden is greater than the resulting Dutch settlement, the Dutch presence continues to grow. The settlers build New Castle, which will eventually become Delaware's colonial capital.

1655

An ailing Peter Stuyvesant mounts an expedition against New Sweden. Few shots are actually fired, but the superior Dutch force succeeds in intimidating the Swedish garrison. The Dutch also persuade neighboring native tribes to raid Swedish farms. The governor of New Sweden leaves for Europe, as do some of the Swedish settlers, but many remain behind, free to practice their religion under the governance of the Dutch operating out of New Amsterdam. Under Dutch rule, the population of Delaware becomes more diverse, and it includes people from all over Western Europe, as well as African slaves.

1663

The main European settlement in Delaware, known as the City Colony—so named because it is not under the jurisdiction of the West India Company, is a diverse blend of Dutch, Swedish, and Finnish settlers. The settlers farm grain, brew beer to sell to the growing population of Maryland, raise large amounts of livestock, and engage in trade with local Native Americans for furs.

1664

King Charles II of England grants his brother, James, Duke of York, a huge chunk of the American coast, including the Dutch colony of New Netherland. New Netherland's government tries to prepare a defensive force, but the colony is caught by surprise when four ships and 450 soldiers appear at New Amsterdam. English rule over the former Dutch possessions turns out to be relatively mild. The main winners are London merchants, and the main losers are those operating out of Amsterdam.

1673

The Dutch again briefly regain control over the Delaware River Valley, but by the terms of a treaty signed at Westminster in 1674, they return the region to English control the next year. The new governor, Edmund Andros, insists on an Anglicization program for the Dutch, Swedes, and Finns. Still, much of the distinctive ethnic character of the region remains intact. One of the downsides of the rule of Andros and the Duke of York is the fact that they discourage representative government.

1682

William Penn, the proprietor of the Quaker colony of Pennsylvania, petitions the Duke of York for the pieces of New York on the west side of the Delaware River and is given a charter for them. Late in the year, representatives from Delaware vote to join Pennsylvania. William Penn and Lord Baltimore, the proprietor of Maryland, will clash intermittently over the boundaries of Pennsylvania, Maryland, and Delaware.

1688–1689

James II of England, the former Duke of York and William Penn's close friend, flees England. William of Orange, the stadholder of the Netherlands, and his wife Mary assume the throne of England. Many of the former king's friends, including Penn, end up in jail. Penn is eventually released, but during his absence, the colony of Delaware all but secedes from Pennsylvania for a period of three years. Penn attempts to calm the situation by appointing a separate governor for the Lower Counties. The Lower Counties have developed along slightly different lines than Pennsylvania and contain a much higher percentage of Anglicans than the more heavily Quaker north.

1691

In an effort to modernize the administration of the empire, the Lords of Trade propose that Penn's colony should be placed under royal control. Two years later, when Benjamin Fletcher, already governor of New York, takes power in Pennsylvania and Delaware, he satisfies Lower Counties colonists by appointing one of their own, William Markham, as lieutenant governor.

1694

William Penn's friends regain their influence over the English Crown, and Penn petitions for the return of his rights to govern—his ownership of the land was never really in doubt—which he receives in July. The English government forces Penn to accept all of the laws that have been enacted during Fletcher's administration. Penn also has to pledge loyalty to William and Mary and accept the fact that William Markham will continue to run Pennsylvania until Penn himself can take over the job.

1696

Feeling like little is being accomplished in the way of effective government, Markham dismisses the elected officials of Delaware and Pennsylvania and replaces them with appointees. He also holds legislative elections based on Fletcher's model, which gave New Castle County (Delaware) and Philadelphia County (Pennsylvania) equal representation. Later in the 1690s, Lower Counties delegates will refuse to attend legislative sessions; some counties, even in the face of fines, will refuse to hold elections, furthering the notion that the Lower Counties are independent of Pennsylvanian control.

1699

William Penn returns to America, and relations between Pennsylvania and the Lower Counties improve. Soon after, though, both provinces began to petition for a new charter. The Lower Counties fear that Pennsylvania, with its larger population, will begin to exert an inordinate amount of legislative power.

1700

Called by Penn to New Castle, a new colonial assembly meets and passes more than 100 laws, many of them codifying statutes that have been on the books for years. When the legislature adjourns, however, it still has not provided a new governmental structure for Pennsylvania and the Lower Counties.

1701

A special legislative assembly meets, ostensibly to deal with a royal command regarding the reinforcement of the New York frontier. The Delaware River delegates are frustrated by the decree, since they have no forts and do not want to be forced to finance forts in other colonies while their own shipping interests are in danger. They also object to pacifist Quaker policies that they feel keep them from providing adequate security.

Pennsylvania proper also has problems with the special legislative session, since some delegates question whether laws passed outside of Pennsylvania can be applied inside the colony. Lower Counties representatives counter that if laws passed at New Castle do not apply to Pennsylvania, then Pennsylvania's laws hold no sway over Delaware and promptly walk out of the session. Penn finally concedes that within three years, if either Pennsylvania or Delaware desire to leave the union, he will grant each a separate assembly. Complicated legislative wrangling will continue for the foreseeable future.

1704

In November, the first Delaware assembly meets at New Castle, with four representatives from each of the Lower Counties. The assembly confirms all the old joint assembly laws, and also increases each county's delegation to six. Trouble is brewing, however, between New Castle, the most profitable of

Delaware's counties, and the other counties. New Castle seeks to establish itself as Delaware's commercial center, but those outside of New Castle, particularly merchants operating out of Philadelphia, prefer to retain some ties to Pennsylvania. Despite its political independence, Delaware is drawn increasingly into the commercial world of colonial Philadelphia.

1712

William Penn, who has fallen on financial hard times, makes an effort to sell his rights to govern Pennsylvania and Delaware to the British Crown. Penn eventually sells the rights for 12,000 pounds, though he retains title to the land. Before the transaction can be completed, Penn suffers a massive stroke. He never fully recovers and dies in 1718, leaving his wife Hannah to direct the colonies' affairs.

1717

After suffering through the government of Charles Gookin, Delaware receives a new governor, William Keith. His appointment is not without controversy, since the Earl of Sutherland has also applied for the job. When the Delaware assembly addresses Keith, in a somewhat surprising shift, they remind him of their loyalty to the Penn interests and their desire to remain connected to Pennsylvania.

1718

When William Penn dies, he leaves behind two proprietary colonies and considerable confusion. Hannah Penn is the sole executrix of William's will, and she has to deal with several problems: Penn's oldest son has been disinherited in favor of sons from his second marriage, there are different groups of trustees assigned to the American lands and their governments, and there are mortgagees who have kept Penn out of debtor's prison. Hannah is able to retain the Penn family's grip on Delaware for a few more years.

1720s

While the Penn estate is being sorted out in England, William Keith begins to act independently as a sort of royal governor for Delaware. Keith appoints new courts, institutes a new criminal code, and moves to New Castle County, purchasing an extensive tract he calls Keithsborough, and opening an iron works. He exceeds his authority in 1724, however, when he expands the boundaries of New Castle and gives it a new charter as a city. Keith has issued the charter in the name of the king, and it does not mention the Penns at all. The action gets Keith recalled, and in 1726, Major Patrick Gordon takes over as governor. Keith does not go quietly; he spends several years working behind the scenes and in the Pennsylvania assembly against Gordon's government.

1730s

The Lower Counties survive as a distinct political entity despite several claims, the most forceful of which are made by Charles Calvert, Fifth Lord Baltimore.

1739

The town of Wilmington, which has previously been a commercial settlement known as Willingtown, is chartered. The urban plan follows that of Philadelphia: a rectangle laid out on the banks of a river. In 1739 Wilmington's population is 600; by the outbreak of the War for Independence, it may be as high as 2,000.

Also in 1739, the Reverend George Whitefield arrives in Delaware, preaching to large crowds and inspiring the sort of religious revivals that will eventually come to be called the Great Awakening. The response to Whitefield, however, is muted in Delaware because of the number of Anglicans in the population.

1754–1763

During the French and Indian War, Pennsylvania accuses Delaware of not aiding appropriately in matters of defense. The quarrels continue after the war is over.

Early 1760s

The Academy of Newark opens in New Castle County. The institution, similar in curriculum to other colonial colleges, will eventually become the University of Delaware.

1764

The boundaries of Delaware, most significantly the troublesome western boundary with Maryland, are surveyed and marked by none other than Charles Mason and Jeremiah Dixon. Just before the War for Independence breaks out, Delaware takes on its final shape.

1765

Delaware's reaction to the Stamp Act is much more muted than those of Philadelphia, Boston, and other colonial cities. The assembly cautiously insists on maintaining English rights and liberties, while remaining loyal to the king.

1767–1768

John Dickinson, who has lived in both Delaware and Pennsylvania, publishes the widely read *Letters from a Farmer in Pennsylvania to the Inhabitants of the British Colonies*, which criticizes imperial taxation.

1770

Tobacco, which has been an important factor in the settlement of Delaware, declines in importance, and, in fact, ceases to be cultivated in the colony. Correspondingly, slavery reaches its peak in the years before the American Revolution and will decline throughout the early national period.

1774–1775

The Lower Counties participate actively in the Continental Congresses, and their leadership includes such revolutionaries as Caesar Rodney. Still, there is a significant loyalist population in Delaware. The outbreak of hostilities moves most of Delaware's residents into the patriot camp.

1776

The Delaware assembly, meeting at New Castle under the guidance of Caesar Rodney, votes to sever all ties with the British Crown. Rodney also plays an instrumental role (though his famous horseback ride to rush to their side is probably fictional) in convincing the Delaware delegation to Philadelphia to vote for independence on July 2.

Matthew Jennings

French Colonies on Mainland North America

1491

Christopher Columbus, seeking patronage for Atlantic exploration, plans to join his brother Bartholomew at the French court of King Charles VIII if his final effort to win the support of Queen Isabella of Castile fails.

1492

Bartholomew Columbus is still seeking French financial backing when his brother gains the sponsorship of Castile and sails with three ships in August.

1493

In March, Christopher Columbus returns from his trans-Atlantic voyage, believing he has reached the Indies (having, in fact, been in the Caribbean). At Queen Isabella's request, Pope Alexander VI validates Castile's claims to new lands and demarcates the areas of exploration between Castile and Portugal to the exclusion of all other nations, including France.

1494–1495

King Charles VIII of France does not protest the papal decree since his interests center on the established trade routes of the Mediterranean. He leads an invasion of the Italian peninsula and sets the pattern for the next quarter century, whereby the French monarchy will become embroiled in a struggle to dominate Italy.

1497–1498

John Cabot, commissioned by King Henry VII of England, explores Newfoundland and its cod-rich waters, which will draw French fishermen, among others.

1506–1508

While King Louis XII of France continues to pursue French interests in Italy, individual Frenchmen become involved in Atlantic trade and exploration. In 1506, Jean Denys of Honfleur and, in 1508, Thomas Aubert of Dieppe, explore the coast of Newfoundland. Aubert returns to Rouen with seven Native Americans.

1523

Antonio Pigafetta, who has accompanied and chronicled the Magellan expedition's circumnavigation of the globe from 1519 to 1522, visits the court of King Francis I. The French king becomes interested in exploration and commissions the Florentine Giovanni da Verrazano to find a northwest passage to the Orient.

1524

In January, Verrazano sails in the royal vessel *La Dauphine* and makes landfall on the North American coast, which he explores from Florida to Cape Breton, Nova Scotia, including New York harbor. He names the lands Francesca in honor of his royal patron and returns to Dieppe in July. There is no papal support, however, for French claims to the discoveries, nor does Francis, involved in European warfare, sponsor Verrazano again.

1533

French officials persuade Pope Clement VII to revise the prior papal division of the world so that France can now claim any new lands it discovers.

1534

In March, King Francis I commissions Jacques Cartier, an experienced seaman, to explore beyond Newfoundland. In April, Cartier sails from his native Saint-Malo with two ships and, twenty days later, makes landfall. He explores the west coast of Newfoundland, Prince Edward Island, Chaleur Bay, and the Gaspé Peninsula, and claims these lands for France. He trades for furs with Native Americans and returns to Saint-Malo on September 5.

1535

King Francis sponsors a second voyage by Cartier, who sails with three ships in May. In September, the expedition sails up the St. Lawrence River to the native village of Stadacona, close to the future site of Quebec City. Cartier leads a party farther upriver to the native village of Hochelaga, near a mountain he names Mont Réal. At Sainte-Croix, their base camp near Stadacona, the French expedition endures a harsh winter before returning to France the following year.

1541

King Francis chooses Jean François de La Roche, Sieur de Roberval, to act as his lieutenant general in establishing a French colony in North America. Cartier is to serve under Roberval, but the two cross the Atlantic separately. Cartier, with five ships, sails on May 23. He goes beyond Sainte-Croix to found a new settlement, Charles-Bourg, but the settlers provoke hostilities with Native Americans.

1542

After a difficult winter, Cartier decides to return to France. Roberval, delayed in his preparations, finally sails from La Rochelle on April 16 with three ships and 200 men and women. On June 8, the two French parties cross paths off Newfoundland, but Cartier refuses to remain in North America. Roberval continues on to Charles-Bourg, where his settlers face a disease-ridden winter. After Cartier's return to France without any gold, Francis sends ships to bring back Roberval and his colonists the following year.

1547–1594

King Henry II, embroiled in ongoing European conflicts, does not sponsor colonization in North America, nor do his sons—Francis II, Charles IX, and Henry III. Instead, beginning in 1562, the French monarchy is weakened by a series of civil and religious wars in which French Calvinists, called Huguenots, fight for religious freedom. Upon the death of Henry III, the French throne passes to Henry of Bourbon, the leader of the Huguenots. When the Catholic majority does not readily accept a Protestant king, the pragmatic Henry IV converts to Catholicism in 1593 and triumphantly enters Paris in 1594.

1598

To end religious strife, King Henry grants the Huguenots religious toleration by the Edict of Nantes. He also revives the idea of a permanent French establishment in North America.

1599

Pierre de Chauvin, commissioned by Henry IV, makes two subsequent voyages of exploration, seeking suitable sites for settlement.

1603

In January, Henry convenes a commission at Rouen to discuss colonization, and, in November, he names Pierre de Gua, Sieur de Monts, who has sailed with Chauvin, to be his lieutenant general in "Acadia." Monts and his associates in the Company of New France are to found permanent settlements. In return, they are to enjoy a monopoly on the fur trade for ten years, although Henry, due to pressure from other merchants, will withdraw this privilege prior to its expiration.

1605

Samuel de Champlain, France's royal geographer, who has traveled through Spanish America and sailed the St. Lawrence with Chauvin, helps Monts establish a French colony at Port Royal (now Annapolis Royal, Nova Scotia).

1607

The first permanent English settlement in North America is made at Jamestown, Virginia.

1608

After exploring and mapping the region, Champlain lays the foundation for Quebec City on the St. Lawrence.

1609

Champlain establishes good relations with the Algonquin and Huron, and he joins them in their warfare against the Iroquois, who become enemies of the French. Champlain explores farther south, reaching the lake that today bears his name. The English navigator Henry Hudson, employed by the Dutch, sails up the river now named for him (first sighted by Verrazano in 1524). Dutch settlements on Manhattan Island and along the Hudson will constitute New Netherland.

1610

Champlain returns to France to gain additional support for Quebec, as he will continue to do for the next quarter century. The fur trade, however, is more lucrative for French merchants than permanent colonization, so the number of colonists will remain small. Missionaries, especially Jesuits, will play a major role in French colonial expansion as they work to convert Native Americans to Roman Catholicism. Henry Hudson, now employed by England, explores the straits and a large bay far to the northeast also named for him.

1615

Champlain, again joining the Huron against the Iroquois, journeys across Lake Ontario.

1620

English Puritans aboard the *Mayflower* land at Plymouth, Massachusetts, and establish the first colony in New England.

1621

King James I of England grants Nova Scotia to William Alexander. This puts the English in direct competition with the French, who claim this region as part of Acadia.

1627

Cardinal Richelieu, chief minister to King Louis XIII, interested in improving French commerce, authorizes a new Company of New France, led by Isaac de Razilly, to help forward Champlain's plans for colonial expansion.

1629

Warfare between England and France in Europe spills over to North America when an English military expedition forces Champlain to surrender Quebec.

1632

Peace negotiations result in the return of Quebec to France. Champlain is accompanied back to Quebec by a French squadron commanded by Razilly.

1634

Champlain founds a trading post at Trois-Rivières.

1635

Samuel de Champlain, considered the father of New France, dies in Quebec. This same year, the Jesuits found a college there.

1642

Paul de Chomedey, Sieur de Maisonneuve, founds Ville-Marie, a permanent settlement at the confluence of the St. Lawrence and Ottawa Rivers, beneath Cartier's Mont Réal. The settlement, soon called Montreal, will become a center for the fur trade and a base for further exploration and missionary work.

1660

The first Catholic bishop appointed to Quebec, François Xavier de Laval-Montmorency, reports that there are twenty-six priests (mostly Jesuits), two orders of nuns, eleven churches, and a population of some 2,000 settlers in New France.

1663

Louis XIV makes New France a royal province. The first intendant, or royal administrator, at Quebec is Jean Talon. Under the direction of Louis's finance minister, Jean-Baptiste Colbert, Talon advances a program to encourage settlers to emigrate from France. The population will grow to about 7,000 in ten years, although the fur trade will remain the mainstay of the economy despite some diversification.

1664

The English fleet takes New Amsterdam. New Netherland will become New York.

1670

King Charles II of England grants the Hudson's Bay Company exclusive trading rights to the Hudson Bay territory, which threatens the French fur trade monopoly.

1672

Louis de Buade, Comte de Pallau et de Frontenac, begins a ten-year term as governor of New France, during which time he will encourage further exploration and expansion westward, while keeping the Iroquois in check.

1673

Jacques Marquette, a French Jesuit missionary, and explorer Louis Jolliet journey to find the great river of which the native peoples speak. Beginning in Wisconsin, they explore the Mississippi River by canoe as far south as the confluence of the Arkansas, establishing that the Mississippi flows into the Gulf of Mexico.

1682

René-Robert Cavelier, Sieur de La Salle, explorer and frontier commander, follows the Mississippi to the Gulf of Mexico and claims the area for France, naming it Louisiana after King Louis XIV. The French claim to the continental heartland will bring them into conflict with the English colonists migrating westward from the Atlantic seaboard.

1684–1687

In 1684, La Salle sails from France to the Gulf of Mexico with 300 settlers to found a colony at the mouth of the Mississippi. In 1685, the ill-fated expedition lands 400 miles off-course at Matagorda Bay on the Texas coast. The settlers succumb to disease and hostile Native Americans, while La Salle fails to locate the Mississippi and is killed by his own men in 1687. The few survivors return to Montreal on foot.

1685

King Louis XIV revokes the Edict of Nantes. Some Huguenot émigrés settle in the English colonies in coastal towns from Boston to Charles Town.

1689

The Comte de Frontenac, returned as governor of New France, faces the hostilities of both the English and the Iroquois in King William's War, the colonial counterpart to the War of the League of Augsburg (1689–1697) being fought in Europe.

1690

In May, Sir William Phips of Massachusetts leads a successful attack on Port Royal, but his summer expedition against Quebec fails.

1698–1701

Pierre Le Moyne, Sieur D'Iberville, the victor in several naval actions against the English in Canada in the recent war, sails with an expedition from France in 1698. He establishes settlements at the mouth of the Mississippi River and builds forts at Biloxi and Mobile. D'Iberville is appointed governor of Louisiana.

1701

The Iroquois sign a peace treaty with the French. Antoine de la Mothe, Sieur de Cadillac, establishes Fort Pontchartrain du Detroit (present-day Detroit, Michigan) on Lake Claire with access to Lake Erie.

1702

The War of the Spanish Succession (1702–1713) begins in Europe. Known as Queen Anne's War in the colonies, it is fought between the French and British in Canada and New England.

1711

The planned British naval assault on Quebec fails when eleven ships are lost in the St. Lawrence River. This loss, in turn, halts the coordinated land expedition of New Englanders and Iroquois against Montreal.

1713

By the Treaty of Utrecht, the British receive Hudson Bay, Newfoundland, and Acadia (Nova Scotia) except for Cape Breton Island, where the French build the fortress of Louisbourg to guard the entrance to the St. Lawrence.

1717–1720

Philip II, Duke of Orléans, regent for King Louis XV, and facing huge debts left by Louis XIV's wars, follows the financial advice of Scottish financier John Law and establishes the Bank of France. Law creates the Company of the West, known as the Mississippi Company, to develop Louisiana. Given a monopoly on trade with Louisiana and eventually on all French foreign trade, the company experiences high demand for its stock and founds New Orleans in 1718. Wild speculation reaches its peak in 1720, when the bubble bursts and the stock declines precipitously, discrediting the company and all of Law's fiscal reforms for France.

1738

As fur traders move westward from the Great Lakes, the French build Fort Rouge (Winnipeg, Manitoba) on the Red River.

1745

King George's War (1744–1748), the North American portion of the larger War of the Austrian Succession (1740–1748). Governor William Shirley of Massachusetts orders William Pepperrell, a local merchant and official, to lead an expedition against Louisbourg on Cape Breton Island. With the assistance of the British navy, Pepperrell's colonial forces take the massive French fortress in June.

1748

By the Treaty of Aix-la-Chapelle, Great Britain returns Louisbourg to France.

1754

The French in North America, who number only some 75,000, are concerned about protecting their lands against expansion by the more populous (1.2 million) British colonists. To ensure a link between Canada and Louisiana, the French begin fortifying the Ohio Valley and build Fort Duquesne at a fork on the Ohio River. Virginians counter by building Fort Necessity, but a French attack in July forces the commandant, George Washington, to surrender his post.

1755

British General Edward Braddock, commanding British regulars and colonists, attempts to take Fort Duquesne in July. He is killed and his forces suffer high casualties when they are ambushed by the French and their Native American allies. The British, fearing an uprising among the French inhabitants of Nova Scotia, force the Acadians to relocate throughout the British colonies. Those who resettle in Louisiana later become known as Cajuns.

1756

The Seven Years' War (1756–1763) begins in Europe; the colonial counterpart is the French and Indian War, which, in fact, began in 1754. The French commander in New France is Louis Joseph, Marquis de Montcalm, who, taking the offensive, destroys the British fort and settlement at Oswego on Lake Ontario in New York.

1757

Montcalm, from his base at Fort Ticonderoga, captures Fort William Henry on Lake George, New York.

1758

The British Prime Minister, William Pitt (the Elder), is committed to defeating the French in North America. He relies on two talented officers, Jeffery Amherst and James Wolfe, who take Louisbourg in July, thus cutting Canada's main supply line with France. The French fortresses in the Ohio Valley and on the Great Lakes begin to fall to the British; these include Fort Duquesne, renamed Fort Pitt (present-day Pittsburgh, Pennsylvania). Montcalm falls back to the St. Lawrence.

1759

While Amherst takes Forts Ticonderoga and Crown Point in northern New York, Wolfe besieges Montcalm at Quebec. When the siege proves ineffective, the British climb an unguarded approach to Quebec, enabling them to surprise the French on the Plains of Abraham. On September 13, the British rout the French, but both Wolfe and Montcalm die in the action.

1760

On September 8, French Governor Pierre de Vaudreuil surrenders to Major General Amherst at Montreal.

1763

By the Treaty of Paris, Britain gains Canada and all lands east of the Mississippi River. The Louisiana territory to the west of the Mississippi passes to Spain. France no longer has colonies in North America.

1774

By the Quebec Act, the British government allows the French inhabitants of Canada to keep French civil law, their language, and their Catholic faith. The boundaries of Quebec are extended to include the Ohio Valley. The American colonists consider this act as part of the "Intolerable Acts" against their interests. The act, however, will help keep the French Canadians loyal to Britain during the American Revolution.

1778

The French government of King Louis XVI, seeing an opportunity to avenge the loss of its North American colonies and to weaken its traditional enemy Great Britain, signs a treaty supporting the United States in the American Revolution.

1783

French assistance has helped the United States gain independence from Great Britain. Independence is granted by the Treaty of Paris.

1800

Spain agrees to cede the Louisiana territory back to France by the secret Treaty of Ildefonso.

1803

Napoleon, First Consul of France, sells the Louisiana territory, including the port of New Orleans, to the U.S. government under President Thomas Jefferson for \$15 million. The size of the United States is doubled, and France never again will be a colonial power in North America.

Florene S. Memegalos

Georgia

700s–1400s c.e.

The Mississippi culture of Native American mound builders thrives in the northern reaches of Georgia.

1400s–1600s

The Cherokee people push into the region from the north and east, forcing the Creek to move westward into what is now western Georgia and Alabama.

1566

Spanish missionaries moving north from Florida establish fortified outposts along the Atlantic coast, naming the region Guale. This expansion establishes Spain's lasting claim to the land in later years.

1686

Under pressure from the Native American allies of England and plagued by pirates, missionaries have long since begun pulling out of Guale, seeking the safety of other Spanish colonies. Military authorities consider Guale indefensible. By the end of this year, the Spanish withdrawal from the territory is complete.

1717

A Scottish baronet named Robert Montgomery proposes a new settlement below South Carolina in the area formerly known as Guale. Called Azilia, the project gets a favorable response from imperial sources but collapses due to money problems. Many of Montgomery's ideas—compact townships, citizen soldiers, silk production—are later used in the development of Georgia.

1732

King George II grants a twenty-one-year charter to the Trustees for Establishing the Colony of Georgia in America. Unable to raise sufficient funds to begin settlement, the trustees petition Parliament for a grant of 10,000 pounds. Over the next twenty years, the British government spends approximately 236,000 pounds on the colony's needs. Georgia thus becomes the first British colony funded from the beginning by public monies.

James Oglethorpe, one of the British trustees, leads the initial settlement effort on the journey across the Atlantic Ocean.

1733

James Oglethorpe, who is a philanthropist, publishes a pamphlet promoting Georgia as a place of exile and refuge for insolvent debtors and criminals to

reform themselves through hard work. The first wave of settlers, including such debtors and criminals, establishes Savannah, which will become the province's leading port and political center. Though relations between the two settlements will soon sour, South Carolina initially supports its new neighbor by donating rice and cattle to help feed the newcomers.

1734

Tomo-chi-chi, chief of the Yamacraws, accompanies James Oglethorpe to England and meets with leading British officials.

A group of Protestant Salzburger exiles, under the leadership of Baron Philip Georg Friedrich von Reck and Johann Martin Bolzius, seeks refuge in Georgia. They establish the town of Ebenezer upriver from Savannah.

1735

The only three laws ever enacted under the Georgia trustees go into effect: One prohibits rum, another bans slaves, and a third regulates trade with Native Americans. South Carolina begins a lengthy and bitter protest over these policies, which the older colony sees as deliberately discriminating against Charles Town merchants.

The first organized pro-slavery letter, drawn up by a handful of settlers near Savannah, arrives in London.

The town of Augusta is established in the Georgia upcountry at the falls of the Savannah River. It quickly becomes the focal point for the colony's trade with Native Americans.

1736

On his second journey to Georgia, James Oglethorpe places the defensive settlement of Frederica on St. Simon's Island, at the southernmost portion of the colony.

Reverends John and Charles Wesley, who find fame in England as the founders of Methodism, arrive in Georgia as Christian missionaries. Frustrated by the religious apathy and constant bickering in Frederica, Charles Wesley returns to England in June, wanting nothing more to do with America.

1737

John Wesley, whose American religious mission ran afoul of political factionalism and a broken engagement scandal, also returns to England.

1738

A strongly worded petition, demanding a revision in land tenure rules and the legalization of slavery, is signed by 119 Georgia residents and delivered to London. The Georgia trustees dismiss the complaints of discontented colonists as coming from a handful of lazy and worthless "malcontents." The Germans at Ebenezer and Scottish Highlanders at Darien submit counterpetitions, supporting the slavery ban.

James Oglethorpe makes his third and final trip to Georgia, this time, as commander of the 42nd Regiment of Foot.

1740

After Spain and England declare war, Oglethorpe leads Georgia and South Carolina troops on an unsuccessful campaign against the Spanish fort at St. Augustine.

Following in the footsteps of the Wesleys before him, George Whitefield disembarks in Savannah and opens the Bethesda Orphanage for children. Whitefield then launches his famous tour of the American colonies, which helps fuel the eighteenth-century surge in religious sentiment known to future generations as the Great Awakening.

1741

Patrick Tailfer and several other pro-slavery malcontents publish *A True and Historical Narrative of the Colony of Georgia* in Charles Town and London. The pamphlet is a scathing indictment of trustee land and labor policies and portrays the colony's leaders as simultaneously malevolent and incompetent. This publication initiates a two-year print war between the malcontents and the Georgia trustees over who is to blame for the province's stagnant economy.

In order to govern the colony more effectively, the corporation splits Georgia into the districts of Savannah and Frederica.

1742

The Georgia malcontents in Savannah elect Thomas Stephens, son of the colony's secretary, to be their agent in London. The younger Stephens launches blistering criticisms of trustee policies in the press and in letters to British officials, and he successfully lobbies for a parliamentary investigation of Georgia's administration. Stephens's effectiveness as a representative ends in June when he is reprimanded and humbled on the floor of the House of Commons for impugning the reputations of the trustees.

In Georgia, the colony's future is threatened by a numerically superior Spanish invasion force that moves to capture Frederica as a prelude to marching on Savannah. Based on a combination of strong leadership, disinformation, and sheer luck, Oglethorpe convinces the Spanish commander that he must retreat to St. Augustine.

1743

After another failed attempt to capture St. Augustine, Oglethorpe returns to England to face an inquiry into his command decisions. He never again sets foot in America.

The trustees reorganize the colonial government by abolishing the district of Frederica and appointing their secretary, William Stephens (father of malcontent Thomas), to be the president of the entire province.

Savannah becomes the unquestioned capital of Georgia. Settlers petition the trustees for establishing the Colony of Georgia in America to permit slavery in the colony.

1749

Mary Musgrove Bosomworth, a Native American interpreter sometimes referred to as the "Queen of the Creeks," and her husband, Thomas, lay claim to several lush islands off the Georgia coast, based on their negotiations with local tribes. The dispute caused by the Bosomworth claims leads to deep divisions and factionalism in the province that linger for a decade before the issue is settled through compromise.

1750

Helpless to enforce a slavery prohibition in light of widespread colonial disregard of trustee policies, the Georgia Trust agrees to legalize the importation and ownership of African slaves. Georgia rapidly develops a plantation economy—growing rice, indigo, and long-staple cotton—modeled after that of South Carolina.

1751

Georgia's first elected assembly meets in Savannah. Charged by the trustees with providing information to England about the colony's needs, the assembly is authorized only to offer advice and make suggestions about what should be done. Frustrated by the Georgia board's monopolization of power in London, representatives ask for the power to make laws—a request firmly rejected by the trust.

1752

Unable to obtain further parliamentary funding and finding that most of their orders are ignored in Georgia, the trustees surrender their charter to the king a year before it is due to expire.

Puritans from Dorchester, South Carolina, emigrate en masse to the region surrounding the Midway River, adding large family groups and numerous slaves to Georgia's population.

1754

After a two-year interregnum, wherein holdover trustee officials govern by default, Governor John Reynolds arrives to implement royal control over the colony. The new royal council contains the leading incumbent government officials, giving the province a sense of continuity that some find refreshing and others find exasperating.

Italian silk workers establish silk production in Savannah. The project will prove economically unviable and will be abandoned in 1771.

1755

Georgia's first official legislative assembly convenes in January. Among other actions, it enacts the colony's first slave code, using South Carolina's as a model.

Unhappy with the outcome of the controversial and disputed lower house elections, candidate Edmund Gray and his followers leave Georgia proper and establish the town of New Hanover on contested land that the Spanish claim as part of Florida. The settlement creates diplomatic tension between the two nations for the next few years, as Spanish leaders in St. Augustine suspect that the settlement is a disguised act of British aggression.

1756

French-speaking Acadians expelled from Nova Scotia at the beginning of the French and Indian War arrive in Georgia. They are met with distrust and hostility.

1757

Governor Reynolds, a victim of his own political inexperience and excessive favoritism shown to his friend William Little, is recalled to England for examination by royal authorities. Lieutenant Governor Henry Ellis, a noted scientist and naturalist, assumes acting command of Georgia until he is officially elevated to the governorship the following year.

1758

After much debate and opposition, the Georgia Assembly establishes the Church of England as the official church in the province.

1760

Complaining that the hot Southern air has reduced his health, Henry Ellis leaves Georgia and soon obtains a posting as governor of Nova Scotia. Lieutenant Governor James Wright assumes command of the colony and is officially named to the governorship the following year. Wright will be the third and final governor of the Georgia colony.

1763

Savannah printer James Johnston launches the *Georgia Gazette*, the settlement's first regular newspaper.

The Creek people agree to cede approximately 2.4 million acres of land on the western and southern frontiers of the colony. Believing that the ceded Native American lands are part of Carolina's original charter, South Carolina governor Thomas Boone grants 90,000 acres of prime land to applicants from his province. Wright carries Georgia's protests against these claims to royal authorities in London, but the controversy remains unsettled through the Revolution and adds new fuel to the existing bitterness between the neighboring colonies.

1765

The Stamp Act passed by the English House of Commons evokes dire predictions from residents who believe that the burdensome tax will devastate Georgia's budding economy. The Liberty Boys hold their first meeting at McHenry's Tavern in Savannah to formulate opposition to the stamp measure. In November, crowds take to the streets of Savannah and other cities and towns to nonviolently yet vehemently protest the new tax.

1766

With the backing of his council and some local merchants, Lieutenant Governor Wright issues port clearances on stamped paper, making Georgia the only one of the colonies to enforce the stamp duty. After this symbolic gesture, Wright suspends further enforcement measures, pending Parliament's anticipated repeal of the measure.

When word arrives that Parliament has removed the Stamp Act, Reverend John J. Zubly preaches an influential sermon outlining the essential injustice of the tax and congratulating the mother country for seeing the justice of colonial arguments. Zubly's "The Stamp Act Repealed" is well received and is published in Savannah, Charles Town, and Philadelphia.

The Georgia lower house removes colonial agent William Knox from his position for writing a pamphlet endorsing Parliament's view of taxation.

1768

The *Georgia Gazette* reprints John Dickinson's *Letters from a Farmer in Pennsylvania*, a critique of imperial taxation written in light of the recently passed Townshend Acts. The year's assembly elections are marred by the threat of violence, as numerous voters carry weapons with them to the polls. Wright notes with regret that Dickinson's writings have "Plentifully Sown the Seeds of Faction & Sedition" in Georgia.

1769

A mass meeting in Savannah leads to the proposal of a nonimportation agreement with England in order to pressure the mother country into respecting colonial liberties.

1772

James Habersham, acting as governor while Wright is in England, dissolves the assembly in April 1772 because of the lower house's choice of Speaker. The third such legislative dissolution in thirteen months, this action is blamed on the Georgia assembly's perceived radicalism.

1773

Despite political unsettlement, Georgia's growth continues at a rapid rate. The Creek and Cherokee cede 2.1 million acres adjacent to the land handed over in the 1763 negotiations, giving the province enough land to sustain population expansion for the near future.

For the first time, recorded exports from Georgia exceed 100,000 pounds.

In a comprehensive survey of the colony, Wright finds that the number of inhabitants has grown to 18,000 whites and 13,000 slaves—nearly ten times the size of the population in 1754.

1774

Georgians react with mixed feelings to the passage by Parliament of the Intolerable Acts, which are designed to punish Massachusetts for the Boston Tea Party. Public meetings in July and August resist cooperation with other colonies; as a result, the Continental Congress convenes in Philadelphia minus any representatives from Georgia. Acting independently, St. John's Parish votes to send Dr. Lyman Hall to Philadelphia to monitor the proceedings, but Hall refuses to accept based on such uncertain authority.

1775

Georgia patriots finally organize themselves enough to summon a provincial congress in January. Over the course of the year, this body slowly usurps the powers exercised by Wright and the royal government.

When news of the battles of Lexington and Concord arrives on May 10, the people of Savannah are energized. The following night, Sons of Liberty break into the public magazine and strip it of most of its weapons and gunpowder.

Parochial committees in each parish replace the royal courts as the main judicial institutions in Georgia, and a newly created Council of Safety helps coordinate the activities of the various committees. At the Council of Safety's urging, militia units remove commanders loyal to Wright and the king and replace them with patriot officers.

1776

In January, British ships appear off the coast of Georgia. Fearing that Wright might conspire with naval officers, the Council of Safety orders him arrested and confined to Savannah.

In February, Wright slips away from his captors, fleeing to the protection of the British navy. His departure completes the transfer of power in Georgia from the British authorities to the colonists.

Andrew C. Lannen

Maryland

Prior to the Arrival of Europeans

The native population of the area that will become Maryland is hard to determine. Conservative estimates place the number at around 10,000. Most of the region's Native Americans speak languages related to Algonquian, but the Susquehanna speak a language similar to those of the Five Nations of the Iroquois. The Western Shore tribes include the Doeg, the Mattawoman, and the Patuxent. During the era of European colonization, most of these will fall under the jurisdiction of the Piscataway. The Eastern shore also is home to the sizable towns of the Nanticoke.

1629

George Calvert, Lord Baltimore, a Catholic nobleman, applies to King Charles I for a piece of Virginia on which to establish a colony. The king is lukewarm at first, but later agrees, over the objections of Virginians.

1632

Calvert dies, leaving his title and the work of establishing Maryland to his son Cecilius, who is still in his 20s. The charter of Maryland is not particularly clear concerning the boundaries of the colony; it will take a number of lawsuits to determine those boundaries in coming years. What is made clear, though, is the role that Lord Baltimore will play in the colony. In addition to millions of acres of land, Charles I gives him near-total authority over its settlement and government, naming Calvert as lord proprietor of Maryland.

1633–1634

The Calvert expedition prepares and leaves for Maryland. The first two ships carry about 130 people, including women, which early Virginia forays had not. Although Calvert does not make his intentions clear, he seems to conceive of Maryland as a haven for England's persecuted Catholics, as well as a means through which to increase his family's estate. Cecilius's younger brother Leonard becomes the first governor. On March 25, 1634, the party lands, erects a gigantic wooden cross, and celebrates Mass.

The early years of the Maryland colony differ from that of Virginia in several key aspects. There is not really a "starving time" in Maryland, as the settlers immediately plant enough corn for their own consumption with a small surplus. They also plant tobacco right away, securing the colony's financial future.

Lord Baltimore intends to set up a network of manors in Maryland. To this end, he drafts his "Conditions of Plantation," which states that anyone who can transport five laborers to Maryland will receive 2,000 acres of land. By the 1640s, only a handful of these large landholdings exist. Another, more popular option is the headright system, whereby individual planters receive land for settling servants and families in Maryland.

Finally, apart from sporadic violence, Maryland maintains peaceful relations with neighboring native tribes. Nevertheless, Maryland's Native American population will decline precipitously in the face of European disease, dispossession, and trade dependency. Fifty years after the English colony of Maryland is founded, few Native Americans will remain.

1635

Virginia and Maryland colonists clash in two minor naval battles, a result of the fact that Maryland was established in territory that had earlier been promised to Virginia. English authorities step in, and a tenuous peace ensues.

The provincial assembly meets for the first time on February 26 in St. Mary's City. The legislative body immediately sets about making laws, but Lord

Baltimore conceives of its function differently. In his view, he will make the laws, and the Assembly can approve them or suggest changes.

1637

Tobacco becomes the de facto currency of Virginia. Demand for the crop is high, prices are high, and planters keep accounts, settle debts, and pay taxes with tobacco.

Also in 1637, Jesuits run afoul of Lord Baltimore when they begin to trade with Native Americans and negotiate land deals, a power expressly granted to the lord proprietor.

1638

Maryland's second assembly meets in January, and again runs into conflict with Lord Baltimore's desires for the colony. In theory, the assembly is a gathering of all free men in the colony, but many men depart the council after a day or two, in essence leaving behind a representative body. The assembly votes against Baltimore's veto of the earlier laws, and forwards its own statutes to him. The conflict is not as bitter as it may seem; the code of laws eventually includes measures proposed by Lord Baltimore.

1639

A more regular body of legislators meets at St. Mary's City; these men are chosen by constituents from their home areas. Governor Calvert also personally summons five men to sit as an advisory council, which would later become the Council of State.

1642

Records indicate that the first Africans are imported into St. Mary's City around this date. For fifty years, however, Maryland's planters rely mainly on European indentured servants.

1643

Governor Calvert commissions an abortive expedition against the Susquehannas; the two forces fight to a stalemate. The uneasy truce between Maryland and the Susquehannas survives Opechancanough's devastating 1644 attack on Virginia's English settlements.

1645

During the English Civil War, Richard Ingle, a supporter of Parliament, wrests control of Maryland's government from the Calverts. Governor Calvert regroups in Virginia and returns with a sizable army, only to find that Ingle himself has sailed back to England. Proprietary control is secure for the time being.

1648

Lord Baltimore appoints a Protestant, William Stone of Virginia, to the post of governor. One of Stone's first acts is to extend religious toleration to a group of Puritans, who have fled persecution at the hands of Virginia's Anglican governor, William Berkeley.

1649

Both William Stone and William Berkeley run afoul of Parliament when they declare Charles II the legal sovereign following the execution of Charles I.

The first "Act Concerning Religion" guarantees toleration to all sects of Christianity within the boundaries of Maryland.

1650

The Assembly divides into two distinct houses when the elected representatives get their own meeting chamber and speaker.

1654

A group of ten Puritan commissioners convenes at Patuxent and begins to govern Maryland as a Puritan commonwealth, outlawing Catholic religious practices, as well as drunkenness, swearing, and fornication. Interestingly, back in England, Cromwell sides with Lord Baltimore and reprimands the Puritan Commission.

1655

Governor Stone attempts to regain his position. When his forces engage those of the Puritans at the Battle of the Severn, the proprietary party is forced to retreat after losing almost fifty men. Stone and his council are held prisoner for more than a month. Troubles continue until 1657, when Lord Baltimore and Richard Bennett of the Puritans sign a treaty ensuring general amnesty and the return of the original "Act Concerning Religion."

1660

In an event known as Fendall's Rebellion, Governor Josias Fendall meets with both his council and the lower house of the Assembly as a single body, essentially handing over the government to the speaker of the Assembly. Lord Baltimore responds by appointing his younger brother Philip as governor of

Maryland. Charles II's restoration also discourages those hoping to establish some sort of commonwealth in Maryland.

1661

After King Charles II is returned to the English throne, Cecilius Calvert's son and heir, Charles, becomes governor. He shares his father's authoritarian philosophy and will rule until 1684, when he returns permanently to England.

1666

George Alsop, a former indentured servant from Baltimore County, publishes *A Character of the Province of Maryland*. The pamphlet describes Maryland as a land of plenty, which in some cases is true, but overlooks the miserable lives of many of the colony's indentured servants.

Also in 1666, in the midst of a severe tobacco price crisis, Maryland and Virginia planters agree to cease planting tobacco for a full year, hoping that ridding the market of excess tobacco will raise prices to an acceptable level. Governor Calvert is behind the plan, but Lord Proprietor Calvert vetoes the agreement.

1672

George Fox, the founder of the Religious Society of Friends, oversees a number of Quaker meetings in Maryland. Eventually, Quakers, renowned for their sobriety and honest dealing, will make up an important component of the colony's merchant class.

1675

Cecilius Calvert dies in England, and Charles Calvert, the third Lord Baltimore, returns to England for two years, leaving his 9-year-old son Cecil—more accurately, the boy's regents—in charge of Maryland. Opponents of proprietary government seize the opportunity.

1676

A corollary to Bacon's Rebellion disturbs the peace in Maryland, when a group of Protestant planters, worried about Native American attacks, appear to threaten to overthrow the government because of a perceived failure on the government's part to protect planters from such attacks. In reality, native communities in Maryland are too weak and dependent to pose a significant threat.

1682

Charles Calvert meets with William Penn in an effort to solve a boundary dispute. Not only has the city of Philadelphia been laid out within the original limits of the Maryland proprietorship, but the Duke of York (later King James II) has granted Penn Delaware (or the Lower Counties) as well. The meeting does not accomplish anything, and in 1684 Calvert leaves for England to advance his claims.

1688

Lord Baltimore appoints William Joseph, a Catholic, as governor. Joseph addresses the Assembly, and the results are disastrous. He implores the legislators to take various oaths of allegiance and to set aside the prince's birthday as a holy day each year. He also accuses the representatives, and the residents of Maryland in general, of drunken and adulterous conduct.

1689

In the midst of the turmoil in Maryland's government, news arrives from England that James II has been replaced on the throne by William and Mary. In July, the Protestant Association, a hastily thrown together group that opposes the proprietary, essentially overturns Lord Baltimore's government without firing a shot. The Associators, as they are sometimes labeled, quickly pass a law forbidding any Catholics to occupy the colony's civil or military offices. Throughout the colony, new elections are held.

1690–1691

Maryland becomes a royal colony when Lionel Copley is appointed governor by William of Orange. The Associators, generally speaking, welcome Copley, a staunch Protestant.

1692

The first Assembly convenes under royal government, passing a large number of acts, many simply continuing earlier legislation. One major exception is an act that establishes the Church of England in the colony, but this does not actually go into effect for another ten years.

1693–1694

In 1693 Governor Copley dies and is replaced by Francis Nicholson, an experienced and skilled colonial administrator. In 1695 Nicholson is instrumental in designing the new capital, Annapolis.

1697

The African American population of Maryland stands at about 3,000, of a total population of about 30,000. In the decades that follow, Maryland planters

will come to rely increasingly on slave labor, and ever-increasing numbers of Africans will be imported. By 1710, the slave population is nearly 8,000. This influx of labor helps to solidify the planter class in power, as well as to increase the average size of plantations.

1715

In the aftermath of the War of the Spanish Succession, royal government in Maryland comes to a sudden end. Queen Anne's death in 1714 paves the way for an obscure German prince to become King George I of England. Benedict Leonard, Charles Calvert's Protestant son, becomes Lord Baltimore and dies eight weeks later. His young son Charles, the new Lord Baltimore, is now heir to Maryland.

Maryland retains many of the characteristics that had marked the "royal period" of its history. The Assembly remains strong, and Marylanders are increasingly wary of factors that might infringe upon their rights.

1718

The last remnants of religious toleration vanish from Maryland as the Assembly disfranchises Catholics, requiring those who wish to vote to take an oath.

1722-1725

The Assembly begins to divide along lines that will become clearer as the eighteenth century progresses. Though political parties do not really exist, country and court interests collide. The country party claims to stand for the welfare of the entire colony, and it casts the court party as a tiny pocket of councilors and high officials surrounding the governor.

1726

William Parks arrives in Annapolis and opens a printing house. He quickly earns contracts for post office functions, printing the acts of the legislature. The next year, Parks begins printing the first newspaper in the Southern colonies, the *Maryland Gazette*.

1728

Daniel Dulany, the leader of the anti-proprietary party, publishes *The Right of the Inhabitants of Maryland to the Benefit of the English Laws*. The pamphlet is one of the earliest American documents to explore the theory of natural rights.

1732

Charles Calvert, Lord Baltimore, becomes the first proprietor to visit Maryland in almost fifty years. While Lord Baltimore and his lady energize an opulent social scene in Maryland, he also brings about a compromise with Daniel Dulany by granting Dulany several posts, including attorney general. The end result of Baltimore's visit is, as much as possible, a return to the absolute authority vested in earlier proprietors. The country party is weakened significantly.

1738

The election of 1738 brings about a shift in Maryland politics. Charles Carroll, a wealthy Protestant landowner, intellectual, merchant, and iron producer is one of several prominent new faces. The Assembly once again begins to grumble about the authoritarian leanings of the proprietorship. Governor Ogle dismisses the legislature, and Calvert eventually replaces him with Thomas Bladen.

1754

Fighting breaks out in the Ohio River Valley, and within a matter of years, England and France are waging war on a global scale. Maryland only barely joins with the other British colonies in what begins as an effort to defend the colonies against Native American and French aggression and turns into a battle for North America.

1756

The Assembly passes a piece of legislation known as the 40,000 Pound Act of 1756. The Act taxes all landholdings, including those of the proprietor, and taxes Catholic landholders at twice the usual rate. Representatives discover that the British Crown and the proprietor can be brought into conflict with one another, particularly during wartime. Painted into a corner, the proprietor allows the act to stand.

1765

Maryland's reaction to the Stamp Act lacks the fever pitch present in other colonies, most notably Pennsylvania and Massachusetts. But a small Sons of Liberty movement does appear, and Marylanders rejoice when the Act is repealed.

1770

About 220,000 people live in Maryland. The population has not only grown in terms of sheer numbers, but in diversity as well. English, Irish, Scots, and many recent German immigrants have swelled its ranks.

1776

Following the lead of Britain's other North American colonies, Maryland breaks away from the British Empire, and declares its independence. The Revolution in Maryland at first takes on a decidedly conservative tint, as the assembly institutes property requirements for both voting and office holding when it issues the Form of Government. The Assembly also passes a Declaration of Rights.

Matthew Jennings

Massachusetts

Prior to the Arrival of Europeans

In the areas that will become Plymouth and Massachusetts Bay Colony, the main native groups are the Wampanoag (including Pokanokets and Pocasset), the Narragansett, the Mohegan, the Nipmuc, the Massachusett, and the Nauset. As fur trading with Europeans increases, the Pequot and other tribes from closer to the Connecticut River Valley will move east to take part as well. Most of the native men and women who live in Massachusetts speak languages belonging to the Eastern Algonquian family.

Southern New England's native peoples live in villages led by sachems, mostly male but some female, though a sachem's control over his or her people is hardly ever absolute. (In the early seventeenth century, Massasoit will become grand sachem of all the Wampanoag villages.) Villages are semipermanent settlements situated along rivers and bays that allow for a varied diet of agricultural products, fish and shellfish, and wild game. Generally speaking, hunting, fishing, warfare, and politics are male activities, while agriculture and domestic work are performed by women.

Though beliefs vary widely from community to community, most native New Englanders have a concept akin to the Massachusetts's *Manitou*. Manitou refers to both spiritual beings and the spirit world in general. Religious practitioners (*pawauog*—"powwows" to the early English) seek manitou through fasting, dreams, and visions, and their access to spiritual power makes them valuable to their communities as healers, prophets, and advisors to sachems.

1497

John Cabot, under the flag of England, explores the northeast coast of North America in a futile attempt to find the Northwest Passage to the Indies. His voyage does not immediately bear fruit in terms of settlement or establishing trade, but it does form the legal basis for later English claims to North America.

1524

Giovanni da Verrazano, sailing for France, probes the American coast from the Carolinas to Maine.

1525

Esteban Gómez, a Portuguese captain commissioned by Spain, makes landfall near Massachusetts Bay. In the summer, he maps the bay as far as Cape Cod.

1602

Bartholomew Gosnold, an English sailor, lands and tries to establish a small colony on one of the Elizabeth Islands. He names Cape Cod for the vast amount of fish he sees in the bay. Running short on food, Gosnold and his settlers return to England with some cedar logs and sassafras.

Shortly after Gosnold's colony fails, Samuel de Champlain spends two years charting the New England coast in the hope of establishing a French colony. He gives up this effort and returns to France in 1607.

1606

Inspired by James Rosier's *True Relation of the Most Prosperous Voyage*—a rosy account of Captain George Weymouth's adventures in Maine—Sir Ferdinando Gorges, Sir John Popham, and Richard Hakluyt convince King James I to charter the Virginia Company, whose branches, the Plymouth Company and the London Company, will be responsible for establishing Massachusetts and Virginia respectively. The small colony in Maine fails when the English arrive too late in the season to plant.

1614

John Smith explores, and names, New England. He publishes his findings, and his influence leads to further English interest in the area.

1615–1620

The total native population of southern New England, which had been as high as 75,000, is cut in half by a series of epidemics. In some localities, the devastation is even greater—from 75 to 90 percent in the most extreme cases. This stunning decline dramatically alters native community life and paves

the way for English colonization in the area.

1620

A group of 102 colonists, including many Separatists—known as the Pilgrims—completes a nine-week voyage when the *Mayflower* lands off Cape Cod. The Pilgrims, led by William Bradford, had intended to settle at the mouth of the Hudson River, which was within the territory claimed by the Virginia Company, but the trip around Cape Cod seems too risky, and they stop briefly at Provincetown before choosing Plymouth.

The move to America is only the most recent for the Pilgrims. Facing persecution for their Separatist views, they had left Scrooby in Nottinghamshire for Amsterdam in the Netherlands, and then had moved from Amsterdam to Leyden. Though members of the group were prosperous and free from fines and prison in Leyden, some parents began to worry about their children growing up Dutch. They looked to American colonization as a better alternative.

1620s

Throughout the 1620s, Puritans become increasingly infatuated with the idea of establishing an American colony. They infuse more capital into the New England Company for a plantation in Massachusetts-Bay—the Massachusetts Bay Company—and assume leadership positions on its governing board. By 1629, the company has a royal charter allowing it to govern, a land grant, and a pool of disaffected English people ready to move to New England. The charter, for some unknown reason, does not require the company to hold meetings in London.

1630

Under the able leadership of John Winthrop, a mass migration of Puritans to Massachusetts Bay begins. The period between 1620 and 1640 sees approximately 60,000 English men and women leave England. Around 20,000 of these emigrants end up in the Massachusetts Bay area, earning the mass exodus the title of the “Great Migration.”

By 1630, Puritans practicing their faith in certain parts of England have become targets for governmental persecution. In Suffolk, home of John Winthrop, harassment is only one of a number of problems. The area is also wracked by unemployment, high land prices, and general sinfulness, according to the Puritans.

On board the *Arabella*, Winthrop delivers his famous “Modell of Christian Charity” sermon. For Winthrop and like-minded Puritans, Massachusetts Bay is a chance to reform and purify church and society, both of which have been badly corrupted in England. Winthrop also speaks of two covenants. The first, between God and the Puritans, sets the Puritans apart as God's chosen people. The second covenant, among the Puritans themselves, is to set up a godly and orderly community. Once the godly community—Winthrop termed it a “city upon a hill”—is set up, it is to serve as a model for England.

1635

The General Court authorizes town government, and several of the Massachusetts towns, already holding scheduled town meetings, use this authorization to regularize their governments. Most towns are governed by a small group of selectmen chosen from a larger pool of freemen. Towns establish their own churches, hire and fire their own ministers, and deal with petty criminals. Most power in Massachusetts is held locally, though the General Court can step in to resolve disputes and handle colony-wide issues. Though Puritans are the dominant force in early Massachusetts, non-Puritans are involved from the start. Also, though Puritan laypeople dominate town meetings and the General Court, Puritan ministers are strictly forbidden from serving in the Court or holding high political office.

Thomas Hooker, pastor of the Cambridge church, leads his congregation to settle the town of Hartford. Puritans found other towns in Connecticut, New Haven (then a separate colony), Rhode Island, and New Hampshire.

The General Court establishes a fishing commission, and offers tax exemptions on boats and fishing equipment for seven years.

1636

Harvard College is founded. No other English colony possesses a comparable institution at such an early stage of its development. Though training for the ministry is the main reason for Harvard's existence, students receive a rigorous education in logic, language, and the other liberal arts.

Also in 1636, Thomas Pynchon founds the town of Agawam (present-day Springfield) on the Connecticut River. Pynchon dominates the early Massachusetts beaver pelt trade.

1637

Massachusetts Bay Colony and Connecticut declare war on the Pequot, who have moved into the Connecticut River Valley. In the main action of the war, Puritans under Captain John Underhill—along with their Narragansett allies—burn a palisaded village on the Mystic River, killing hundreds of Pequot noncombatants. Pequot warriors are dispersed to live among other tribes, killed, or sold into slavery in the West Indies, while the English try to erase any reminders of the Pequot from the landscape.

1640

The Bay Psalm Book is published for the first time. Religious music in America has lagged far behind that produced in Europe in terms of sophistication. Poor singing is a matter of some concern to colonial Massachusetts congregations. One town, Wilbraham, goes so far as to set up a committee to look into “the broken state of this town with regard to singing.”

1641

Nathaniel Ward releases "The Body of Liberties," a bill of rights that evolves into the first legal code for English people in Massachusetts.

1643

Massachusetts bands together with Plymouth, Connecticut, and New Haven to form the United Colonies of New England. Heretical Rhode Island is not invited to join the union, which forms after the Pequot War for purposes of defense.

1646

John Eliot begins missionary activity among Massachusetts's native population. His "praying town," Natick, mirrors English towns, and brings native people together to work, study, and live. Eliot preaches in the Massachusett language, and also translates the Bible into a written form of Massachusett he develops. Thomas Mayhew and Richard Bourne work as missionaries on Martha's Vineyard and Cape Cod, respectively.

1647

The General Court passes a law requiring all towns of fifty or more households to provide a teacher to instruct children in reading and writing. The Puritans place great emphasis on education, and not for solely religious reasons. They view it as a means to improve society. Some students pay for their education, and others attend on public funds. Massachusetts boasts a 90 percent male (and 50 percent female) literacy rate. By 1700, Boston will be the second largest publishing center in the British Empire, behind only London.

1650

Anne Bradstreet's *The Tenth Muse Lately Sprung Up in America* is published in London. Using humor, warmth, and passion to great effect, Bradstreet's poetry, the first published work of an Englishwoman in America, shows an often overlooked side of Puritanism.

1660s

King Charles II, recently restored, attempts to regulate colonial trade with a series of Navigation Acts. Before goods can be shipped to the Americas, they have to pass through England and be taxed. Also, all goods moving around the empire have to be shipped by English or colonial vessels. Boston enforces these acts loosely; as a result, it becomes one of the most active port cities in the Americas.

1662

Some Massachusetts churches recognize a partial form of church membership in the Half-way Covenant. In the earliest years of the colony, a conversion experience was required to have one's children baptized. The Half-way Covenant allows persons who have not experienced conversion to have their children baptized, though they themselves are not allowed to take communion. Puritan leaders, and some later scholars, use the covenant to prove that Massachusetts Puritans are backsliding from their lofty goals. Solomon Stoddard, minister of Northampton and grandfather of Jonathan Edwards, allows "halfway" church members to take communion.

1675–1676

In June 1675, Wampanoags led by Metacom—known to the English colonists as King Philip—begin to harass settlements in western Massachusetts in response to colonial expansion and increased missionary activity. Large-scale warfare erupts between Plymouth and the Wampanoag, and soon people all over New England are forced to choose sides. Wampanoags, Narragansetts, and many Nipmucs fight the English, other Nipmucs, and a sizable contingent of Mohawks.

King Philip's War sees the destruction of some dozen English towns in New England. Other English settlements are partially burned or dispersed when their inhabitants flee toward the relative safety of Boston and other towns to the east. Mary Rowlandson, captured in the attack on Lancaster, leaves behind a lengthy account of her captivity; it will be published in 1682 as *The Sovereignty and Goodness of God* and will serve as the basis for future captivity narratives.

The effects of Metacom's War, as awful as they are for English people living in Massachusetts, are much worse for the region's native peoples. In the Great Swamp Fight, English soldiers kill hundreds of Narragansetts. Metacom's death in August 1676 weakens native resolve to keep up the fight. Native Americans will never really recover to the extent that they can challenge English authority in the area. Approximately 1,000 colonists perish in the fighting, and of a native population of around 20,000, three thousand lose their lives. Even Native Americans who fight alongside the English or remain neutral are subject to mistrust at best and outright violence at worst.

1683–1684

King Charles II begins the procedure to revoke the 1629 charter of Massachusetts Bay, citing numerous violations of English law. His death delays the process, but, by 1686, royal government is established in Massachusetts.

1686

The Dominion of New England takes shape. New Hampshire, Maine, Massachusetts Bay, and Plymouth become one administrative unit as part of an English effort to better control the empire. New York, East and West New Jersey, Connecticut, and Rhode Island become part of the Dominion shortly thereafter. Sir Edmund Andros, a professional soldier, is tapped by King James II to rule the Dominion. Andros, in conjunction with a royally appointed

council, works diligently to bring New England under the rule of English law. Some provisions of this law would return land to the Crown and force religious toleration; both measures are unacceptable to Massachusetts Puritan leadership.

1689

Spurred on by resentment of the Andros government and news of England's Glorious Revolution that has placed William and Mary on the throne, rioters tear through Boston. Accompanied by armed militiamen, the rebels imprison many government officials, including Andros, who is shipped back to London but never prosecuted.

1690–1691

In spite of the fact that many Puritans prefer a return to the old charter government, King William III—and the Committee on Trade and Plantations—drafts a new charter that features a royal governor who can veto General Court decisions, sanctions religious toleration, and gives the governor broad powers when it came to matters of defense. The charter also gives Massachusetts jurisdiction over Maine and Plymouth, but not New Hampshire.

1691–1692

Massachusetts is engulfed by a series of witch hunts. The controversy originates in Salem village, where Reverend Samuel Parris's young daughter and niece blame their hysterical and strange behavior on a West Indian servant, Tituba. Soon afterward, more accusers—mainly young unmarried women—name more suspects, mostly older married women and widows. By the end of the controversy, scores of accused witches have been tried, and almost two dozen convicted and executed.

1702

Cotton Mather publishes *Magnalia Christi Americana*, a work that examines New England's history from a Puritan point of view. During his intellectual career, Mather publishes over 400 works on a variety of subjects, including religion, science, and politics.

1703

As part of the larger conflict known in the colonies as Queen Anne's War (the War of the Spanish Succession in Europe) French and Abenaki forces attack towns on the eastern frontier of Massachusetts, from Casco Bay to York.

1704

French and native forces fall on the town of Deerfield, killing or capturing half of its inhabitants. Most prominent among those captured is John Williams, the town's pastor. Upon Williams's release from Canada, he returns to Massachusetts and publishes *The Redeemed Captive Returning to Zion*, which, like other captivity narratives, tells the story of captivity at the same time as it reinforces the Puritan sense of mission. Much to Williams' chagrin, his daughter Eunice is never redeemed. She converts to Catholicism, marries Arosen, a Mohawk man, and lives with him in Kahnawake, an Iroquois mission community in southern Canada.

As Queen Anne's War wears on, settlements in western Massachusetts remain exposed to frequent attacks, and other colonies do little to alleviate the situation. Massachusetts soldiers participate in the capture of Port Royal, Acadia (Nova Scotia), in 1710. The Treaty of Utrecht, signed in 1713, brings the conflict to an end and secures Acadia as a British possession.

Publication of the *Boston News-Letter*, colonial America's first successful newspaper, begins. Other newspapers in colonial Boston will include the *Boston Gazette* and the *New England Courant*. Among Massachusetts towns, Salem, Newburyport, Worcester, and Cambridge all will have newspapers before the War for Independence begins.

1718

Around 1,000 Scots-Irish migrate from Northern Ireland to Boston. Some settle in Worcester, where locals burn their church to the ground. Most Scots-Irish settle outside of Boston, in Sutton, Rutland, Ware, Dracut, and Andover, or move northward into Maine, which is still part of Massachusetts.

1724–1725

Governor Dummer's War rages between Abenakis, allied with the French under the Marquis de Vaudreuil and the Jesuit Sebastien R  le, and Massachusetts forces. In 1725, following the death of Captain John Lovewell and many of his men at Pigwacket, hostilities cease.

1726

Nathaniel Ames, a medical practitioner and tavern owner, publishes an almanac that sells approximately 60,000 copies. Ames's almanac includes charts on astronomy and weather forecasts, as well as literary excerpts and witty sayings.

1732

Massachusetts Anglicans attempt to disestablish the Congregational (or Puritan) Church. Although the attempt fails, the fact that it is made at all indicates Puritanism's grip is weakening over colonial society in New England.

1733

Parliament passes the Molasses Act, which has little effect on Massachusetts's burgeoning merchant class. Designed to protect West Indian sugar planters and distillers from competition with non-English sources, the act places taxes on rum and molasses in an effort to enforce mercantilism. The act is enforced only on a limited basis, and foreign products continue to pass through Massachusetts ports. Massachusetts sea captains devise a number of ways to avoid paying customs duties on goods shipped around the Atlantic.

1734–1735

Jonathan Edwards, minister at Northampton, reports on religious revivals in the Connecticut River Valley. These are the first rumblings of what will become known as the Great Awakening—a series of spiritual renewals occurring throughout Great Britain's American colonies.

1740

The famed English preacher George Whitefield arrives in Massachusetts, and revivals increase in number and intensity. Whitefield preaches ten sermons in one week in Boston, and the meetings regularly draw several thousand people. His farewell speech reportedly draws 30,000 listeners. Whitefield emphasizes the senses over the mind in faith. The next year at Enfield, Connecticut, Edwards preaches his masterful "Sinners in the Hands of an Angry God" sermon. Edwards's imagery is terrifyingly realistic. At one point, he asks listeners to imagine that "after millions and millions of ages, your torment would be no nearer to an end, than ever it was; and that you never, never should be delivered!"

Edwards and other revivalists are not universally accepted, however. During the 1740s, Charles Chauncy of Boston's First Church and Edwards engage in a heated pamphlet battle. Chauncy argues against passionate faith, and in favor of reason. Conflicts emerge throughout the colony between New Lights (revivalists) and Old Lights (those skeptical about the revivals).

Samuel Waldo persuades forty German families to settle on his lands in Maine. They found the town of Waldoborough, which struggles to produce crops in a harsh climate. Reinforcements continue to arrive, however, and they help to rebuild the settlement after it is destroyed by natives in 1746.

1741

During the War of Jenkins' Ear—named in honor of an English sea captain's removed ear—Massachusetts, complying with an imperial quota, sends 500 soldiers to aid in the British attack on Cartagena in Colombia. The attack fails miserably, and only fifty of the Massachusetts men return alive.

1745

During King George's War, known in Europe as the War of the Austrian Succession, Massachusetts Governor William Shirley outfits an expedition to take the French fortress at Louisbourg, a massive outpost guarding the mouth of the St. Lawrence River. Led by William Pepperrell, a colonial, and Peter Warren, a British commodore, the attack forces a French surrender. The capture of Louisbourg is a matter of great pride for Pepperrell and all of colonial Massachusetts. When, in negotiations at Aix-la-Chapelle in 1748, British diplomats agree to return the fortress to the French, Massachusetts takes the action as a slap in the face.

1754

In a conference among colonial leaders regarding Iroquois relations, Benjamin Franklin proposes the Albany Plan of Union. Massachusetts has eagerly sent delegates to the conference, including Thomas Hutchinson, who iterates the need for some sort of union. The General Court votes down the Albany plan as a violation of the rights of individual colonies.

1756

The French and Indian War—the American theater of the global Seven Years' War—comes to Massachusetts as Governor Shirley orders 2,000 militiamen to root out French Acadian resistance in Nova Scotia. The Acadians are forced to disperse throughout British America.

Shirley also enlists 5,000 soldiers for attacks on Crown Point and Fort Niagara. After Braddock's death, William Shirley becomes commander of all the British forces in North America. Neither attack succeeds, in part, because of inclement weather. Shirley is replaced in his military duties by the Earl of Loudoun and in his civil duties by Thomas Pownall.

In 1758, as William Pitt, the Elder, guides a renewed war effort from London, nearly 10,000 Massachusetts troops are serving in British units and colonial militias. The colony earns special praise from the royal governor as the colonial leader in the fight against the French in Canada. During and immediately after the war, Anglo-Americans in Massachusetts experience a surge in both self-assurance and British patriotism.

1763

The British Empire confronts a number of pressing issues in the aftermath of the Seven Years' War. Pitt's wartime spending has put the empire in serious debt. Great Britain now faces the task of administering and defending all of its newly acquired territories and reorganizing the old ones. Finally, a serious postwar depression has hurt trade around the Atlantic world. In response to these problems, Great Britain, now under the leadership of Prime Minister George Grenville, begins to enforce the Navigation Acts more stringently and explore alternative methods for raising money.

Boston also suffers from a postwar depression. Almost a third of Boston's adult males hold no property, and unemployment is high. To make matters worse, Philadelphia and New York have grown continuously since the 1740s, weakening Boston's commercial position.

1764

Parliament passes the Sugar Act of 1764. Massachusetts merchants benefit from many of its clauses that reduce duties on trade goods, most notably molasses, but they sense that customs officials will be more diligent in the collection of the reduced duties and that Parliament intends to raise revenue from the process. Both of these suspicions draw their ire. Merchants are not the only ones protesting the acts, however. Political leaders and lawyers, such as Samuel Adams and James Otis, Jr., begin to criticize the Sugar Act for undermining the rights of the British Empire's American citizens. Otis pens *The Rights of the British Colonies Asserted and Proved* to convince Parliament to repeal the tax. Tellingly, he does so as a British citizen: "See here the grandeur of the British constitution! See here the wisdom of our ancestors."

William Billings, one of colonial America's few professional musicians, opens his music shop in Boston. In 1770, Billings publishes the *New England Psalm Singer*. His most famous composition is "Chester"—a song popular during the War for Independence.

1765

Parliament passes the Stamp Act, which places duties on such legal documents as wills and deeds. Newspapers, pamphlets, broadsides, and almanacs also require stamps indicating that the tax had been paid. While the Sugar Act has affected a relatively narrow segment of Massachusetts society, the echoes from the Stamp Act reverberate through a wide range of social classes, occupations, and regions. In response, the Massachusetts House of Representatives sends a circular letter to the other colonial legislatures, calling a Stamp Act Congress to convene in New York.

Before the Stamp Act Congress meets in New York, events on the streets of Boston and other colonial cities overshadow any unified legislative response. A group of shopkeepers and artisans, including one prominent newspaper printer, calling themselves the Loyal Nine, meet to prevent the Stamp Act from taking effect. Along with Ebenezer Mackintosh, a shoemaker and gang leader, the group sets its sights on Andrew Oliver, whom they assume will be the stamp collector. A mob hangs Oliver in effigy, destroys his alleged stamp office, and then attacks his house. The crowd also attacks Thomas Hutchinson's house and empties it of papers and valuables, an action that a town meeting the next day roundly condemns as excessive. At the same time, Boston's merchants agree not to import British goods until the Stamp Act is repealed.

1766

Upon news of the Stamp Act's repeal, enthusiastic celebrations break out in Boston. Lost in the celebration is the passage of the 1766 Declaratory Act, which simply declares that Parliament retains power to make binding decisions regarding the colonies.

The Quartering Act of 1765 also feeds into the growing controversy between Britain and its American colonies. Though most of the burden falls on New York, Boston is also required to shelter British troops. Samuel Adams, who opposes the specific act, still advocates the quartering of troops based on previous custom.

1767

Britain tries to enforce the Navigation Acts ever more strictly by creating a new vice-admiralty court at Halifax, Nova Scotia, to try American smugglers away from Boston. Parliament also creates an American Board of Customs Commissioners to oversee the Navigation Acts enforcement.

Also in 1767, under the leadership of Charles Townshend, Chancellor of the Exchequer, Parliament levies taxes known as the Townshend Duties on the importation of tea, glass, paper, and paint. The Massachusetts Circular Letter goes out to other colonies, which generally refuse to accept the new taxes. Boston merchants again agree to nonimportation of British goods, and a series of boycotts and nonconsumption agreements ensues.

1768

Customs officers seize John Hancock's sloop *Liberty* for suspected violations, but the price of their actions proves great when an angry crowd roughs up one of the collectors and burns a boat belonging to his father. Following the incident, most of the royal officials relocate to Castle William, in the harbor, under the protection of the warship *Romney*.

1770

The new prime minister, Lord North, repeals the Townshend Duties, except for the duty on tea, which remains as a symbol of Parliament's authority over the colonies.

In March, a group of British guards, provoked by a mob of Bostonians taunting them and throwing snow, ice, and clubs, opens fire on the crowd, killing five and wounding others. Paul Revere's imaginative recreation of the scene provokes widespread anger over the incident, which will become known as the Boston Massacre.

1772

In response to the increasing confrontation between British troops and the people of Massachusetts, Samuel Adams convenes a committee of correspondence to disseminate information, in this case Adams's "Boston Pamphlet," about the situation. Other similar committees meet throughout the colonies, and, on a grassroots level, opposition to British policies begins to take shape. In opposition to Adams, now-Governor Thomas Hutchinson essentially argues that either the colonies should accept Parliament's authority or become independent—Hutchinson, and many others, do not consider independence a real option, of course. Hutchinson's argument pushes many colonial moderates toward independence.

1773

In opposition to the tax on tea, a group of Boston patriots gathers to prevent the importation of a shipload of dutied tea. At first, they petition Hutchinson to send the ship back to England, but he refuses. The group picks up support from the entire spectrum of colonial society, and, crudely disguised as

Mohawks, they begin to empty the tea into Boston Harbor. The Boston Tea Party results in the destruction of English tea worth more than 10,000 pounds.

1774

Infuriated by the Boston Tea Party, King George III and Parliament pass a number of Coercive Acts, which the more rebellious among the colonists label the Intolerable Acts. Among these is the Boston Port Bill, which closes the port of Boston until such time as the Tea Party participants can be brought to justice, the East India Company repaid for its loss, and the Crown assured of the colony's obedience in the future. Other Massachusetts ports and American cities aid Boston through the crisis, and Boston's plight becomes lightning rod for protests around the American colonies.

The Massachusetts House of Representatives meets secretly to call a Continental Congress. Shortly thereafter, Governor Gage—Hutchinson has moved to England—dissolves the body, further inflaming popular opinion against British rule. Gage also bans town meetings. The Continental Congress meets and adjourns, resolving to oppose British policies as a group of colonies.

Daniel Leonard, writing as "Massachusettensis," advocates a loyalist course of action, arguing that Parliament is the supreme authority in the British Empire. Interestingly, Leonard also prophesies that a future King George might rule his empire from a prosperous, secure British America. John Adams, responding as "Novanglus," advocates total independence from Great Britain. Most Massachusetts colonists are in between these two camps, though patriots outnumber loyalists.

1775

The Massachusetts Provincial Congress meets and places military preparedness at the top of its agenda. It proposes an all-volunteer army and later appoints officers.

In April, General Gage, on orders from Lord Dartmouth, sends a force out of Boston to capture patriot ammunition stores at Concord. A skirmish breaks out at Lexington, and by the time the British reach Concord, hundreds of militiamen oppose them, word having been sent by Paul Revere and others. As the British retreat to Boston, they fight a series of battles against the militia.

Fighting resumes in June at the Battle of Bunker Hill, which actually takes place on Breed's Hill. Massachusetts loses the battle but inflicts a large number of casualties.

1776–1783

Though Massachusetts is the leader of the continental movement toward independence, its own government continues to operate along the lines of the 1691 charter, although, obviously, it excludes the authority of the Crown and Parliament.

In 1778, the General Court offers a new constitution to the people, which many towns reject. A provisional government continues to administer the war effort and the state's finances. The Constitution of 1780 proves longer-lasting, and it is still in force today.

Matthew Jennings

New Hampshire

Prior to the Arrival of Europeans

Perhaps as many as 3,000 Algonquian-speaking native people live in what will become the English colony of New Hampshire. Several distinct native cultures exist in the region, the most widespread being that of the Pennacook.

Like other Algonquian-speaking peoples in New England, the Pennacook split their time between semipermanent agricultural settlements and smaller, more mobile, hunting and fishing camps. Women do all of the farming, while men are responsible for hunting, warfare, and other pursuits.

Before the arrival of the English, a series of catastrophes befalls the Pennacook. In the closing decades of the sixteenth century, some Mohawk communities relocate to the east, bringing them into competition and conflict with the Pennacook.

1603

A group of merchant adventurers from Bristol, England, explores the Piscataqua River area, hoping to pay for the voyage and perhaps turn a profit by collecting sassafras. The mission fails to find sufficient sassafras, though it does identify the Piscataqua inlet as a promising site for settlement.

1615–1620

An epidemic decimates the native peoples of New England, altering native life and paving the way for English colonization in the area.

In 1620, Sir Ferdinando Gorges is instrumental in creating the Council for New England, of which he becomes the first president. The Council for New

England has the authority to grant land, control trade, and administer colonies north of Virginia. David Thomson, Gorges, and John Mason—all of whom would figure in New Hampshire's early history—will be issued patents by the council. Gorges's time will be occupied with fighting against Spain and France, but John Mason will continue to devote money and energy to exploring and settling New Hampshire.

1629

The Maine patent is split into two portions; the northern portion remains under the control of Gorges, while Mason comes into possession of the lower half, which he names New Hampshire, after the county in England that is home to his family's estate.

Also in 1629, Gorges and Mason receive a charter for the Laconia Company, which is intended to divert beaver pelts from the Dutch and French operating in the area. The company goes bankrupt in 1634.

1635

John Mason dies suddenly. English interest in New England focuses on Massachusetts Bay, and, following Mason's death, the colonization of New Hampshire abruptly halts. Only a handful of colonists are living in the Piscataqua watershed, and most of them move to Massachusetts Bay or Maine.

1637

For a short time, New Hampshire is led by Captain John Underhill, a powerful and unstable Puritan, who has run afoul of the Massachusetts Bay Colony leadership due to his support of Anne Hutchinson during the Antinomian Controversy. Underhill eventually returns to Massachusetts.

1638

Thomas Wheelwright, a Puritan minister and relative of Anne Hutchinson, sets up a dissenting community at Squamscott (now Exeter). Puritan officials disapprove of Wheelwright's settlement, but they encourage a group of Puritans to found a town at Winnacunnet (present-day Hampton).

1640

A sizeable English population lives between the northern border of the Bay Colony and Piscataqua. More than half of these recent immigrants have moved from Massachusetts Bay in search of increased economic opportunity and less Puritan social control. In fact, John Winthrop, governor of Massachusetts Bay, writes that Piscataqua is a hotbed of whoring, drunkenness, and conflict. Piscataqua settlers often quarrel with Massachusetts Bay over land claims, many of which overlap.

Most of the English settlement of New Hampshire occurs along the lines laid out by the Massachusetts towns farther to the south. That is to say, the town is the central unit of community organization, providing behavioral controls and protection against external enemies. The region quite naturally falls under the economic and political influence of the larger and more prosperous Massachusetts Bay Colony.

1641

The General Court of Massachusetts Bay accepts responsibility for the government of Hampton and the newly created Dover (combining two earlier settlements). The deal that brings Dover under Massachusetts' jurisdiction allows Anglicans to participate in town government. Soon after, Exeter became a Massachusetts town as well.

As for Thomas Wheelwright's community at Squamscott (Exeter), both he and his opponents apply to the Massachusetts General Court to become official towns. The Court rules in favor of Wheelwright's opposition, and he and his few remaining followers move farther north into present-day Maine.

1664

A royal commission lands in the Piscataqua region as part of an effort to determine whether the Massachusetts Bay Colony is governing territories beyond the purview of its charter. The commission breeds some dissension in the four towns of New Hampshire, where many of the residents have strong religious and economic ties to Massachusetts. The move to bring New Hampshire under royal control fails, largely because it is ignored by Parliament and the Crown.

1672

Upon hearing that Massachusetts Bay intends to purchase the titles to both Maine and New Hampshire, King Charles II sends another commission to New Hampshire after urging the owners of the various patents (still descendants of Gorges and Mason) not to sell the land. This action will eventually result in New Hampshire's permanent separation from Massachusetts and its establishment as a royal colony.

1677

An English court rules that since Captain John Mason has never received permission to govern New Hampshire, his grandson Joseph can make no such claim. The ruling prevents Mason from establishing a proprietary colony in the Piscataqua region, and it also determines that the ownership of New Hampshire must be debated before Massachusetts courts.

1679

Anthony Ashley Cooper, first Earl of Shaftesbury, and the Lords of Trade punish Massachusetts's charter violations by removing New Hampshire from

Massachusetts's control and establishing it as a separate royal colony with its own government. The leaders of New Hampshire take advantage of a loophole to appoint many of the men who have ruled New Hampshire while it was under the influence of Massachusetts.

1680

The English population of New Hampshire stands at approximately 2,000. Most of these people are involved in agriculture and animal husbandry, both for use in New Hampshire and for export. New Hampshire, in particular, has become known for its forest products, and a lively trade has developed between Portsmouth and Dover and the West Indies.

1682

Edward Cranfield, the newly appointed royal governor of New Hampshire, arrives. Within a year and half of his appointment, he has removed every single official who has governed before his arrival. He replaces these former officials with men who try to weaken Puritan influence, gain acceptance for Quakers, and enforce the largely ignored Navigation Acts. As part of this process, Cranfield oversteps his authority to settle disputes over land. His far-reaching attempt to force New Hampshire to accept royal authority succeeds primarily in alienating most of the colony's residents.

1684

Edward Gove leads an abortive armed rebellion against Cranfield's royal government. Gove is convicted of treason and sentenced to die, but he eventually wins a pardon. Cranfield's hold on New Hampshire, always tenuous, has weakened to the point that he moves to Boston and seeks a different appointment. He becomes the customs official for Barbados.

1685

New Hampshire is subsumed into the Dominion of New England as King James II and his colonial officials seek to exert greater control over the colonies. Though the effects on everyday life in New Hampshire are slight—in fact, many unpopular holdovers from the Cranfield administration move to Boston—it is unclear whether New Hampshire is a distinct entity within the Dominion.

1689

In the wake of England's "Glorious Revolution," which removed James II from power and replaced him with King William III and Queen Mary II, Massachusetts deposes Edmund Andros, the Dominion governor. New Hampshire, which has town governments but no overarching political structure, is left in the lurch.

Pennacooks and Abenakis, the former having been recently dispossessed of their homeland, attack Dover. As France and England again go to war, native warriors in the region ally with the French against the English. The English settlers have their own native allies, the Iroquois. The two sides continue to fight sporadically for two decades. New Hampshire becomes a dangerous place to live for both native and non-native people as a series of retaliatory raids plague the region. Colonists refer to the conflicts as King William's (1689–1697) and Queen Anne's (1702–1713) Wars. The wars seriously slow New Hampshire's population growth and hurt the fishing industry, even as they prove a boon to the Piscataqua-area naval stores producers.

1690

Leading citizens of Portsmouth circulate a petition for reannexation by Massachusetts. The Massachusetts governor, council, and General Court accept the petition, and New Hampshire is once again part of Massachusetts.

1691–1692

Massachusetts battles Samuel Allen, an English merchant, in court for control of the four New Hampshire towns. Allen wins and becomes lieutenant governor in addition to proprietor, having purchased the post from Mason's heirs. Allen's tenure is plagued by political infighting. Massachusetts and New Hampshire share a governor at this point, though each maintains its own government at lower levels.

1693

Legislation is enacted that requires all New Hampshire towns to maintain grammar schools. Despite this legal requirement, many towns do not have schools, and teachers' salaries remain well below those of day laborers.

1724–1725

Dummer's War, named for the Massachusetts official who directs it, removes the Abenakis from the area along the eastern boundary of New Hampshire. White settlement increases in the area shortly thereafter. In fact, by the 1730s, very few native people remain in New Hampshire.

1730s

Portsmouth builds an Anglican church. Although Congregationalism remains the dominant faith in colonial New Hampshire, its influence weakens throughout the eighteenth century as increasing immigration sees the founding of Anglican, Presbyterian, and other churches.

1740

The Privy Council appoints a commission to establish New Hampshire's southern boundary. The commission accomplishes the task, and actually enlarges

the colony by a few hundred square miles. The Privy Council also appoints Benning Wentworth independent governor of the newly expanded colony.

Also in 1740, George Whitefield visits New Hampshire. The well-known revivalist receives an ambivalent reception at first, but when he returns in 1744, he remarks upon the newly revitalized congregations. As in other colonies, the division between Old Light and New Light congregations and pastors causes some consternation. The New Light movement (pro-revivalist) eventually loses steam.

1741

Benning Wentworth becomes governor of New Hampshire. His successful tenure lasts until 1767, and he leads New Hampshire through a series of midcentury wars.

1745

New Hampshire contributes men and supplies to the English attack on the fort at Louisbourg, the most remarkable colonial success in what the colonists refer to as King George's War. The growing military might of the New England colonies troubles the French and their native allies.

1754–1763

New Hampshire provides hundreds of soldiers per year to the British war effort during the French and Indian War. Robert Rogers's famous "rangers" serve as scouts for the British and also disperse the Catholic Native American community at St. Francis, which had served as the jumping-off point for a number of invasions. The end of the war, with the collapse of French Canada and the signing of the Treaty of Paris in 1763, secures the northern part of New Hampshire as an area safe for English settlement.

1756

Daniel Fowle, a printer operating out of Boston, moves to Portsmouth and founds the *New Hampshire Gazette*. Prior to Fowle's paper, most New Hampshire news and advertisements ran in Massachusetts newspapers.

1765

In response to the Stamp Act handed down by Parliament, a local Sons of Liberty movement develops in Portsmouth. The governor, Benning Wentworth, refuses to enforce the act, but is accused by protestors of not acting passionately enough in defense of New Hampshire's rights.

1767

John Wentworth, the newly appointed governor of New Hampshire and nephew of the popular Benning, arrives. Wentworth immediately comes under fire when he decides not to oppose the Townshend Duties, a series of taxes meant to replace the Stamp Act. Throughout New Hampshire, merchants demonstrate their concerns by adopting nonimportation resolutions.

1768

Massachusetts circulates a letter asking that all of the British colonies stand together against the Townshend Act. Though most of the Assembly supports the cause, Wentworth and his associates prevent the measure from going forward, and the normally cordial political atmosphere grows more tense and rancorous.

1773

New Hampshirites join Massachusetts in protesting the Tea Act, not by dumping tea in the harbor, but by entering into nonconsumption pacts.

1774

Wentworth's authority continues to deteriorate. On December 14, a crowd of 400 men attacks Fort William and Mary, which they think will be reinforced by British troops. Wentworth calls out the militia, which does not respond.

1775

Reflecting dramatic population growth that occurred all along the eastern seaboard in the second half of the eighteenth century, particularly between 1765 and 1775, the population of New Hampshire stands at approximately 75,000.

In April, following the outbreak of hostilities at Lexington and Concord, hundreds of New Hampshire militiamen flood into Massachusetts to assist colonists there. Wentworth responds by delaying the sitting of the legislature, which infuriates the patriot movement even more.

The old Assembly begins to refer to itself as the "Provincial Congress," and in 1776 becomes the House of Representatives. Most of the power to govern in New Hampshire remains firmly entrenched at the town level.

1776

By July, when the Continental Congress meets at Philadelphia to declare independence, New Hampshire is already functioning as a self-governing, independent entity.

During the War for Independence, no fighting takes place within the borders of New Hampshire. The population of the state continues to grow rapidly, reaching 95,000 by the mid-1780s.

Matthew Jennings

New Jersey

Prior to the Arrival of Europeans

The most populous group of Native Americans in what will become New Jersey is the Lenni Lenape (Delaware). The Lenni Lenape, who speak variants of the Algonquian language, live in riverside villages in New Jersey, Delaware, Pennsylvania, and New York. Approximately 3,000 Lenni Lenapes live in New Jersey before the arrival of large numbers of Europeans.

The village is the basic unit of Lenni Lenape political life, and the people engage in a variety of subsistence activities, including fishing, hunting, and growing corn, beans, and squash. The Five Nations of the Iroquois, living north and west of the Lenni Lenape, are the dominant native power in the region and will continue in that capacity, expanding their role as colonization takes hold.

1497

John Cabot skirts the coast of New Jersey during his voyage of discovery. This voyage forms the shaky legal basis for later English claims to the region.

1609

During his futile search for a northwest passage, Henry Hudson, an English navigator working for the Dutch, sails up the river now bearing his name. Hudson's voyage prompts increased Dutch interest in the area.

1623

The States-General formally establishes the colony of New Netherland. It commissions small numbers of settlers to move into Fort Orange (Albany), Fort Nassau (near present-day Philadelphia), and the Fort of Good Hope (on the Connecticut River).

1626

Dutch colonization begins on the island of Manhattan. Most early Dutch ventures in the region are exclusively fur-trading outposts.

1629

Lessening its financial commitment to American colonization, the Dutch West India Company establishes a handful of patroonships in New York, New Jersey, and Delaware. The landowner, or patroon, holds feudal rights over a swath of land extending out indefinitely from a riverbank. Under the patroonship system, Michael Pauw becomes the first European to own land in New Jersey, calling his estate Pavonia.

1638

Willem Kieft becomes director-general of the colony of New Netherland. In an effort to revitalize the colony, he badly damages Native American-Dutch relations, first by threatening to tax Native Americans—payable in furs—and then by inciting a race war, which devastates both the Dutch and native populations. Kieft's War, which lasts from 1643 to 1645, eliminates nearly all Dutch settlements on the west side of the Hudson River.

1640

A small Swedish community is established on the New Jersey side of the Delaware River. By the 1650s, relatively few of the Swedes remain, though their relations with the Dutch are, for the most part, peaceful.

1655

A large Native American force attacks New Amsterdam. Though the assault is driven back, all Dutch settlement on the west side of the Hudson ceases. During the same year, Peter Stuyvesant forces the surrender of the colony of New Sweden.

1656

In a conciliatory move, Stuyvesant forces the purchase of Native American lands and commands that new immigrants to the region settle in villages, not on dispersed individual farms.

1660

Tielman Van Vleeck founds the town of Bergen, the first permanent European settlement in New Jersey. Bergen is laid out as a palisaded village, featuring two perpendicular main streets, with gardens and livestock pasture outside the palisade.

1664

A small English force—the exact number is not known, but far fewer than the 2,000 that Stuyvesant was convinced of—blockades the harbor at New Amsterdam. Stuyvesant surrenders without firing a shot.

Just before this “conquest,” King Charles II of England grants his brother James, the Duke of York, all of the lands between the Connecticut and Delaware Rivers. The charter makes James the proprietor of the colony, with no provision for an elected assembly. James proceeds to grant two of his friends, Lord John Berkeley and Sir George Carteret, the proprietorship of New Jersey, which is named after the isle of Jersey, where Carteret had been born. Richard Nicolls, the governor, believes New Jersey to be the most valuable part of the proprietorship, and urges James not to give it up.

Nicolls grants an association of Baptists, Quakers, and disillusioned Puritans 400,000 acres. The grant results in the founding of Elizabethtown and Piscataway. The years that followed see Middletown, Woodbridge, Newark, and Shrewsbury established in much the same fashion.

1665

Nicolls issues the Duke's Laws. The Duke's Laws allow for town government and broad-based tolerance for all Protestant denominations.

The new proprietors, Carteret and Berkeley, draw up the Concessions and Agreements, guaranteeing a general assembly and freedom of trade and conscience—at least for Protestants. Meanwhile, the Dutch town of Bergen is allowed to keep all of its institutions and local officials, as long as they take an oath of allegiance to England.

1667–1670

A group of Barbadian planters purchases large tracts of land in Bergen County and brings in a substantial number of African slaves.

1673–1674

A Dutch fleet occupies New York and New Jersey, with relatively little impact on the lives of the New Jersey colonists. When residents of some of the towns petition for confirmation of their rights, they are told that they have the same rights as Dutch citizens, including liberty of conscience and the right to own their lands peacefully. A 1674 treaty restores New Jersey to the English.

Also in 1674, John Berkeley sells his proprietorship to two Quakers, Edward Byllynge (Billing) and John Fenwick.

1676

George Carteret agrees to partition the territory, creating the colonies of West Jersey (formerly Berkeley's grant) and East Jersey. His heir governs the East Jersey colony.

The East Jersey assembly enacts a code of criminal law, based on earlier laws and the Duke's Laws of 1665. The code is fairly strict, and is, in fact, based on New England law, though it provides for restitution, as well as corporal punishment and, therefore, is more lenient.

Also in 1676, Byllynge drafts the West Jersey Concessions, which become law in 1677. The Concessions, a fundamentally Quaker document, mark a watershed moment in colonial political development. Nearly all adult males will be able to vote, and the elected assembly will wield a comparatively large amount of power. William Penn encourages Quaker settlement in West Jersey, citing the proprietors' commitment to purchasing Native American lands, trial by jury, and other liberal aspects of the Concessions. Once Pennsylvania is founded, far greater numbers of Quakers migrate to that colony.

Late 1670s

Governor Carteret of East Jersey fights a series of legal battles with Sir Edmund Andros, the governor of New York, over customs collection on ships entering the Delaware River. At one point, Carteret is arrested, tried in New York and instructed not to assume the powers of government. Andros's takeover will end in 1680, and Governor Carteret will return to power until his death in 1682.

1682

Hoping the proprietorship's sale will increase the Carteret family's shrinking fortune, East Jersey goes up on the auction block. William Penn and a group of eleven associates purchase the colony, and, combined with the Lower Counties (Delaware), most of the land between Maryland and New York is administered by Quakers. Robert Barclay, a brilliant Scottish Quaker, becomes governor, but he never sets foot in East Jersey. His appointment leads to increased immigration, not only among Scottish Quakers, but the more numerous Presbyterians and Dissenters as well.

The early 1680s also witnesses dramatic change in the New Jersey proprietorships. William Penn's group, now expanded to twenty-four proprietors, controls East Jersey, while all of West Jersey comes under the control of Daniel Cox, a Cambridge-trained royal physician, who has acquired more than 1 million acres of land in America.

1688

The Dominion of New England expands to encompass New York and the two Jerseys under the leadership of Sir Edmund Andros. The seeds are sown during this period for the establishment of East and West Jersey as royal colonies, but the Glorious Revolution and King William's War (or the War of the League of Augsburg) eventually delay proceedings and restore the status quo, albeit temporarily.

1690s

Both Jerseys experience unrest as colonists fight against the proprietors in a number of venues, including the assemblies and town governments. At the same time, the proprietors are fighting to uphold their monopoly on land sales in the region and establish Perth Amboy's port as a free port; ships are generally required to land at New York City first and pay customs duties. The Crown becomes increasingly interested in the right of government, a dispute that lingers from the colonies' earliest days.

1701

The proprietors propose the terms by which they would surrender East and West Jersey to the Crown. The most notable of these are that the proprietors will give up all rights of government; Perth Amboy, Burlington, and Cohansey will be free ports; and New Jersey will become a single colony with an elective assembly.

1703

Colonial politics begin to be dominated by the "Cornbury ring," named after the governor, Lord Cornbury. Cornbury spends most of his energy placing his friends in high offices and trying to control the legislature. Cornbury's party also tries to disfranchise the Quakers.

1707

John Lovelace, a colonel in the military, arrives to replace Cornbury as governor. Although he tries to reconcile the conflicts between the different levels of government, he dies the next year. Lovelace's lieutenant governor, Richard Ingoldsby, replaces him. Ingoldsby runs afoul of the legislature immediately, and the legislature repeatedly refuses to raise money for various projects, including Queen Anne's War.

1710

Robert Hunter takes office, and ushers in a new period of reconciliation and prosperity for New Jersey. Hunter is able to control the more reactionary elements of the council, and, at the same time, work with the assembly, until he runs into conflict with Daniel Coxe, the speaker of the assembly. One of the running themes of New Jersey's—and many of the colonies'—history during this time period is the increasing power and independence of colonial legislatures.

1720

William Burnet becomes governor. At first, Burnet's tenure is marred by conflicts with the assembly, but later he governs more tactfully.

1723

The Loan Office Act sets up a government-controlled bank that allows colonists to take out money, using their land as collateral.

1738

Lewis Morris is appointed governor of New Jersey. For the first time, New Jersey has its own governor, the post having been combined with that of New York in the past. Morris tries to impose his will on the assembly whenever possible, and often refers to his prerogative as governor and the power of the Crown's authority. The colonial assembly, not to be outdone, frequently withholds money—even during the War of Jenkins' Ear and King George's War—and distributes tax revenues as it sees fit.

1745–1746

The assemblies that meet during these years quarrel openly with Governor Morris, and Morris threatens to veto all legislation unless the assembly passes a support act and a militia act. The house finally does both, but when New England plans an attack on Louisbourg, the French fortress at the mouth of the St. Lawrence, New Jersey's legislature drags its feet, further infuriating the governor.

1747

Governor Jonathan Belcher arrives, promising an end to the conflicts that have racked New Jersey. As a result of land policy, he faces a new round of riots. Belcher works to gain Crown approval of measures that would provide amnesty for rioters. The house refuses to grant money to quell the disturbances.

1751

Governor Belcher dissolves the legislature when it refuses to pay his salary, and a slightly more conservative legislature takes its place. Finally, when New Jersey's debt is high and the treasury empty, the legislature begins to tax in earnest. The effect of Belcher's power is fading, the council is the main upholder of royal authority, and the lower house controls the power of the purse. A similar situation exists in other colonies.

1756–1763

The Seven Years' War, known in America as the French and Indian War, engulfs Great Britain and France in an all-out struggle for North America. Britain requires its colonies to provide men and money to support the war effort. New Jersey's legislature ties its support for the war to another Loan Office Act and generally supports the war in the most grudging manner. New Jersey is the only American colony that does not meet its wartime quotas, making it unpopular with the military and the Crown.

1763

In the aftermath of the war, William Franklin, Benjamin Franklin's son, becomes governor. His administration is particularly affected by the reining in of Britain's American colonies. New Jersey, which has issued more paper money than any other American colony, also finds that practice disallowed.

1765

Parliament passes the Stamp Act, which requires tax stamps to be affixed to legal documents and newspapers, igniting a firestorm of protest in several American colonies. New Jersey lawyers gather at Perth Amboy to propose a moderate course: not to buy the stamps, but to strongly oppose disorderly behavior. New Jersey participates in the Stamp Act Congress minimally and does not enter into any nonimportation agreements.

New Jersey is home to some Sons of Liberty activity, particularly in Woodbridge, Elizabethtown, Piscataway, and Freehold.

1767

The Townshend Acts—taxes on tea, glass, paper, and paint—cause more uproar in the colonies. Without the knowledge of Governor Franklin, New Jersey's assembly petitions the king directly to repeal the tax.

1775–1776

New Jersey's population stands at about 130,000, most of whom are involved in the production of cereal grains. African American slaves constitute less than 10 percent of the population, and Native Americans have all but disappeared from the area.

In New Jersey, Governor Franklin hopes fervently that reconciliation between the Crown and the colonies can be brought about. In New Jersey, as in the other colonies, committees of correspondence meet to voice their approval for a continental congress. Most New Jersey residents do not approve of independence.

Even after the hostilities at Lexington and Concord, New Jersey plots a cautious course. There are no newspapers and no organized resistance to imperial policies, partially because imperial policies rarely have relevance to the lives of New Jersey's largely rural population. Eventually, and reluctantly, New Jersey joins the cause of independence, but the colony also is home to fierce Tory resistance. As late as 1782, bands of patriots and Tories fight each other throughout the state.

New Jersey's 1776 Constitution is essentially a conservative document. It aims to correct royal and parliamentary abuses, not to institute a new state government and disrupt long-established patterns in the colony's society and economy.

Matthew Jennings

New York and New Netherland

Prior to the Arrival of Europeans

The Native Americans living in the region that will become New York are primarily members of either the Algonquian or Iroquoian linguistic groups. The Algonquin (consisting of tribes such as the Mahican and Delaware, among others) reside in the eastern regions of New York, while the western regions are occupied by Iroquois, who had migrated from farther west, beginning perhaps as early as 1300 c.e.

By the early sixteenth century, the Iroquoians living to the west have formed the League of Five Nations (or "League of Peace"), consisting of the Mohawk, Oneida, Onondaga, Cayuga, and Seneca tribes. The League not only maintains peace within the bounds of the confederacy, but it also reinforces its superiority over both the eastern Algonquin and other non-League Iroquois farther to the west and south (such as the Huron and Susquehanna peoples).

1579

Meeting in Utrecht, seven Low Countries provinces in the Netherlands form the United Provinces (and its governing body, the States-General), a mutual defense league against their common enemy Spain. With this more unified arrangement, the Dutch will increase their position relative to other European nation-states and become perhaps the preeminent commercial power in Western Europe, trading not only on their own continent, but with Africa, Asia,

and eventually the Americas as well.

1602

The States-General incorporates the Dutch East India Company.

1609

Henry Hudson, an English captain in the employ of the Dutch East India Company, sails the *Half Moon* to the North American coastline, searching for the fabled Northwest Passage to Asia. On August 26, he enters Delaware Bay, and on September 12, Hudson arrives at Manhattan Island. This excursion becomes the basis for the eventual Dutch claim to the lands of the North American coastline stretching from Cape Cod to Delaware Bay.

1611

On a second voyage to North America, this time under the English flag, Hudson navigates the Canadian Shield, including the bay that bears his name. He and a few others are set adrift in Hudson Bay by his mutinous crew before the crew sails back to England; a search the following year will reveal no trace of the explorer.

1614

Three Dutch businessmen form the United New Netherland Company, which receives from the States-General a monopoly on trading privileges in the area called New Netherland, defined as stretching from Cape Cod to Delaware Bay. The company's intent is to begin trade in furs with the natives of the region; in its brief existence, the company will charter four voyages to America, none of which will further this goal. By 1617, the United New Netherland Company has failed and its monopoly privileges have been revoked.

1621

The truce that has existed between Spain and the Netherlands expires, prompting a renewed Dutch interest in gaining an even larger share of maritime and colonial trade at the expense of Spain. To this end, in June, the Dutch West India Company is incorporated; it will begin operations in 1623.

1624

In the spring, the Dutch West India Company settles some thirty Walloon (French-speaking refugees from the southern Low Countries) families at Fort Orange (present-day Albany) on the Hudson River. This is the first settlement of the New Netherland colony.

1626

Peter Minuit, the first director general of New Netherland, arrives at Manhattan Island in May. Minuit will "purchase" the island from its resident natives for goods worth some sixty Dutch florins. Each party seems to have interpreted the transaction differently, however, with the natives envisioning Minuit's bargain as one for the use—rather than the exclusive possession—of the land. Minuit, however, names the settlement New Amsterdam, and it becomes the colony's principal settlement. Reversing its initial policy of dispersing settlements, the company decrees that settlers will be concentrated here, while outposts like Fort Orange will be limited to a handful of licensed traders. By 1628, there will be approximately 270 European residents of Manhattan Island, while Fort Orange will be home to only fourteen traders.

1629

The directors of the West India Company authorize the *Vryheden* (or "Charter of Freedoms and Exemptions"), a document that creates the basis for the "patroon" system. Qualified shareholders could earn the title of patroon (patron) by transporting at least fifty settlers to New Netherland. Patroon status confers upon its holder an extensive grant of land (4 leagues—over 70 miles in length), as well as seigneurial privileges (judicial and administrative powers) within that grant and limited access to the fur trade. Several patroonships will be established during the 1630s, but the only one that will have any measure of sustained success will be Kiliaen Van Rensselaer's Rensselaerwyk.

1638

In March, the colony of New Sweden is established with Fort Christina at Cape Henlopen on the Delaware Bay. The expedition of Swedish and Dutch settlers is commanded by Peter Minuit, who had left the service of New Netherland in 1632 and is now employed by the Swedish and Dutch sponsors of the colonial venture.

In the next four years, subsequent expeditions sponsored by the Swedish Crown will add a small number of settlers to New Sweden, which will become a Swedish royal colony in 1642.

1642

Sir Edwin Plowden, an Englishman, attempts to create a settlement at Salem Creek, in the southern portion of the lands claimed by New Netherland. Dubbing his settlement "New Albion," Plowden has to reckon with a number of problems, including a mutinous crew that abandons him and competition from New Sweden. The venture will ultimately prove unsuccessful, and Plowden will be forced to return to England in 1648, where he will be imprisoned for debt.

1643–1645

A period of warfare between the colonists of New Netherland and surrounding native peoples, dubbed “Kieft’s War” after the governor (Willem Kieft), whose policies sparked the conflict, nearly decimates New Netherland. At one point, the colonists are pushed back and confined to New Amsterdam by numerous and well-armed native warriors. Only by mobilizing the entire strength of the colony will the Dutch be able to force the natives into suing for peace.

1647

The Dutch West India Company’s monopoly on trade with New Netherland ends. It will, however, retain its policy-making powers and recommend that the colony’s chronic labor shortage be remedied through the increased use of African slaves. European laborers, the company reasons, cost too much to transport and are undependable workers.

In May, Peter Stuyvesant, a veteran colonial administrator, becomes Director-General of New Netherland.

1650

The Treaty of Hartford is concluded between the Dutch and English, defining the boundary between New Netherland and the New England colonies at 10 miles east of the Hudson River. The treaty represents a major concession to New England’s claims.

1651

In September, Peter Stuyvesant leads an expedition into the area claimed by both New Netherland and New Sweden, erecting Fort Casimir 6 miles below the Swedish Fort Christina. Fort Casimir will be a lightly populated outpost, home to only fourteen Dutch families by the spring of 1653.

1652–1654

Increasing commercial restrictions and tensions spark war between the Netherlands and England, the first in what will become a series of Anglo-Dutch conflicts over the next two decades.

1654

In May, Johann Rising leads an expedition from New Sweden that takes Fort Casimir. Stuyvesant decides to respond with an overwhelming show of force and end what he sees as New Sweden’s encroachment in New Netherland. On August 18, a fleet of seven Dutch ships, with 317 soldiers on board, retakes Fort Casimir, and forces the surrender of Fort Christina as well. This action effectively incorporates the colony of New Sweden into Dutch New Netherland.

1660

The end of the English Civil War and Oliver Cromwell’s Interregnum sees the Restoration of the monarchy in the person of King Charles II. English interest in New Netherland intensifies with the Restoration, as the Dutch remain England’s most significant commercial rival and the object of renewed focus on the part of the Crown.

1663

In July, the English ministry’s Council for Foreign Plantations appoints a special committee to examine the feasibility of taking New Netherland by force.

1664

King Charles II confers a large grant of land—in particular the area between the Delaware and Connecticut Rivers—to his brother James, Duke of York. James has significant personal interest in any project affecting Dutch commercial interests. As the director of the Royal African Company, James has already become the principal rival to Dutch control of the transatlantic slave trade; as admiral of the Royal Navy, he is attracted to any project that would help establish dominance of the English in the Atlantic world at the expense of the Dutch.

In April, a parliamentary committee issues a report declaring that the Dutch are England’s chief commercial enemies, providing the rationale for James’s planned conquest of New Netherland.

On August 28, an English expedition commanded by Richard Nicolls, James’s appointee as lieutenant governor, reaches the narrows of the Hudson River near New Amsterdam and demands a formal surrender of New Netherland. Prompted by his advisors to admit his position is an unfeasible one—the Dutch garrisons refuse to fight and English forces from Connecticut take Long Island by force—Stuyvesant will accede to Nicolls’s demands and surrender New Amsterdam on August 29.

A formal treaty of surrender is signed on September 8, transforming the Dutch colony of New Netherland to the English proprietary colony of New York. The terms of surrender include continued recognition of Dutch property rights (i.e., homes and land), while all European inhabitants of the province are recognized as “free denizens,” regardless of nationality.

On a practical level, there is significant continuity in terms of Dutch politics and culture in the early years of New York as an English proprietorship. James, as proprietor, makes enormous grants of land to his supporters, including all of the territory between the Hudson and Delaware Rivers (most of which eventually will become the colony of New Jersey).

1665

Acting Governor of New York Richard Nicolls promulgates the "Duke's Laws," the first codification of English law in New York. Reflecting the gradual nature of the Anglicization process, however, the laws at first cover only the towns of Long Island, the majority of which were English settlements even before 1664. Not until 1674 will Manhattan Island fall under the jurisdiction of the Duke's Laws, and these laws will not apply to the whole colony until 1676.

1667

In April, the Duke of York appoints Francis Lovelace to replace Nicolls as lieutenant (and therefore acting) governor. Lovelace will arrive in the colony eleven months later.

1672–1674

The third Anglo-Dutch War begins in the spring of 1672. During the conflict, the Dutch will reoccupy New York for over a year, beginning in July 1673. The October 1674 Treaty of Westminster ending the war returns the colony to England permanently.

1674

Edmund Andros becomes lieutenant governor of New York, beginning a period of more active oversight of the colony on the part of the English government. Andros concludes a firm alliance with the Iroquois Five Nations, and he will consolidate royal authority in New York. The latter becomes the most divisive aspect of the Andros regime, as his autocratic style and promotion of the economic interests of his friends make him many enemies. Adding to residents' dislike of Andros is his refusal to summon the colony's legislature; Andros will instead rule via courts of assize, whose members he alone appoints.

1677

New York City's cartmen go on strike and are prosecuted on contempt charges. Twelve are ultimately dismissed in what becomes the first instance of prosecuting striking workers in New York. In 1680, coopers in the city attempt to set collective prices for their labor; they are indicted and convicted on conspiracy charges—foreshadowing judicial tactics that will be used against organized labor in later eras.

1679

A smallpox epidemic sweeps through New York City, killing hundreds.

1681

The Duke of York recalls Edmund Andros to England, after receiving reports of civil unrest in the colony. Even after his recall, continued reports of strife and political breakdown force James to significantly reconsider how he governs his colony.

1683

Andros's replacement, Thomas Dongan, arrives in New York in August. He brings with him instructions from James, allowing for the creation of a colony-wide legislature, an attempt to alleviate political tensions within the colony.

The legislature will first meet at Fort James in October and issue the *Charter of Libertyes and Priviledges*. The document provides protections for individual liberties, as well as formalizing the prerogatives of the legislature. Dongan and his council approve it, as will James the next year. It will, however, never become the royally sanctioned law of the colony, as King Charles II will begin a reorganization of colonial administration in 1684 that will take a significantly different direction from that outlined by the *Charter*.

1684

The first intercolonial conference with Native Americans takes place in Albany, at Thomas Dongan's behest. Present are delegates from New York, Virginia, Maryland, and Massachusetts, as well as representatives from various Iroquois tribes.

1685

After the death of King Charles II in February, the Duke of York becomes King James II. Concurrently, the Lords of Trade meet and reconsider certain colonial charters, among them New York's. Acting on the recommendation of the board, as well as on his suspicion that the colony is moving too far out of the royal ambit, James II officially revokes New York's charter on March 3.

France's revocation of the Edict of Nantes sparks a surge of Huguenot immigration into New York. More French and Dutch will enter the colony than English during the 1680s and 1690s.

1686

In May, Governor Dongan receives instructions from the royal court detailing the revocation of New York's colonial charter. This revocation is part of James II's larger project, the creation of the Dominion of New England. The Dominion includes New York, New Jersey, and all of the New England colonies, and it will be administered by a royally appointed governor based in Boston. The consolidation of authority represented by the Dominion is highly

unpopular in the colonies, especially since the colonial legislatures are dissolved.

New York's legislature is curtailed in 1686, and the colony will become completely absorbed into the Dominion by 1688. Adding to the controversy is the appointment by James II of the controversial Edmund Andros as governor of the Dominion; his administration is based in Boston.

1688

The centralization of authority undertaken by James II in the colonies is matched in England, according to his critics, who are also concerned about the king's Catholicism and stated desire to normalize relations with England's longtime enemy France. The opposition crests in June, when a self-designated "council" convenes in England, declares itself Parliament, and offers the throne to James II's daughter Mary and her husband William of Orange, currently ruler of the Netherlands. On November 5, William and a small army arrive in England to force James II from the throne.

1688–1689

In the "Glorious Revolution" in England, James II is overthrown. He and his followers will ultimately be vanquished at the Battle of the Boyne in 1690.

William and Mary are installed as joint monarchs, after giving their assent to the Parliament-crafted Declaration of Rights.

1689

When news of James II's overthrow reaches Boston in April, a crowd will chase and imprison Edmund Andros, forcing him to surrender the reins of government. In New York, Andros's deputy flees the province.

Into the power vacuum steps Jacob Leisler, a German immigrant and devout Calvinist. In June, Leisler issues a proclamation for the authority of William and Mary; in August, a meeting of nine towns will appoint Leisler commander-in-chief of the province. From this point on, Leisler will be the de facto ruler of New York. His seizure of power represents not only current instability, but also a reaction by Dutch elements to the consolidation of English authority and a general antipathy in New York to the Catholicism of King James and Governor Dongan.

King William's War, which will last until 1697, is the first in a series of Anglo-French wars that will stretch into the 1760s.

1690

Two hundred French and native attackers from Montreal sack Schenectady on February 9, killing sixty-two British and Dutch colonists and capturing twenty-seven. Albany, previously hesitant to recognize Leisler's authority, reconsiders its position after the attack on Schenectady and reverses its position in March. In April, Leisler convenes an intercolonial conference at Albany to discuss the French threat. The conference is attended by representatives from Plymouth, Massachusetts, and Connecticut, but it accomplishes nothing constructive.

Also in April, a revived colonial assembly convenes in response to writs issued by Leisler, calling for elections. Unbeknown to the colonists, though, King William has appointed Henry Sloughter as New York's governor in January, rendering these activities technically illegal.

1691

Governor Sloughter arrives at New York on April 19 and demands that Leisler surrender the fort at New York City. Leisler refuses three times before doing so, and Sloughter has him arrested and charged with treason. Leisler's trial takes place from March 31 to April 17; he is found guilty and is executed on May 16. Leisler's Rebellion, as this period becomes known, comes to an end.

In April, Governor Sloughter convenes a new legislature, which issues a declaration of "Rights and Privileges" for New York. Because of its expansive interpretation of the legislature's powers, the document will be disallowed by the Lords of Trade in 1696.

Later in the summer, Sloughter dies. He is replaced the following year by Benjamin Fletcher, who also is an avid anti-Leislerian. His administration is a corrupt one, marked by bribery, embezzlement from customs revenue, and Fletcher's profiteering from trade with Native Americans.

1693

The Ministry Act provides for public support of the Anglican Church in four New York counties, an initiative that arouses the antipathy of the numerous members of the Dutch Reformed congregations.

1696

To stem Dutch discontent, Governor Fletcher issues a charter of incorporation to the Dutch Reformed ministers, which effectively places that denomination alongside the Anglicans as the colony's "established" church.

1698

Fletcher is replaced as governor by Richard Coote, Lord Bellomont, who inherits a colony in serious economic trouble. New York will be essentially insolvent by 1700.

1701

On the eve of war between England and France, New York concludes a treaty with the Iroquois Five Nations, establishing an uneasy armed neutrality

between the two parties. (The Iroquois also reach similar accommodations with the French.)

The Assembly passes an act granting suffrage to freeholders whose property has a net value of forty pounds. This group makes up approximately half of the colony's adult white males.

1702

A yellow fever epidemic kills over 10 percent of New York City's population.

Lord Cornbury becomes the new governor of New York. Cornbury's tenure (to 1710) will be marked by controversy and scandal, as he attempts consolidation of both his own political power and the religious sway of the Anglican churches by methods of dubious legality. Adding to the disdain and skepticism held toward Cornbury is his notorious habit of publicly parading in the latest English women's fashions.

1702–1713

Queen Anne's War rages between the English and French. As during King William's War, New York is the most vulnerable of England's North American colonies, with its frontier abutting French possessions in the Great Lakes and St. Lawrence regions.

In 1703, the Assembly orders the construction of two roads—one to Connecticut through New York and Westchester Counties, the other across Long Island to East Hampton. Similar projects for the Hudson River Valley are envisioned for the future.

1709

For the first time, the Assembly orders the issuance of paper money to act as the colony's circulating medium of exchange.

1710

Lord Cornbury is replaced as governor by Robert Hunter, who will be replaced by William Burnet shortly thereafter.

1711

The City of New York's Common Council establishes the city's first slave market with its declaration that all slaves for hire should, for employers' convenience, congregate at the Wall Street Market. By the early eighteenth century, over 10 percent of the city's population will be enslaved, and the figure will reach 15 percent by the 1720s.

1712

Latent fears of slave revolt are realized on the night of April 6–7, as about twenty-five slaves rendezvous and arm themselves with a cache of weapons they had stored earlier. Lighting outhouses and a barn on fire, the group waits for white townsmen to respond to the alarm. When they do, the slaves attack, killing nine and wounding seven.

A manhunt ensues on April 7, and the slaves involved in the uprising are either captured or killed. A total of twenty-seven African Americans are tried for conspiracy; twenty-one are found guilty and executed.

1713

The Treaty of Utrecht ends Queen Anne's War. Significantly for New York, the French promise to leave the peoples of the Five Nations within the British sphere of influence alone, seemingly ending the threat of violence on New York's frontier.

1722

A conference takes place in September at Albany, attended by delegates from New York, Pennsylvania, and Virginia, who meet with members of the Five Nations. The agreement reached between the colonists and the Iroquois stipulates that the native peoples will have freedom of travel throughout the region and will refrain from attacking any of the tribes to the south, reflecting the colonists' goal of intertribal stability along their frontiers.

1727

The colony extends its frontier defenses with the construction of Fort Oswego, on the Niagara frontier at the site of a two-year-old trading post.

1728

Governor Burnet is transferred to Massachusetts. After a three-year interregnum, William Cosby will receive royal appointment as governor of New York (his only apparent qualification is his being a favorite of the Duke of Newcastle). Cosby's administration, as was the case with many of his predecessors, is marked by corruption and controversy.

1734–1735

John Peter Zenger, printer of the *New York Weekly Journal*, stands trial for libel when the paper (the organ of a faction opposed to Governor Cosby) publishes several editorials scathingly critical of the governor. Zenger's defense argues that such statements, if they can be proved truthful, do not constitute libel, and the defense seeks to therefore convince the jury of the essential truth of the criticisms leveled at Cosby. The jury agrees, and Zenger

is acquitted.

The short-term result of the case is that political opposition to royal prerogative (in the person of the governor) is legitimized. The case's lasting significance is in the precedent it sets, which will ultimately become the basis for freedom of the press in the American republic.

James Alexander, a prominent member of the anti-Cosby faction, will write an account of the case (*Brief Narrative of the Case and Tryal of John Peter Zenger*), published by Zenger in 1736. The *Narrative* becomes one of the more significant expressions of the libertarian impulse within the colonies' developing political culture.

1737–1741

New York is governed by Lord De La Warr, who is an absentee governor for most of this period.

1739

The Assembly triumphs in its struggle with the governor over revenue, winning the right to make specific annual appropriations, rather than the vague long-term grants that had been the custom. This change effectively bestows the power of the purse on the Assembly, as these types of appropriations include the salary and miscellaneous funds for the governor. The Assembly is now able to also appropriate the salaries of other appointees, giving it significant leverage over the governor's power of appointment by the implication that an unpopular appointee's salary may simply be withheld by the Assembly. The Assembly's new power is symbolic of the process by which the assemblies (especially the lower, popularly-elected houses) throughout the colonies have been growing in sovereignty and significance in the eighteenth century.

From October 24 through November 19, English revivalist George Whitefield preaches to New York City crowds totaling in the thousands. Whitefield is the most prominent voice of the revivalist surge of evangelical Protestantism known as the Great Awakening, which has spread like wildfire through the colonies in the early decades of the eighteenth century. Originally strongest in the backcountry, the movement of "New Light" religion has permeated the older, more established communities of the Eastern seaboard by the 1730s, as evidenced by the massive attendance at Whitefield's sermons in New York.

1741

Striking bakers in New York City are put on trial in April, accused of forming an unlawful conspiracy in their refusal to bake bread for a week due to the high price of wheat. No convictions result from the trial, and the precedent is thus set for the utility of the strike, or "combination," as a tactic for New York laborers' future collective protests. This strike is only one of the several incidents that dramatically spike the levels of tension and fear in the city, the most dramatic result of which is the city's reaction to a rumored slave conspiracy.

On April 8, Fort George burns to the ground, and the next few weeks see a series of fires throughout the city that destroy both public and private buildings. Suspicions that the fires are arson combine with more general fears of African American unrest to produce a wave of anti-black hysteria among white residents. The city's population is almost 20 percent African American, and the specter of slave revolt has been present since the uprising of 1712.

Rumors about the fires being part of a larger conspiracy appear to be confirmed with the testimony of a 16-year-old indentured servant. Mary Burton takes advantage of the city leaders' promise of freedom and a hundred pounds in exchange for information by testifying she has heard the plans for a rebellion of workers and slaves being hatched in the tavern where she worked. The tavern's owner, his wife, two of their slaves, and a prostitute are all implicated, tried, and put to death. Burton's accusations continue, though, implicating more people—many of them black—as instigators of this conspiracy. The panic subsides only when Burton begins to accuse wealthy members of the city's white establishment of complicity as well; at this point, she is paid her one hundred pounds and dismissed.

A total of thirty-one blacks are executed (thirteen of them burned at the stake), and over seventy are deported from the colony, based upon evidence proffered by either Burton's accusations or coerced confessions and narratives of dubious legal validity. The conspiracy scare of 1741 is evidence of the power of racial fears and social unrest to spark outbreaks of public hysteria. Many historians remain skeptical whether such a conspiracy ever existed in the form imagined by New Yorkers.

1743

George Clinton becomes royal governor of the colony. He will serve until 1753, in what proves to be the longest tenure of any English-appointed governor.

1748

The Treaty of Aix-la-Chapelle ends King George's War between the English and the French. After the war, the French position in North America is a strong one, particularly in the upper Ohio Valley. The French in America embark upon an attempt to forge an alliance with the Iroquois, the only natives of the region who are still allied with the British colonists. Due to the aggressive expansion and cultivation of native alliances by the French in the Ohio/Great Lakes region following the treaty, New York becomes the most vulnerable of the British colonies.

1754

The French construct Fort Duquesne, at the point where the Allegheny and Monongahela Rivers join to form the Ohio River—a vital strategic location on the British colonial frontier. An expedition of Virginia militia, led by George Washington, surrenders to the French in early July after a failed attempt to oust them from Fort Duquesne.

To address the issues of western defense and the French and Native American threat, an intercolonial conference convenes at Albany in June and July.

Twenty-three delegates from seven colonies agree on the need for mutual defense, but a formal plan of union (proposed by Pennsylvanian Benjamin Franklin) that would create an intercolonial agency to supervise frontier defenses is rejected by the individual colonies' legislatures, as well as by the British ministry.

1755

British general Edward Braddock devises a three-pronged strategy to seize the most important French forts in the Ohio Valley and Great Lakes region, including Niagara and Crown Point (near Lake George in the upper Hudson River Valley). The attacks are a failure; Braddock and his forces are massacred in July along the Monongahela River.

William Johnson's troops, however, are able to defeat a force of French and native warriors, who had ambushed them at Lake George, although they suffer heavy casualties in doing so.

1756

Britain and France officially declare war on one another, and the conflict, begun in America in 1754, becomes global. This latest war between the two colonial powers is called the Seven Years' War in Europe and the French and Indian War in the colonies.

William Johnson succeeds where the British had failed during King George's War, when he concludes an alliance with the Iroquois, now considered British subjects.

In August, the British and their colonists suffer one of their worst defeats, as the French capture Fort Oswego, forcing a general British retreat eastward to Albany.

The Assembly passes a Stamp Act to raise revenue for defense; similar measures are passed annually for the next three years.

1758

In July, the British attack on the French forces at Fort Ticonderoga fails spectacularly. The British fail to penetrate the French outer defenses and are slaughtered by French musket fire and artillery in the attempt. The British regulars suffer over 1600 casualties, while colonial militia units lose more than 330 men.

King's College, in New York City, graduates its first class. The new college is sponsored primarily by the Anglican elite (with some support from conservative Dutch Reformed families). Its establishment represents, in part, a reaction of the "Old Light" religious orthodox to what they see as the dangerous "New Light" groups of the Great Awakening.

1759

By this time, the tide of war is turning in favor of the British. Confirming this shift in momentum is the defeat of the French at Fort Niagara in July. This victory snaps the French link between Lakes Ontario and Erie. At the same time, Fort Ticonderoga falls to the British and colonists, and the French abandon Crown Point.

1760

With the surrender of the French at Montreal on September 8, the last step in the capitulation of all French Canada, the American phase of the Seven Years' War, known as the French and Indian War, comes to an end.

1763

The Treaty of Paris ends the Seven Years' War; under its terms, the French cede their colonial dominion in North America to the British. The British government issues the Proclamation of 1763, which forbids land surveying expeditions or colonial settlement west of the Appalachians. Influencing this policy is the outbreak of Pontiac's Rebellion, provoked by Native American fears regarding the increasing scope and speed of English expansion westward. It takes almost two years for British forces and colonial militia to restore calm on the frontier.

1764

In October, the New York assembly sends three petitions to England protesting the Sugar Act, the Currency Act, and the impending Stamp Act, characterizing these measures as arbitrary and objecting to their being passed without the colonists' consent.

1765

The "Stamp Act Congress" meets from October 7 to October 24 in New York City. Delegates from nine colonies pass resolutions that judge the Stamp Act to be against Britain's unwritten constitution, arguing "[t]hat the only representatives of the people of these colonies, are persons chosen therein by themselves, and that no taxes ever have been, or can be constitutionally imposed on them, but by their respective legislatures." A nonimportation agreement is also implemented in an attempt to exert economic pressure upon Parliament.

Crowd action against the royally appointed stamp agents is significant enough to prevent the law from being enforced in New York, when it is due to go into effect on November 1. In December, New York's lawyers concur in a resolution to continue doing business without the required revenue stamps.

Parliament also passes a Quartering Act, mandating that the colonies pay the costs of their defense by British soldiers. The New York assembly resists

doing so, refusing to appropriate funds for this purpose.

1767

As a result of New York's defiance of the Quartering Act, Parliament passes the "Restraining Act" in December 1767, dissolving the Assembly until New York complies with the Quartering Act. The law never formally goes into effect, as word of its impending passage proves sufficient to force a reversal of the assembly's policy.

1768

In the fall, the largest colonial/Native American conference to date occurs at Fort Stanwix. The treaty that emerges from the proceedings represents a massive cession of American Indian lands; much of what will be modern-day central and southwestern New York comes under English control.

1771

The famous portrait artist John Singleton Copley takes up residence in New York City and enjoys a rush of clients. He will paint some of his best and most famous portraits of the revolutionary period.

1773–1774

Parliament passes the Tea Act in 1773, granting the East India Company and its licensed colonial brokers a monopoly on tea sales in the colonies. The law arouses a firestorm of protest, the most famous example of which is the Boston Tea Party of December 1773.

In New York, popular disapproval of the law is equally intense. The royal governor decides to send the East India tea back to England immediately after its landing in New York City. New York's Sons of Liberty have different plans, however. The first East India vessel arrives on April 19, 1774; three days later, a group of colonists, again disguised as Mohawk Indians, board the ship and dump its cargo overboard as had patriots in Boston the year before. The remaining East India ships turn around and sail back to England.

Responding to Boston's Tea Party, Parliament passes the Coercive Acts, a series of measures dubbed the "Intolerable Acts" by the colonies. One law closes the port of Boston until the East India Company is compensated for its lost property. On July 4, 1774, a large public meeting in New York City issues a formal protest against the law and collects funds for the aid of Boston's townspeople.

New York elects eight delegates to represent the colony in the Continental Congress, which convenes September 5 in Philadelphia. Among the measures agreed upon by the Congress is the "Continental Association," an intercolonial nonimportation movement.

1775

In January, the colonial Assembly (dominated by conservative loyalists) adjourns for what proves to be the final time. It conducts no more business thereafter and is prorogued permanently by the governor by early 1776.

In April, the first in a series of "provincial congresses" is elected. These bodies represent the growing revolutionary sentiment in New York and quickly assume the function of the colony's de facto government.

1776

The members of the Second Continental Congress approve and sign the Declaration of Independence. On July 9, New York's provincial congress ratifies the document and then reconvenes itself as the Convention of Representatives of the State of New York.

Also that day, a large New York City crowd celebrates independence by pulling down a large statue of King George III mounted on a horse, which had been erected in 1770. The lead statue is subsequently melted down to make bullets for patriot muskets.

From August through November, British and American troops fight battles in and around New York City and northern New Jersey, culminating in George Washington's forces retreating from the city and southward to Valley Forge, Pennsylvania. From this point until the end of the Revolutionary War, New York City will be occupied by the British, including the commanders of the British forces in America, Lord Admiral John Howe and Sir Henry Clinton.

Kevin M. Gannon

North Carolina

Before 1500

North Carolina is home to several large Native American communities, including the Cherokee in the west and the Tuscarora in the east; these large

tribes are linguistically related to the Iroquois. They subsist by maize agriculture and hunting. Numerous smaller tribes of Algonquian speakers inhabit resource-rich coastal areas. The Siouan-speaking ancestors of the Catawba live in the Piedmont region. Native North Carolina is strikingly diverse.

1524

Giovanni da Verrazano, a Florentine sailing under the auspices of King Francis I of France, sights land near Cape Fear (in modern-day North Carolina). He reports friendly natives, abundant wildlife, and stunning foliage, though he mistakenly believes, never seeing the mainland, that he has found the Pacific Ocean.

1526

Intrigued by Verrazano's voyage, Spanish official Lucas Vázquez de Ayllón lands 500 men and women from Hispaniola at the mouth of the Cape Fear River. Their provision ship sinks, they choose unhealthy swampland for their colony, and they begin to die of disease at an alarming rate. Less than a year later, 150 survivors return to the Caribbean.

1540

Hernando de Soto's *entrada*, or expedition, passes through the mountains of North Carolina on the way to Tennessee and parts west. The Cherokees entertain and provision the Spaniards with corn while they search fruitlessly for gold for about a month.

1584

A landing party financed by Sir Walter Raleigh, a staunch advocate of colonization with the ear of Queen Elizabeth, comes ashore on Roanoke Island in July. The party of explorers, including the artist John White, remains on or around Roanoke for the next six weeks. They collect samples of American flora and fauna and establish friendly trading relations with local Native Americans. Two Native Americans, Manteo and Wanchese, return to London with the party, where they become instant celebrities.

1585–1586

Another Raleigh-sponsored expedition, this one intended to establish a permanent English military presence, arrives at Roanoke in July. After barely surviving the first winter, the colonists return to England.

1587

Governor John White and 115 men, women, and children arrive at Roanoke in the summer. Virginia Dare is born—the first English child born in North America. John White returns to England for supplies. When he returns in 1590, the colony has disappeared. White discovers destroyed buildings, a ransacked fort, and the word “Croatoan” scratched into one of the stockade posts. Though search parties look for the colonists through the late sixteenth and early seventeenth centuries, they are never found. Their disappearance is shrouded in rumor and legend. They may have been assimilated into local tribes, killed by local tribes, or killed by Powhatan during his conquest of the area in the early 1600s.

1607–1620

Expeditions from Jamestown report fertile territory and friendly natives in North Carolina. English settlement begins slowly.

1650

Virginia officials begin to grant land in North Carolina to hunters, trappers, traders, farmers, and gentlemen. By 1663, more than 500 English people live on Albemarle Sound. By 1665, Albemarle County government is established, along Virginian lines, with a governor and legislative council. Planters begin to grow tobacco for profit, using indentured servants and African slaves, though Africans never constitute the same percentage of North Carolina's population as they do in South Carolina or Virginia.

1663

King Charles II rewards the political allies who helped him to the throne in 1660 by naming eight of them lords proprietors of the new province of Carolina. The charter granted by Charles II defines Carolina broadly as the territory stretching from the present Virginia-North Carolina border to below Spanish St. Augustine, and from the Atlantic to the Pacific. The lords proprietors are granted expansive powers to govern and design Carolina society.

1664–1665

A colony is established by John Vassall of Barbados on the Cape Fear River. Other Barbadians and New Englanders join him. The colony does not prosper and is abandoned by the summer of 1667.

1669

The lords proprietors draft the Fundamental Constitutions, trying to establish a hierarchical, orderly society in Carolina. For a time, the colonial legislature loses its power to initiate legislation. The Fundamental Constitutions undergo constant revision and are never fully enacted by the colonists.

1677

Culpeper's Rebellion strikes Albemarle County. Upset with misgovernment and a tax on tobacco, the area's most profitable export, a group of angry colonists jail and try the colony's governor, John Miller. Though Miller escapes and flees to England, Culpeper's Rebellion succeeds in reestablishing representative government. The proprietors respond first by appointing an incompetent and corrupt governor, and later by abandoning the Fundamental Constitutions altogether.

1701

The Church of England is established in North Carolina. A tax is approved to support ministers and build churches. Quakers oppose these measures, and Quaker and Anglican factions battle each other for control of the government for more than a decade. Colonial North Carolina is also home to Baptists, Presbyterians, and Moravians. The Church of England remains relatively weak here throughout the colonial period.

1706

The town of Bath, on the Pamlico River, is formally incorporated. By now, there are five English counties, though Bath County (like future settlements) receives fewer representatives in the colonial assembly than its older neighbors. Bath soon rivals Albemarle as the population center of North Carolina.

1709

Baron Christoph von Graffenried, a Swiss nobleman, secures permission to settle 650 Swiss and Germans on 17,500 acres of land on the Neuse River. He names his settlement Neuse-Bern, which the English hear as "New Bern." Though von Graffenried has paid colonial officials, John Lawson, the surveyor-general, and local Native Americans for the land, the Tuscarora are particularly upset by the new colony. The colony struggles to survive.

1711

The Tuscarora, together with other Native American allies, angered by sharp traders, English encroachment, and the continuing enslavement of native women and children, attack the settlement at New Bern. On September 22, 1711, a coordinated surprise attack devastates the Europeans along the Neuse, Pamlico, and Trent Rivers. The Tuscarora take twenty or thirty prisoners and kill between 130 and 140 Europeans. The survivors of the attack attempt to retaliate, but only end up suffering further loss of life. Bath County is all but abandoned during the Tuscarora War.

1712

South Carolina sends a force of 500 Native Americans, largely Yamasees, and thirty white men under Colonel John Barnwell to the aid of North Carolina. Barnwell and his men march through the North Carolina countryside, taking a Tuscarora fort, destroying more than 350 Tuscarora houses, and burning thousands of bushels of corn. The Yamasee also take native slaves at a rate that terrifies the Tuscarora.

In February, Barnwell's army lays siege to the Tuscarora stronghold of Hancock's Town. He is forced to withdraw as he is sick, many of his Native American allies have deserted, the Tuscarora hold several white hostages, and provisions are running low. Barnwell negotiates a treaty that he feels will end hostilities, although on the return march, he and his allies capture more slaves. The Tuscarora, enraged by this slave raid, resume their attacks in the fall.

1713

South Carolina forces, this time under Colonel James Moore, and numbering thirty-three whites and 1,000 Native Americans, including Cherokees, attack the Tuscarora at Fort Nohoroco on March 25. The result is a crushing defeat for the Tuscarora—some 950 men, women, and children are killed or captured. This effectively ends Tuscarora resistance to colonization, although a formal treaty is not drawn up until 1715. Many Tuscaroras decide to abandon North Carolina entirely and relocate to New York, where they join the Five Nations of the Iroquois in 1722.

1715

A law is passed allowing planters to continue the practice of manumitting their slaves, provided the freed slaves leave North Carolina within six months.

1718

Edward Teach, the pirate known as Blackbeard, sets up shop in Bath. From this base of operations, he terrorizes not only foreign vessels, but English and colonial ships as well. In November, Blackbeard is killed in combat off Ocracoke Inlet. Also in November, Major Stede Bonnet, known as the "gentleman pirate," is captured. In December, he is hanged.

1729

The proprietors yield to Crown demands to sell their interests in Carolina. After years of mismanagement and crisis, North Carolina becomes a Crown colony and comes under the purview of an efficient, powerful, and rapidly expanding British colonial bureaucracy. The Crown concerns itself with matters of empire, and the colonial legislature focuses on local issues. These two bodies come into conflict a number of times before the War for Independence begins.

At this point, North Carolina contains a population of 30,000 white people and 6,000 enslaved Africans, most of them workers on tobacco plantations, although some also serve urban masters. North Carolina's population will increase nine times by 1776; it will eventually be the fourth most populous colony, behind Massachusetts, Virginia, and Pennsylvania.

North and South Carolina, which have been administered by separate colonial governments since 1691, begin negotiations to draw an official boundary

line between the two colonies.

1730s

A massive movement of people from other North American colonies and Europe settles the Piedmont region of North Carolina. These immigrants are predominately Scots-Irish, but Germans (some of them the mislabeled Pennsylvania Dutch) form a sizable minority in the region. Most of the Scots-Irish and Germans come from Pennsylvania, while other groups arrive from New Jersey, Virginia, and Maryland. These colonies suffer from overcrowding, while North Carolina has a seemingly inexhaustible supply of land for settlement.

1731

A road connecting Cape Fear to Virginia is completed, using Native American guides and white laborers. This opens up Cape Fear to increased white settlement and facilitates trade between North Carolina and Virginia.

1732–1733

Highland Scots begin to receive grants up the Cape Fear River, in what would become Bladen County. A steady stream of immigration from Scotland continues throughout the colonial period. In the Highlands, the Scots had lived in exceedingly poor conditions. In North Carolina, the ready availability of timber allows the construction of substantial homes, and the newcomers are able to maintain strong community ties through the continued use of the Gaelic language and traditional Scottish clothing.

1739–1743

The War of Jenkins' Ear, a conflict between England and Spain erupts, and King George II calls upon all the American colonies to fight Spanish interests in the Americas. North Carolina responds by raising an army of 400 men to join forces with other colonies to attack Cartagena, on the mainland of South America in present-day Colombia. The attack is an unmitigated disaster, as the invaders face a skilled, entrenched opponent and a tropical disease-infested environment with which they are unfamiliar and ill prepared. Only twenty-five of the 400 men return. During the war, Spanish ships also wreak havoc on North Carolina shipping.

1744–1748

The War of Jenkins' Ear turns into King George's War, which pits England and Austria against France and Prussia. This begins a period of cooperation between colonies, particularly North Carolina, Virginia, and South Carolina, which would last through the remainder of the colonial period.

1753

A group of Moravians, under the leadership of Bishop August Gottlieb Spangenberg, settles in the Piedmont region, at a town they name Wachovia. The Moravians advocate communal ownership of property and cooperation among the various members of their society.

1758

During the French and Indian War, 300 North Carolinians, including some Native Americans, participate in the capture of Fort Duquesne.

1759

An attack by Cherokees allied with the French inflicts considerable damage on the North Carolina backcountry. Both Carolinas combine to send an expeditionary force into Cherokee territory, forcing their removal to remote mountain country.

1763

The French and Indian War concludes, and France relinquishes any claim it has to North America. The Proclamation Line of 1763, much maligned by colonists and land speculators in Virginia, has little effect on North Carolina, as there are hardly any white North Carolinians living in the mountains.

Governor Dobbs meets with other colonial governors and John Stuart, a British Indian agent at Augusta. They host a meeting of about 700 Native Americans from throughout the southeast. North Carolina pledges peace and perpetual alliance with the Cherokee, Chickasaw, Choctaw, Creek, and Catawba.

1765

North Carolina, like other American colonies, vehemently opposes the Stamp Act. At the grassroots level, the Sons of Liberty organize rural resistance. In Wilmington, at the end of October, they protest, shouting and drinking toasts to liberty.

1766

The legislature passes an act designating New Bern as the permanent capital of North Carolina. To this point, the assembly had met variously at New Bern, Wilmington, Bath, and Edenton.

1767

Governor William Tryon, with troops, Native American guides, and interpreters, undertakes an expedition to define the western boundary of North Carolina. The country proves too rugged, and Tryon's party turns back. In fact, the boundary line has little effect, as hunters, traders, and later farmers cross through Cherokee territory on the way to farmland in Tennessee and Kentucky.

1768

The Regulators, a group of disaffected settlers from the western counties of North Carolina who desire the right to regulate their own local government, formally organize. They believe that powerful interests along the coast are mismanaging the colony. The Regulators are not simply vigilantes; they are also a formidable political movement, whose efforts are interrupted by the onset of the War for Independence.

1770

In an effort to weaken the Townshend Act duties, Cape Fear merchants pledge their support of nonimportation.

1771

Queens College is chartered in Charlotte, Mecklenburg County. It is the first and only college to be founded in North Carolina by the colonial government, although it reverts to private ownership in 1772.

1774

At Edenton, fifty-one women led by Penelope Barker sign an agreement to do whatever they can to support the American cause. The Edenton Tea Party is an early example of female political activity in association with the resistance to the British.

The early 1770s also see the formation of a number of Committees of Safety, designed to keep up pressure on the British and enforce nonimportation among colonists.

1775

In response to the deteriorating situation in Boston, the Hillsborough Congress convenes. The Congress authorizes the use of 1,000 professional soldiers and 3,000 less skilled minutemen. Despite this, North Carolina is sharply divided and poorly prepared to fight a war.

1776

The Provincial Congress meets at Halifax. This body draws up a constitution that establishes the supremacy of the legislature. On April 12, the Congress votes to send a delegate to the Second Continental Congress, thereby declaring itself independent from Great Britain and tying its fate to the other rebellious colonies.

Matthew Jennings

Pennsylvania

Before 1600

Human occupation of the area today known as Pennsylvania began more than 16,000 years ago. The earliest evidence of these settlements is found in present-day Washington County.

When Europeans first arrive in this area, Pennsylvania is occupied by native peoples, including the Lenni Lenape (later called the Delaware), the Susquehannock, the Shawnee, and members of the Iroquois Confederacy, otherwise known as the Five Nations (later, the Six Nations when the Tuscarora joined). Other tribes (not yet identified with certainty) occupy western Pennsylvania.

1609

An expedition under Henry Hudson explores the Delaware River.

1638

Swedish settlers arrive in the Delaware Valley on the ships *Kalmar Nyckel* and *Fogel Grip* after sailing for four months from Gothenburg. They construct Fort Christina at present-day Wilmington, Delaware, and leave behind a garrison of twenty-four men, who begin trading with the Native Americans. The settlement, named New Sweden, will eventually include parts of present-day New Jersey, Delaware, and Pennsylvania.

1639

The *Fogel Grip* arrives at Fort Christina from St. Kitts with an Angolan slave, Anthony Swartz, the first slave in the Pennsylvania colony.

1640

The first families arrive in New Sweden on the return voyage of the *Kalmar Nyckel*.

1643

The ships *Fama* and *Swan* arrive from Sweden with fifty more settlers and the first colonial governor, Johan Printz. Printz constructs Fort New Gothenburg on Tinicum Island, southwest of the future site of Philadelphia.

1645

At Kingsessing, in what is now Philadelphia, the first gristmill is constructed on Cobbs Creek.

1655

Peter Stuyvesant and an armada of seven ships with 317 soldiers on board invade New Sweden. The colonists offer no opposition and surrender to the Dutch, to whom they pledge their loyalty.

1656

The ship *Mercutius* arrives at Tinicum Island with fourteen Swedish and ninety-two Finnish settlers. The Finns settle at what will become Marcus Hook, Pennsylvania.

1662

Governor Printz's daughter sells Tinicum Island to Joost de la Grange, a Dutchman.

1669

The French begin their exploration and survey of lands in western Pennsylvania.

1681

William Penn, a Quaker, receives Pennsylvania in the form of a land grant from King Charles II in payment for a royal debt owed to Penn's father. Penn sends William Markham, his cousin, to take control of the land grant and makes him governor.

1682–1683

In October, the ship *Welcome* brings Penn to an area near Chester, Pennsylvania. The First Frame of Government is written, and the first three counties are created: (1) Philadelphia County, whose name means "brotherly love." (2) Chester County, whose name is derived from Cheshire, England, home of many early settlers; it will become an inland county in 1789, when a part of it is taken to create Delaware County. (3) Bucks County, named for Buckinghamshire, England, where the Penns had resided for generations.

Penn summons the first General Assembly to Chester. The Assembly joins the Delaware counties with Pennsylvania and adopts a naturalization act.

A large wave of immigrants arrives from the British Isles and Germany.

The Great Law is adopted. It guarantees liberty of conscience and becomes the basis of Pennsylvania laws. The death penalty is applied only to acts of murder and treason.

From 1682 into 1683, the second Assembly, with Penn's cooperation, creates the Second Frame of Government. Philadelphia, Bucks, and Chester County courts replace the Upland Court, which had been established by the Duke of York in the 1670s with jurisdiction over parts of New Jersey and Pennsylvania. The English, who have become the majority with the arrival of hundreds of Quaker settlers, require the Swedish settlers to naturalize as English subjects and employ them to negotiate treaties with the native peoples.

Also in 1683, German immigrants, arriving in Pennsylvania, form Germantown outside of Philadelphia.

1684

Penn sets aside land for future Swedish settlement in the present Upper Merion Township and Montgomery County area. Many Swedes and Finns sell their land and move out of Pennsylvania into West Jersey.

1688

The first official written protest against slavery in North America is signed by the Germantown Quakers.

1690

The first paper mill in North America is built near Germantown by William Bradford.

1693

The Wicaco and Crane Hook congregations write to King Charles XI of Sweden asking for Swedish Bibles, new ministers, and hymnals.

Whites in Philadelphia are permitted to imprison blacks found without passes.

1694

Members of German Pietist sects settle in Pennsylvania.

1698

The first public school is established in Philadelphia.

1701

Philadelphia officially becomes a city.

Andreas Rudman, pastor at Wicaco, successfully persuades Penn to put aside 10,000 more acres specifically for future Swedish immigrants. This land is located near Manatawny Creek alongside the Schuylkill River.

Penn grants the Charter of Privileges to his colony of Pennsylvania, establishing a unicameral legislature and a policy of religious freedom.

1703

Delaware separates from Pennsylvania, forming its own government.

1711

A new law is passed banning slavery in Pennsylvania, but it is overruled by Queen Anne and becomes ineffective.

1712

A law is passed outlawing the slave trade in Pennsylvania.

1714

Amish settlers begin to inhabit Berks County.

1716

Plays, music, and dancing are condemned by the Quakers in a public statement.

1721

Pennsylvania creates its first game law and officially declares its first deer season.

1723

The Pennsylvania Land Bank issues its first notes, which are secured by the property of the bank owners.

1726

The poor riot over food prices in Philadelphia.

1727

Horticulturalist John Bartram begins to explore the forests of western Pennsylvania.

The Junto antislavery group is organized by Benjamin Franklin.

1728

Benjamin Franklin starts his own printing shop in Philadelphia.

The first botanical garden in North America is opened in Philadelphia by John Bartram.

1729

Benjamin Franklin publishes *A Modest Enquiry into the Nature and Necessity of a Paper Currency*. He receives a contract to print the third issue of notes of the Pennsylvania Land Bank and becomes the publisher and proprietor of the *Pennsylvania Gazette*.

The first music is printed in Philadelphia.

1730

In spite of Quaker opposition to slavery, 4,000 slaves are brought to Pennsylvania.

1731

Benjamin Franklin establishes the first public library in the colonies in Philadelphia.

1732

Poor Richard's Almanack is published by Benjamin Franklin.

The "Colony of Schuylkill," the first known fishing club in the colonies, is created in Pennsylvania.

1733

English immigrant and entrepreneur John Harris receives the right to operate a ferry across the Susquehanna River in what later becomes Harrisburg.

1736

The Union Fire Company is established by Benjamin Franklin.

1737

Benjamin Franklin is appointed postmaster of Philadelphia.

Pennsylvania fraudulently acquires 1,200 square miles of land that belongs to the Lenni Lenape. The fraud is known as the Walking Purchase. Colonial officials show an old, unsigned draft of a deed to the native people, presenting it as a legal contract, and tell the Lenni Lenape negotiators that their tribal ancestors signed it. The supposed contract says that the Penns can have as much land as the Penns can cover in a day-and-a-half's walk. The Lenni Lenape agree to let the Penns do the walk. The Penns clear a straight path and hire the three fastest runners who run instead of walk. Even though the Lenni Lenape are unhappy with the way the runners "walk," they feel they have to respect the wishes of their ancestors and move westward.

1739

Johann Klemm of Philadelphia finishes the first pipe organ built entirely in the colonies.

Benjamin Franklin and others petition the Pennsylvania Assembly to remove tanneries from commercial districts and stop waste dumping, because both lower property values and compromise disease control and fire fighting. Even though the Assembly accepts the requests, the waste dumping continues.

1740

George Whitefield, a renowned traveling preacher, gives numerous public sermons in Philadelphia.

Members of the American Band establish the first association to support concerts in the colonies.

1741

The first magazine in the colonies, *The American Magazine*, is published by Andrew Bradford in Philadelphia.

1742

Gustavus Hesselius, an immigrant from Sweden, manufactures the first American spinets and virginals.

Many pastures and crops in Pennsylvania are destroyed by flocks of grasshoppers.

1743

The American Philosophical Society, the first association in America to be dedicated to the natural sciences, is formed.

Christopher Sower in Philadelphia publishes the first Bible printed in the colonies.

1745

Susanna Wright, a poet and frontierswoman, becomes the first female notary public of the colony. She serves as legal counselor to her neighbors, who

are mostly illiterate, and also as an arbitrator in disputes involving property.

1748

The Ohio Company is created mainly to trade on a large scale with Native Americans and to influence settlement in southwestern Pennsylvania.

1749

Benjamin Franklin is named the first president of the Academy, a proposed school that later becomes the University of Pennsylvania.

The first acting company to present several plays in one theater within a season is created in Philadelphia.

Captain Pierre-Joseph Céleron de Blainville claims France's right to the Indian God Rock region, located south of Franklin.

1751

In honor of Penn's Charter of Privileges, the Liberty Bell is cast.

The Free Charity School opens in September, following the opening of the Academy, first proposed in 1749, in January.

Benjamin Franklin publishes *Experiments and Observations on Electricity* in London. Franklin and Dr. Thomas Bond establish Pennsylvania Hospital. On May 11, they are granted a charter by the legislature to establish a hospital that will provide care for the poor and mentally ill.

1752

Benjamin Franklin performs his famous electricity experiment with a kite.

1753

The French build forts in western Pennsylvania, claiming the region.

George Washington orders the French to move out of northwestern Pennsylvania.

1754

Washington loses a battle against the French at Fort Duquesne (present-day Pittsburgh).

Franklin's "Plan of the Union" is adopted by English colonies.

The Pennsylvania Gazette contains the first recorded American political cartoon. Created by Benjamin Franklin, the cartoon attacks the fragmentation of the colonists concerning frontier defense.

1755

The British, in cooperation with Virginia militiamen, try to take Fort Duquesne, but are massacred in an ambush.

Settlers in the Lehigh River Valley of northeastern Pennsylvania are attacked by Native Americans. As a result, they move to the more settled southeast for safety.

The College of Philadelphia, which later merges with the Philadelphia Academy to form the University of Pennsylvania, is founded.

1756

Declaring war on the Shawnee and Delaware, Pennsylvania begins to build forts along the frontier and fills them with men and supplies.

1757

Francis Hopkinson produces *Alfred*, a masque by Thomas Arne, at the College of Philadelphia.

John Palma directs the first public concert in Philadelphia. When the second concert is given, George Washington attends.

1758

Pennsylvania signs a peace treaty with the Shawnee and the Delaware.

The Society for the Propagation of the Gospel in Philadelphia, trains slaves in singing the Psalms.

The French retreat from Fort Duquesne. As they leave, they burn the fort down. Now under British control, a better fort is built in the same place, named Fort Pittsborough, or Fort Pitt, in an area today known as Pittsburgh. This region is of great importance, because whoever controls the fort also controls the trade that goes through it, which affects the northeastern parts of the Mississippi valley and surrounding areas.

British colonial commander George Washington surrenders to the French at Fort Necessity in southwestern Pennsylvania.

The British build Fort Bedford in south-central Pennsylvania.

The first school for black children is founded in Philadelphia.

1759

The French move out of western Pennsylvania.

Michael Hillegas, who will become the first treasurer of the United States, opens the first music store in the colonies in Philadelphia.

1760

An organ, which Francis Hopkinson will often play, is installed in Philadelphia College Hall.

1762

Pennsylvania makes plans to connect to the western territories via a canal.

William Allen, Chief Justice of Pennsylvania's Supreme Court and founder of Northamptontown, draws up plans for his rural village. It is later renamed Allentown since almost everyone refers to it as "Allen's Town."

In Philadelphia, Dr. William Shippen opens the first school of anatomy in North America.

1763

Native Americans start attacking settlers along the frontier. Fort Pitt is reinforced by more British troops. The Paxton Boys massacre the Conestoga Indians of Lancaster County in December.

1765

The first medical school in the colonies is established in Philadelphia.

Sons of Liberty groups are formed in Philadelphia and other colonial towns and cities.

1766

The Southwark Theatre, the first in the colonies to be known as an opera house, is established by the Old American Opera Company.

1767

Pennsylvania and Maryland are divided by the Mason-Dixon Line. This solves the boundary dispute that had existed between the Penns of Pennsylvania and the Calverts of Maryland.

Andrew Barton composes the first ballad opera by an American, titled *The Disappointment*. Due to its satirical plot, the show is cancelled.

1768

The settling of southwestern Pennsylvania causes problems with Native Americans, who claim the land as theirs. Initially, the Provincial Assembly reacts by threatening those who do not move out of native lands with the death penalty. When this action proves unsuccessful, the Proprietary Government of Pennsylvania is forced to purchase the land, extending westward to the Allegheny and Ohio Rivers, from the indigenous peoples.

John Dickinson publishes *Letters from a Farmer in Pennsylvania*.

1769

Offices are opened to sell the land purchased from the Native Americans; 3,200 applications are received during the first month.

Obadiah and Daniel Gore, two blacksmiths, manage to use anthracite coal successfully in their forge.

1773

A public road connecting Bedford County to Cumberland, Maryland, is opened.

1774

A committee selected by the residents of York County protests against British taxes and oppressive measures.

The Pennsylvania Assembly selects its representatives for the Continental Congress, which meets for the first time in Philadelphia on September 5.

The Continental Congress passes a Declaration and Resolves, which states that only colonial legislative bodies may enact legislation for the colonies and enacts a law creating the Continental Association in order to suspend commerce with Britain.

The Continental Congress asks colonists to forgo expensive activities like horse racing, cock fighting, and gambling, in order to concentrate on political protests against Britain.

1775

The colonies' first postal system is established, with Benjamin Franklin as its first postmaster.

Franklin is elected president of the Pennsylvania Society for the Abolition of Slavery, organized by the Quakers.

John Behrent builds the first American-made piano.

Imports from Pennsylvania are banned in Britain.

The Second Continental Congress meets in Philadelphia, starting on May 5. It declares a new name for the American colonies, "The United Colonies of America" and approves the creation of a Continental army of around 20,000 troops.

George Washington is appointed the Commander-in-Chief of the Continental army by the Continental Congress.

The Continental Congress approves the distribution of Colonel John Dickinson's *Declaration of the Causes and Necessity of Taking Up Arms*; the document attempts to justify the colonies' right to defend themselves. Thomas Jefferson originally had composed a similar document, but it was deemed far too militant.

The Continental Congress's Olive Branch Petition, a last attempt to offer a solution to the differences between the colonies and the Crown, is sent to the King, requesting that he end his military activities in the colonies.

The Continental Congress selects delegates to reach agreements with Native Americans.

The *Pennsylvania Gazette* publishes a story on how Parliament plans to try rebels in England for their offenses.

The Continental Congress establishes a secret committee to deal with spies and espionage in the impending war, passes a law creating the American Navy, and appoints a second secret committee to seek out foreign assistance in the struggle with Britain.

1776

The first official flag of the Continental navy is flown aboard the USS *Alfred* on the Delaware River.

Pennsylvania is the third largest English colony in North America, and Philadelphia is the second largest English-speaking city in the world after London.

Common Sense by Thomas Paine is published in Philadelphia by W&T Bradford. The pamphlet supports American independence, attacks the ideas of hereditary monarchies, and describes the future economic benefits of independence.

The Continental Congress allows for the enlistment of black soldiers, authorizes privateering against British ships, moves to suspend the slave trade, and opens all ports to any nation except for Britain.

Virginia delegate Richard Henry Lee proposes independence at a session of the Continental Congress, proclaiming that "these united colonies are, and of right ought to be, free and independent states."

Pennsylvania shifts control away from the Quakers and overthrows the Penn family's government. During this period, the state convention, which meets in Philadelphia, creates a Council of Safety that draws up the constitution and rules during the transitional period. The state constitution is adopted on September 28.

The Continental Congress appoints a committee to draft a declaration of independence, and selects Thomas Jefferson to compose the first draft.

The Continental Congress also adopts the first official United States flag, containing thirteen red and white stripes and thirteen stars on blue; begins to print paper money; and declares that loyalists are guilty of treason against the united American colonies.

The importation of slaves in the thirteen colonies is forbidden by the Continental Congress.

The Continental Congress passes a resolution calling for independence from Great Britain. John Hancock approves and signs the Declaration of Independence. The Congress declares independence on July 2, and it adopts the Declaration of Independence on July 4. The Declaration is read publicly for the first time on July 8 in Philadelphia.

The United Colonies are renamed the United States by the Continental Congress.

Pennsylvania approves its Declaration of Rights, which guarantees certain rights and freedoms to the state's citizens, and it ratifies its constitution.

The Continental Congress gives General George Washington dictatorial powers to be used for making urgent war decisions.

1777

The Declaration of Independence is reprinted, containing the signatures of all the signers, and Congress decides on the design of the new flag.

British and American forces battle at Brandywine Creek. Congress votes to buy blankets for soldiers in the Continental army.

Congress is forced to flee from Philadelphia as British troops advance to occupy the city. It meets in Lancaster, Pennsylvania, for three days and then moves to York, Pennsylvania, where it remains until June 27, 1778.

In the battle of Germantown, Washington tries to stop the British from occupying Philadelphia, but fails due to strong resistance by the British at Chew Mansion. The British manage to capture Philadelphia, and Washington and his army retreat to Valley Forge.

The British take over Fort Mercer and Fort Mifflin, guaranteeing access to the sea through the Delaware River and making it possible for them to resupply their troops and continue to occupy Philadelphia.

The Articles of Confederation, the United States' first plan of government, is agreed upon by the Continental Congress, but the plan is not completely ratified by the states until 1781.

1778

The British leave Philadelphia in the spring.

Fort Mifflin is built during the spring and summer in present-day Tyrone Township to serve as a storage depot for ammunition and as a refuge for soldiers, miners, and settlers.

Congress ratifies an alliance with France and adopts the Articles of Confederation.

Pennsylvania takes over the College of Philadelphia and renames it the University of the State of Pennsylvania.

Congress authorizes a \$100 bounty for enlistment into the Continental army.

1780

Robert Morris establishes the Pennsylvania Bank, the first public bank in the United States.

Pennsylvania passes the Emancipation Act, ending slavery throughout the state. It becomes the first state to abolish slavery.

1781

Congress legislates the establishment of the finance, war, and marine departments.

The American Revolution ends in October with the British surrender to the Americans at Yorktown.

John Hanson is elected to the presidency of the United States under the Articles of Confederation.

1782

Congress adopts the new country's official seal.

1783

Benjamin Franklin publishes *Remarks concerning the Savages of North America*.

Pennsylvania soldiers protest the state's failure to pay them by surrounding Independence Hall. Congress relocates to Princeton, New Jersey.

The Treaty of Paris is signed, officially ending the war and stipulating British recognition of American independence.

1785

The Adgate Free School, a singing school, which operates until 1793, is found by the Urania Society. Andrew Adgate publishes several music instruction lessons.

Dr. Benjamin Rush, Robert Morris, Richard Peters, and others found the Philadelphia Society for Promoting Agriculture. It promotes improved methods to preserve soil, prevent disease, and discover better types of seeds used in farming.

1786

John Fitch operates the first vessel ever moved by steam on the Delaware River.

1787

The U.S. Constitutional Convention meets in Philadelphia.

John Aitken and Thomas Dobson establish a music publishing shop, the first in the country to print sheet music.

Black churchmen Richard Allen and Absalom Jones found the Free African Society to fight for African American rights.

Delegates convene in Philadelphia on May 17 to discuss possible revisions of the Articles of Confederation.

George Washington is elected on May 25 to preside over the Constitutional Convention. Instead, the delegates decide to write an entirely new governing document for the country.

Edmund Randolph presents the “Virginia Plan” to what is now the Constitutional Convention, which calls for a bicameral legislature with representation in the lower house based upon population.

Congress, still constituted under the Articles of Confederation, passes the Northwest Ordinance, which proposes the eventual creation of three to five states in the Northwest Territory. Also, delegates agree that slavery is to be barred from the territory.

Elbridge Gerry and George Mason put forward a proposal on the topic of a “Bill of Rights.”

Thirty-nine out of 42 delegates who attend the Constitutional Convention sign the Constitution of the United States, and it is sent to Congress for approval.

Congress reaches an agreement to send the Constitution to the states for ratification.

Pennsylvania ratifies the Constitution, becoming the second state to do so.

1789

Benjamin Franklin changes his will to appropriate funds to be used to build a pipeline that will bring fresh water to Philadelphia. Dirty water has caused disease in the area and the deaths of one-quarter of the city's population in just a few years.

The first Congress of the United States meets in Congress Hall in Philadelphia.

Arthur Holst

Rhode Island

Prior to the Arrival of Europeans

The original inhabitants of the Rhode Island area are the Wampanoag and Narragansett. Both speak variants of Algonquian. When Giovanni da Verrazano visits the region in the 1520s, both tribes will claim the island of Aquidneck (the site of Newport), although the Wampanoag temporarily have the upper hand. (Verrazano will rename the island Rhodes, because of its similarity to the famous Greek island of the same name.)

The Narragansett are probably the largest and most formidable tribe in southern New England, both before and after the arrival of the English. Ruled by two sachems, their territory is rich in natural resources. The Narragansett develop a semisedentary lifestyle based on hunting, fishing—particularly for shellfish—and corn agriculture. They also become the major wampum producers in the colonial era. A strict gender division orders village life: men are hunters, deep-sea fishers, diplomats, and warriors; women are farmers and producers of many goods used in Narragansett homes.

1524

Verrazano visits Narragansett Bay, and “discovers” dense populations of Wampanoags and Narragansetts. The explorer praises the harbor, but his French sponsors do not take an interest in the area. The Narragansett population is over 5,000, and its density is among the highest in North America—only in Mexico's central valley and the pueblos of the Southwest are these figures higher.

1614

Adriaen Block, a Dutch sea captain, visits the region. His voyage results in a reasonably accurate map and the naming of Block Island, but no significant Dutch colonizing activity follows.

1620

Religious refugees found the English colony of Plymouth on Wampanoag land made available as a result of a series of epidemics that ravage the area from 1616 to 1619. The militarily weak English ally themselves with the Wampanoag sachem, Massasoit (Ousamequin), but they are careful not to run afoul of the Narragansett.

1630

The Massachusetts Bay Company, led by John Winthrop, founds Massachusetts Bay Colony to the north of the Plymouth colony. The Great Migration begins, and native peoples throughout the region become alarmed at the sheer numbers of English people moving into New England. For the first few decades of English settlement, approximately 10,000 people per decade immigrate. By contrast, the Narragansett number around 5,000, and the Wampanoag fewer than 3,000. The Narragansett reach a tenuous agreement with the English, based largely upon the fact that both mistrust the

intentions of the Pequot and Mohegan tribes farther to the west.

1635

Roger Williams, who had arrived in Massachusetts several years prior, battles Winthrop's General Court over theological and governmental matters. Williams, the pastor in Salem, asks his church to repudiate the other Puritans because they remain tied to the Church of England. He eventually accuses the General Court of trying to subvert the authority of individual congregations and is banished, supposedly to return to England. Instead, prompted by Winthrop—the two men respect each other, though they disagree—Williams moves into a Wampanoag village. When Plymouth governor Edward Winslow insists that Williams leave his jurisdiction, he moves west.

1636

Williams founds Providence on land granted to him by the Narragansett sachems Canonicus and Miantonomo. He has met both leaders on previous trading missions, and probably impressed them by learning their language.

Also in 1636, a new controversy, the Antinomian Controversy, rips Massachusetts Bay and spins off another community of dissenters, led by Anne Hutchinson. After a dramatic trial, Hutchinson and some of her followers are banished in 1637.

1637–1638

The Narragansett join the English and other native forces in destroying the Pequot during the Pequot War.

1638

Antinomian refugees obtain the island of Aquidneck (also known as Rhode Island) from local Narragansetts through a treaty and establish the town of Pocasset (Portsmouth). This settlement includes eighty families.

1639

After a dispute with the Antinomians, William Coddington, a wealthy Puritan, moves to the south end of Aquidneck and founds Newport. With a prime location on the bay, and a population more inclined to commerce, Newport eventually becomes one of the largest cities in colonial America.

Also in the late 1630s, Samuel Gorton, a Puritan mystic, moves around Narragansett Bay, eventually settling at Warwick. Gorton believes in the equality of the sexes and in direct communication with God. Eccentrics like Gorton, Williams, and Hutchinson arouse suspicion in the larger Massachusetts Bay Colony, where people jokingly call the new territories “Rogue's Island.”

1643

Williams, in London to obtain official sanction for Rhode Island, publishes *A Key into the Language of America*, a book describing the Narragansett language and customs, as well as a tract outlining his principles regarding religious liberty.

Also in 1643, Plymouth, Connecticut, and Massachusetts Bay Colony form the United Colonies of New England and seek to divide heretical Rhode Island between them. The United Colonies periodically attack the Narragansett as well.

1644

A parliamentary patent obtained by Williams creates the colony of Rhode Island from the towns scattered around Narragansett Bay. Bringing the towns together proves more difficult, however. They meet for the first time in 1647, but the makeshift government falls apart in 1649. Threats from Plymouth and Massachusetts Bay force Rhode Islanders to band together. Still, the Rhode Island political situation is unstable and chaotic, and, at one point, several different men claim to govern the colony.

The patent itself allows the people of Rhode Island to select their own leaders and make their own laws, as long as they do not contravene English laws. Parliament reserves the right to govern at the highest level. The document lacks royal sanction, however, as King Charles I and Parliament are engaged in a bloody struggle for hegemony.

1658–1660

Williams unites the various factions within Rhode Island under a single government. This signals the end of a period of political chaos and factionalism.

In 1660, Quakers, heavily persecuted in both old and New England, begin to arrive on Aquidneck. In 1672, George Fox, the founder of the Religious Society of Friends, will visit the island. Following his visit, the Aquidneck Friends will keep meticulous records and participate actively in the political and economic life of the colony.

1663

After much legal wrangling with Connecticut—led by John Winthrop, Jr.—in London, Rhode Island receives a royal charter from the new king, Charles II. A boundary dispute with Connecticut will continue for decades, but Rhode Island's right to exist is confirmed.

1664

According to the charter, Rhode Island's General Assembly meets at Newport, and determines a distribution of magistrates that prevents Newport from dominating the council, though it does retain the largest delegation. Much of the power still rests in the hands of individual towns.

1675–1676

Increasing Puritan missionary activity and land grabbing provokes Massasoit's son Metacom (King Philip) to attack Plymouth and Massachusetts Bay. The conflict soon widens to include most of southern New England, both native and non-native. The Narragansett try to stay out of the fight at first, but United Colonies aggression forces them to join the Wampanoag. Connecticut's militia, aided by the Mohegan, inflicts severe damage on Narragansett villages. Many of the captives are sold as slaves. From a native perspective, the end of King Philip's War is an unmitigated disaster. Both the Wampanoag and Narragansett are reduced to insignificance in regional politics; Rhode Island, which has done little to support the war, stands to gain immensely from their defeat.

1687

As part of King James II's plan to bring all of the New England colonies under royal control, Rhode Island's government is subsumed by the Dominion of New England, a massive administrative unit that includes Massachusetts, Plymouth, Connecticut, New York, and the two New Jerseys. Edmund Andros, a military man, is elevated to the position of governor.

1688–1689

In the wake of the Glorious Revolution, Dominion government collapses. Rhode Island towns refuse to pay taxes to support the Andros regime, and when Andros escapes a Boston jail for Newport, he is temporarily imprisoned there. In 1689 Rhode Island resumes government under the earlier model set up by royal charter, over the objections of some men whose fortunes have risen during the Dominion.

During King William's War, a French fleet attacks Block Island, but it is foiled in its attempt to take Newport.

1696

In response to the increasing number of towns and a growing population, Rhode Island's colonial assembly expands to two houses. More magistrates and justices also are elected and appointed during this period.

1698

The General Assembly chooses Samuel Cranston as governor.

Cranston will serve for almost twenty-nine years. His able administration brings Rhode Island into the empire economically, while at the same time maintaining the local political privileges outlined in the colony's charter. Commercial interests in the growing city of Newport come to the fore during Cranston's tenure.

1699

Richard Coote, the Earl of Bellomont, becomes governor of Massachusetts, a position that has recently been upgraded to include command of Rhode Island's militia, much to the chagrin of that colony's residents. Upon his arrival in Rhode Island in 1699, Bellomont writes a scathing report, accusing the government of aiding pirates, overstepping its chartered authority, and generally behaving poorly. Cranston, his back against the wall, is forced to accept many of Bellomont's critiques. Bellomont dies suddenly, and Rhode Island is able to maintain some measure of independence. The assembly votes wholeheartedly to support Queen Anne's War and to pay an agent in London to represent its interests.

The border dispute with Connecticut continues to simmer, and each colony continues arresting the other's local officials.

1702–1713

During Queen Anne's War, Rhode Island sends men to aid in the failed invasions of Canada. More successful are the privateering missions carried out by Newport's sea captains. The colony holds its own in some minor naval battles with the French.

1708

In a reply to a questionnaire sent by the Board of Trade, Cranston indicates the nature of Rhode Island's economy. Centered at Newport, a serious shipbuilding industry has begun to develop; between 1698 and 1708, 100 ships have been built. Most of these are smaller ships, but larger vessels are also being built. With other colonies from Massachusetts to the Caribbean, Newport is engaged in Atlantic trade and has recently begun a profitable trade in African slaves. Local distilleries provide Newport with one of its most profitable exports: rum.

1714–1715

The government of Rhode Island begins to issue paper money after a serious shake-up in the government costs many officials their jobs. The bills are based on land and fairly quickly fall below their face values. Rhode Island's repeated issuance of paper money in the first half of the eighteenth century brings the colony into conflict with the Board of Trade in London and merchants in the Massachusetts Bay Colony. Still, the abundance of currency helps to finance public works projects, including new facilities for Rhode Island's government and military.

1719

Rhode Island publishes a compilation of its laws, with an eye toward centralizing authority over land sales and bringing Rhode Island's laws into compliance with the charter and English law.

1739

The War of Jenkins' Ear breaks out between Spain and Great Britain. As in previous colonial wars, Newport's privateering and commercial enterprises benefit from the conflict and do especially brisk business with non-British ports in the Caribbean.

1756

The Seven Years' War, the contest between Britain and France for North America that is known as the French and Indian War in the colonies, begins in earnest. Rhode Island raises the appointed number of men, but they do not see much combat in the first phases of the conflict. They participate in a failed attack on Fort Ticonderoga and help protect New York's frontier; they also take part in the campaign that sees Cuba fall into British hands. After the Treaty of Paris in 1763, Rhode Island finds itself deeply in debt, racked with internal dissension, and facing a reduced role in the Atlantic world.

1758

Publication of the *Mercury*, a newspaper, begins in Newport. The pages contain news and advertisements, as well as social announcements, indicating the Newport gentry's growing prosperity and taste for refinement in the years before the War for Independence. Providence's newspaper opens for business in 1762.

1760s

Rhode Island is the site of a bitter internal conflict between Samuel Ward and Stephen Hopkins, each of whom serves as governor on and off through the late 1750s and 1760s. Each spearheads a political party; Hopkins's is most powerful in Providence and the northern towns, while Ward generally wins elections in the southern towns. The two square off on matters of taxation, currency, and patronage. Interestingly, both Ward and Hopkins journey to Philadelphia for the First Continental Congress.

1764–1765

Rhode Island protests the passage of the Sugar Act and the proposed Stamp Act. Governor Hopkins pens *The Rights of the Colonies Examined*, a treatise concerning the right of Parliament to represent and tax American colonies, many of which have their own legislatures. The publication touches off a pamphlet war between patriots and loyalists in the colony.

In 1765, Samuel Ward is elected governor, and faces the Stamp Act crisis. Some street violence occurs in association with the Stamp Act, but the distributor resigns, and the General Assembly declares the act void and sends delegates to the Stamp Act Congress. On the day the Stamp Act is to take effect, business in Rhode Island goes on as usual, although a mock funeral procession lays a casket marked "Liberty" to rest.

1772

John Brown of Providence organizes a party of men to attack the run-aground *Gaspee*, a royal ship stationed in the port. They seize the ship's cargo and burn the vessel to the water line. An investigation is launched, but half-hearted investigators declare punishing the culprits a lost cause.

1776

Rhode Island asserts its independence from Great Britain on May 4, almost two months before the Second Continental Congress does so. The General Assembly votes to repudiate allegiance to George III, and accuses the king of tyranny. During the war that follows, Newport is held alternately by British and American forces, and in the closing years, by a French force. Newport continues to decline in commercial importance, as Boston and New York dominate regional commerce ever more effectively.

Matthew Jennings

South Carolina

Prior to the Arrival of Europeans

A wide variety of Native American groups inhabit South Carolina. They range in size from single-village communities on the resource-rich Atlantic coast, to larger interior nations, such as the Cherokees and Creeks, to centralized Mississippian chiefdoms, such as that at Cofitachequi (near present-day Camden). They speak a wide range of mutually unintelligible languages from the Muskogean, Siouan, and Iroquoian language groups. South Carolina's native population is stunningly diverse.

The southeastern native peoples do share some common cultural traits, though. They tend toward decentralized, village-centered forms of government (except in the case of Mississippian chiefdoms). They also divide society strictly along gender lines: Agriculture and domestic tasks are primarily female roles, while warfare and hunting are almost exclusively male provinces.

The period before the arrival of Europeans is one of major cultural change for Native Americans. Smaller, multiethnic, and, in some cases, multilingual polities (the forerunners of colonial-period tribes) are replacing centralized societies like those created by the Mississippians. In many cases, the shift is already underway before Native Americans encounter Europeans. In the case of Cofitachequi, Spanish disease will accelerate the process.

1494

The Treaty of Tordesillas divides the New World between Spain and Portugal. South Carolina theoretically falls under the control of Spain.

1520–1521

Lucas Vázquez de Ayllón, an official from Hispaniola, sponsors a slaving voyage to the Carolina coast, which brings seventy native Carolinians to the Caribbean to replace Arawaks.

1524

Giovanni da Verrazano, a Florentine sailing for the king of France, explores the coast of South Carolina.

1526

Ayllón undertakes an even larger voyage and establishes a short-lived colony somewhere on the South Carolina or Georgia coast. Five hundred men and women leave Hispaniola, but only 150 return. His flagship, carrying most of the supplies, sinks. Ayllón himself perishes in the undertaking, and his native interpreters run off into the woods.

1540

Hernando de Soto's deadly *entrada*, or invasion, cuts its way through South Carolina. Bringing horses, pigs, and war dogs (mastiffs), de Soto and his army move through the entire Southeast (ten future states) from 1539–1543, searching for treasure. At Cofitachequi, de Soto meets the female chief, or "Lady of Cofitachequi." Although he finds the pearls collected by the Native Americans to be irregular and inferior, he orders his men to remove around 200 pounds of them from ceremonial burial complexes, some from the body cavities of deceased natives. De Soto's trip through South Carolina results in epidemics and bitterness among the region's native peoples.

1562

The French, under the command of Jean Ribaut, found Charlesfort on Port Royal Sound. The colony fails miserably when Ribaut returns to France for supplies. The settlers mutiny, construct a boat, and sail for France. They make it home, but to survive the journey have to resort to cannibalism en route.

1565–1570

Pedro Menéndez de Avilés founds Santa Elena as a joint missionary, military, and colonial outpost. It becomes the administrative capital of *la Florida*, the Spanish name for the southeastern part of North America. Attacks by Sir Francis Drake and others force Santa Elena to consolidate with St. Augustine, farther to the South.

1629

King Charles I of England grants Sir Robert Heath "Carolana," a territory stretching from Virginia to Florida and from the Atlantic to the Pacific. Heath finances several failed attempts at settlement by the English and a handful of French Huguenots.

1663

Shortly after his restoration to the throne, Charles II grants Carolina to a group of eight lords proprietors, led by Anthony Ashley Cooper, soon to become the first Earl of Shaftesbury. The king gives them broad powers to develop a society by distributing land and constructing a government.

1669

The lords proprietors draft the Fundamental Constitutions of Carolina, a document designed to govern settlement of the new colony. The Anglican Church will technically be "established," or supported by the state, but Carolinians will be free to worship however they see fit. The Constitutions also divide the territory into provinces and counties, and they provide for the establishment of a new class of nobleman, the landgrave, who wields an extraordinary amount of political power. Essentially visionary in character, the Constitutions exert a relatively small effect on the actual white settlement of the colony. The colonial legislature never approves the measures, even though the proprietors modify them several times between 1669 and 1705.

1670

Settlers land on the Ashley River and officially found the colony of Carolina. A group of planters, dissatisfied with life on Barbados, moves into the area and quickly draws the ire of the proprietors, especially Anthony Ashley Cooper, who avers that John Yeamans, the first governor, is more concerned with personal profit than creating a utopian society in Carolina. The "Goose Creek men," Barbadian Anglicans who lived along Goose Creek (a tributary of the

Cooper River), dominate colonial politics for years, opposing the actions of the proprietors in nearly every regard. Meanwhile, African slavery begins to take hold in South Carolina, when Africans from the West Indies accompany their masters to the region. In fact, between 1670 and 1690, more than half of the colony's black population comes from the Caribbean.

1680–1683

The population center of the colony relocates to the carefully planned city of Charles Town (present-day Charleston), at the mouth of the Ashley and Cooper Rivers. The proprietors hope that colonists will settle in orderly towns like those of Puritan New England and avoid the dangers and irregularities of the sort that have befallen Virginia. Also in 1680, the proprietors begin a successful drive to recruit French Huguenots to settle in Carolina.

From 1680 to 1683, Carolinian colonists battle the Westo Indians, who had formerly been allied with the colony in a profitable Native American slave trade. The Westo are defeated and dispersed; most of the survivors trickle westward and are absorbed by the Creek nation.

1684

Lord Cardross and 150 Scots land at Charles Town in 1684, intending to settle between the Spanish and the English, at Stuart's Town on Port Royal. The Spanish destroy the settlement in 1686, and the twenty-five surviving Scots return home.

1691

South Carolina and North Carolina separate to a certain degree when a deputy governor of Carolina begins work in North Carolina. A separate colonial legislature convenes in North Carolina, and by 1712, the proprietors acknowledge the split and appoint separate governors for the two colonies.

1692

The Commons House of Assembly is established in South Carolina. There are two legislative bodies in the colony at this point: the elected commons house and the appointed council. This system is replaced by a unicameral parliamentary body. Although the exact date is unknown, rice has been introduced to South Carolina. Relying on the expertise of their slaves (preferring those with rice-growing experience in the Senegambia region of West Africa), white planters begin to produce the crop throughout the low country. Within decades, rice has become South Carolina's, and perhaps all of colonial North America's, most valuable export. The decade of the 1690s also sees a dramatic increase in the trade in deerskins with neighboring, and occasionally more distant, Native American communities.

1702

In an action related to the larger conflict of Queen Anne's War, Carolinians and Native American allies under James Moore capture and burn the Spanish city of St. Augustine, although they are unable to take the stone fortress of San Marcos.

1703–1706

Moore leads a new expedition to the panhandle of Florida, where a combined force of English and Native Americans destroy Spain's most populous and prosperous mission province, Apalachee. Moore's party succeeds in carrying off hundreds of slaves. The attacks impress Native Americans, who join the English in increasing numbers and shun the Spanish, who are not able to offer military protection or trade goods at the same level as the English.

In an era of increasing competition between Anglican and Dissenter factions in colonial government, in 1704, the Anglicans push through legislative acts (without Dissenter delegations present) that exclude Dissenters from serving in the Commons House of Assembly and establish the Church of England. The Dissenters send emissaries to London to plead their case with the proprietors. In 1706, both acts are repealed, and a new act for the establishment of the Anglican Church is passed. The Church of England will remain the official religious organization of South Carolina from 1706 to 1778.

1708

South Carolina becomes the first, and only, mainland North American colony with a significant African majority. Throughout the colonial period, African-born and African American slaves outnumber their masters. The demographic situation, which more closely resembles that of the British West Indies, is not lost on white slave masters, who attempt to regulate the lives of their slaves in increasingly intrusive ways.

1711–1713

Angered by unscrupulous white trading practices and the rapid expansion of European settlement in the region, Tuscarora Indians attack North Carolina; South Carolina raises an army of Yamasees and other allied Native Americans to come to that colony's aid. John Barnwell leads the army to some early success, but fails to take the main Tuscarora stronghold, King Hancock's Fort. James Moore, Jr., leads another expedition, which finally succeeds in bringing the Tuscarora under control. The remaining Tuscaroras migrate north to New York, where they join the Five Nations of the Iroquois in 1722.

1715

The Yamasee, formerly allies of South Carolina, launch a surprise attack on the colony. All along the frontier, Yamasees, Creeks, and their allies kill traders living in their communities. By 1718, when an alliance of the Cherokees and the English defeats the combined forces of most of the region's Native Americans, South Carolina lies in ruins. One half of the colony's farmland is deserted, and 6 percent of the white population is killed. Losses among Native Americans who opposed the English are even more severe. The Yamasee leave for the protection of Spanish Florida, where they continue to suffer at the hands of English slaving expeditions; only a handful survive the colonial period.

1719

The Revolution of 1719 brings the beginning of the end of proprietary rule to South Carolina. This is a well-planned and well-executed bloodless coup. Dissenters and the Goose Creek men agree to cooperate for the purposes of ending the proprietorship. Although all of the individual proprietors will not be bought out until 1729, 1719 marks the end of their effective rule. In addition, the position of royal governor in South Carolina does not retain much power. Real authority rests instead in the Commons House of Assembly in Charles Town and the Board of Trade in London.

1724

Parliament drops the bounty, or subsidy, it had previously given to Carolina's producers of naval stores. A year earlier, floods had destroyed a third of the rice crop. These factors, combined with inflation caused by an excess of paper money, produce a minor economic crisis in the colony.

1728

Yellow fever sweeps through Charles Town, adding an epidemiological crisis to an already tense economic and political situation.

1733

The founding of the colony of Georgia adds a layer of protection between South Carolina and the Spanish at St. Augustine. The skilled leadership of James Oglethorpe brings many Native American groups into alliance with the English in the 1730s.

1739

In what became known as the Stono Rebellion, a group of approximately twenty Angolan slaves under the leadership of Jemmy, attacked a store at Stono, about 15 miles outside of Charles Town. They seize powder and firearms and take off into the countryside, gathering followers along the way. By afternoon, the rebellious slaves number between sixty and 100. The revolt takes several days to quell entirely. By the time it is over, more than twenty whites, and an untold number of slaves are dead. The revolt, one of the largest in America, though relatively small by Caribbean standards, terrifies South Carolina's white population and spurs the development of a harsh new slave code in 1740.

The War of Jenkins' Ear, pitting the English against the Spanish, lasts from 1739 to 1743. Though trade is the main impetus behind the conflict, it provides a convenient excuse to attack St. Augustine. South Carolina participates in an expedition led by James Oglethorpe. A poorly timed naval and overland attack fails to take the fortress, and the English are forced to retreat.

1740

A massive fire sweeps through Charles Town, burning about one third of the city's buildings. Though no lives are lost, property damage is severe.

1750

Rice and, to a lesser extent, indigo have made the planter class of South Carolina the richest group of individuals in what would become the United States. Fully recovered from the effects of the Yamasee War, South Carolina also takes an increasing interest in the settlement of the midland and the Piedmont region of the colony.

1759–1761

Carolinians incite the largely pointless Cherokee War as their part of the larger French and Indian War (known as the Seven Years' War in Europe). Forces, under Governor William Henry Lyttelton and later under the British commander James Grant, succeed in routing the Cherokees and establishing a semipermanent border between South Carolina and the Cherokee towns. British and provincial troops quarrel continually, and on one occasion their officers duel.

1765

In the weeks leading up to the Stamp Act's enactment, Charles Town is the site of serious public disturbances, largely sparked by the Sons of Liberty. The protests are at once violent and creative. Some colonists, for example, parade a coffin labeled "American Liberty" through the streets and bury it in a solemn ceremony.

1766–1767

In successive years, crime waves sweep through the backcountry, now a fairly densely populated region. The leading men of the backcountry band together in what will become known as the Regulator movement. They seek law and order in the form of courts, jails, schools, and more proportionate representation in the Commons House, all four of which are lacking in the backcountry. In 1768, they pass the Plan of Regulation, which basically governs all of South Carolina outside of a 50-mile stretch along the coast. Eventually, after gaining some reforms, the group loses influence.

1776 and Beyond

The Revolutionary War is fought in South Carolina as a sort of civil war between those loyal to the king and those who support the American cause. When loyalists leave the state for Canada, the Caribbean, and elsewhere, they take about 5,000 slaves with them. An additional 25,000 slaves leave upon the departure of the British forces.

South Carolina also loses Britain as its primary trading partner as a result of the American victory in the War for Independence. After 1783 and the Treaty of Paris, however, South Carolina will remain a very profitable area devoted to plantation agriculture, African slavery, and the maintenance of an extraordinarily wealthy, and fractious, class of planters.

Matthew Jennings

Spanish Colonies on Mainland North America

Prior to the Arrival of Europeans

The areas eventually colonized by the Spanish include the western mountain and coastal portions of the North American continent, ranging from what is now the U.S. Pacific Northwest to Florida. The Native American population of these regions is extraordinarily diverse.

The Pacific Coast region is home to several major linguistic groups, including the Penutian, Athapascan, and Uto-Aztecan. These groups encompass hundreds of individual societies and tribes.

By 1000 c.e., sophisticated farming societies like the Anasazi, Hohokam, and Mogollon have developed in what is now Arizona and New Mexico, utilizing such methods as irrigation canals to practice intensive agricultural cultivation with maize (corn) as their primary crop. By the thirteenth century, however, these pueblo cultures have been affected by both climatological and social change. The environment has become more difficult for agriculture, and warfare between various groups contributes to the fragmented and smaller-scale cultures that will be encountered by the Spaniards in the sixteenth century.

In Florida, the Apalachee (the southernmost of the Eastern Woodlands peoples) are the largest native tribe, occupying what is now the Western Panhandle of Florida. For the most part, smaller, more dispersed, and nomadic groups such as the Caloosa and Timucua occupy the Florida peninsula.

1469

King Ferdinand and Queen Isabella are married, uniting the two largest Catholic kingdoms on the Iberian Peninsula, thus paving the way for the creation of the nation-state of Spain. The final stages of the *Reconquista*—the expulsion of the Moors (North African Muslims who had occupied Iberia since the eighth century)—commences with their marriage.

1481

Queen Isabella rejects a request from a Genoese sailor, Christopher Columbus, to sponsor his expedition aimed at reaching the East Indies. His plan is to sail westward across the Atlantic, instead of along the route currently being explored by the Portuguese, which goes eastward and southward around the Horn of Africa.

1483

With the Crown's explicit approval, the Inquisition begins operation in Spain. The primary targets of this strenuous (and often violent) enforcement of rigid Catholic orthodoxy are the *conversos*—Jews who have only recently converted to Catholicism and are therefore suspected of disloyal tendencies in the militaristic and xenophobic environment of the *Reconquista*.

1491

Christopher Columbus, unsuccessful in his bids to acquire sponsorship for his voyages from other European governments, once again applies to Isabella for funds. This time, with the *Reconquista* nearly complete and Spain positioned to enter into maritime competition with Portugal, the queen grants his request, providing three ships and royal sanction for his planned voyage.

1492

The *Reconquista* reaches its conclusion in January, when the last remaining Moorish enclave in Granada (on the southern coast of Spain) is defeated. Spain is completely reclaimed by Catholics.

A royal decree expels those of Jewish extraction from Spain. Many go underground, and some migrate to Spanish colonies in the Western Hemisphere.

In August, Christopher Columbus begins his voyage across the Atlantic. On October 12, he reaches land at what is now Watling's Island in the Bahamas. Columbus is convinced that he is near the Asian coast, as he has significantly underestimated the earth's circumference in his calculations. He names the island San Salvador and claims it in the name of God and the Spanish Crown. Kidnapping some of the Taino natives he encounters, as well as taking flora and fauna samples from his explorations in the immediate region around the Bahamas (including Hispaniola, meaning "Spanish Isle"), Columbus and his crew sail for Europe.

1493

Christopher Columbus arrives in Portugal in March. Ferdinand and Isabella reward Columbus by naming him Admiral of the Ocean Sea and governor of the islands he has “discovered.” They grant him a share in all the wealth he might find in the region.

Columbus organizes a larger expedition to return to Hispaniola. He establishes a permanent Spanish colony there, although relations quickly deteriorate between the Spanish soldiers and the Taino natives. Columbus returns to Spain, leaving an interim governor in his place.

The problems between the Spanish and natives continue, but diseases introduced by the Spanish are already taking their toll on the native population. Where the population in early 1492 was estimated to have been over 5 million, by 1540, only a few thousand Taino will remain on Hispaniola. Adding to the natives' troubles will be the *encomienda*, a grant from the Crown of land and native labor that will first be made to Columbus in 1499. Over time, this practice will become prevalent in the Spanish colonial empire and will be the source of much misery and hardship for natives, who will become essentially enslaved by Spanish *encomenderos*.

Columbus will make two more voyages to the New World, still believing he is near Asia. Doubts will creep in, however, as he sails around the Caribbean and Gulf of Mexico without finding a break in what he thinks is a chain of barrier islands off the Asian coast. Columbus will die in 1506, embittered at having failed in his ultimate objective.

The pope grants Spain the right to conquer all non-Christian peoples and lands more than 100 leagues west of the Azores. This dispensation reinforces Spain's role as the leading Catholic nation in Europe, and it is also a large part of Spain's rationale for its overseas colonial conquests.

1494

To reconcile their separate papal dispensations, Spain and Portugal conclude the Treaty of Tordesillas. This moves the line of demarcation to 350 leagues west of the Azores and grants Portugal the right of conquest in all non-Christian lands east of that line.

1513

Don Juan Ponce de León leads a Spanish expedition to the east coast of “La Florida,” seeking gold and slaves. He also searches for a mythical fountain of youth, whose existence has been hinted at in encounters with other native groups in the Caribbean region.

The expedition is met by the hostile Ais, who drive away the Spaniards. The ships sail around the Florida Keys and up Florida's west coast, where the Spaniards encounter the equally hostile Caloosa. Faced with the hostility of the native peoples, Ponce de León temporarily abandons his quest for wealth in Florida.

1519

Hernando Cortéz and approximately 1,000 Spanish soldiers land on the east coast of Mexico. They begin an expedition into the heart of the Aztec Empire, subduing the native societies they encounter along the way through either intimidation or force. Cortéz and his men reach the Aztec capital of Tenochtitlán within several months, where they are cautiously welcomed by the Aztec emperor Montezuma II. Cortéz's intent, however, is not diplomacy but conquest.

1521

In May, Cortéz completes the conquest of the Aztec Empire when the Spanish (along with native allies, who also desire an end to Aztec rule) defeat the Aztec in a climactic battle in Tenochtitlán. The Spanish conquistadores will become *encomenderos*, and the Aztec will suffer significant depopulation, not only from the violence of conquest, but also from the diseases brought by the Spanish. Mexico becomes the center of the viceroyalty of New Spain, which becomes the base for further Spanish expansion and colonization in the area that is today the United States.

Ponce de León returns to Florida with the intention of constructing a fort to serve as a base for expeditions into the Florida interior. Once again, the Caloosa attack the expedition, seriously wounding Ponce de León in the process; he dies a few days later in Cuba.

1527–1528

Panfilo Narváez, who earlier had conquered Cuba, receives royal permission to claim the lands previously explored by Ponce de León. He launches an expedition to West Florida, but four of its five ships are either destroyed by storm or are forced to turn back to Cuba. Undaunted, Narváez lands north of Caloosa territory, where he and his men encounter the Timucua. To avoid conflict with the encroaching Spanish, the Timucua direct Narváez and his men northward into Apalachee lands.

The Apalachee are a more populous and less dispersed and nomadic society than either the Caloosa or Timucua, and thus their hostile stance towards the Spanish proves far more deadly. The Apalachee destroy the expedition, and Narváez himself is killed along with some 300 of his men. Four Spaniards survive, including the expedition's treasurer, Cabeza de Vaca, and an African slave named Esteban.

For the next eight years, the four men will wander throughout the regions of the Gulf of Mexico's coast—through Louisiana, Texas, and finally into northern Mexico. Eventually, de Vaca and Esteban will become separated from the other two Spaniards. Cabeza de Vaca will publish a narrative of the journey, detailing his encounters with various tribes, from nomads to cannibals, and the roles, from slaves to holy men, that he and Esteban played in order to survive. Despite de Vaca's grim descriptions of the regions and peoples of the “borderlands,” other conquistadores will continue to launch expeditions into these regions in subsequent decades.

1539

Hernando de Soto leads an expedition of approximately 600 Spanish soldiers to western Florida in search of land, slaves, and riches. For the next three years, de Soto will travel throughout what is now the southeastern United States. In the process, he will become the first European to reach the Mississippi River.

De Soto's expedition lays waste to the Native Americans of the region. Diseases brought by the Spaniards decimate the area's various populations, who tend to interact with one another commercially and politically and thus help to spread the deadly microbes at an accelerated rate. Additionally, de Soto, who has a significant capacity for violence, deals harshly with any natives who exhibit hostility or resistance towards the Spanish. Eventually, however, de Soto's forces are attacked and split in two.

Although he could meet a Spanish naval force on the Gulf coast, de Soto, still enthralled by visions of a fabled city of gold, instead turns northwards to continue his search. He will fall ill by early 1542 and die in May at the Mississippi River. The bedraggled remnants of his force will journey southward and reach the comparative safety of Spanish settlements approximately a year later.

1540–1542

Francisco Vázquez de Coronado commands an expedition journeying throughout what is now the southwestern United States (concurrently with de Soto's movements through the southeast). For approximately two years, Coronado and his men search for one of the fabled seven cities of gold. Journeying throughout the region—from the Grand Canyon and lower California in the west to Kansas and the Great Plains in the east—Coronado and his men generally enjoy good relations with the native peoples they encounter; some natives even accompany the Spanish as fellow warriors and guides.

This changes, however, when Coronado arrives at the Hawikuh pueblo, a group of villages north of the Zuni River. Seeking to feed his men, Coronado offers the Pueblo peoples the protection of the Spanish Crown in exchange for food. The natives respond by attacking Coronado; his force counterattacks. The Pueblo retreat to another, more fortified, village, but Coronado's force has essentially worn out its welcome in the area. Faced with hostile native populations and mutinous and hungry troops, Coronado resorts to attacking any natives who refuse to cooperate with the Spanish.

By the end of 1541, Coronado retreats southward to Mexico in April 1542, leaving in his wake many Native Americans killed by either violence or disease. There are other long-term effects of this European contact: Spanish horses, sheep, and cows will remain in Pueblo country and alter both the diets and wardrobes of the region's native peoples.

1565

An expedition of French Huguenots constructs Fort Caroline at the mouth of the St. John's River in Florida, a cause for serious concern among the Catholic Spanish authorities toward what they regard as a dangerous encroachment into their lands. In September, Pedro Menéndez de Avilés leads a force of some 500 Spanish soldiers to dislodge the French. The Spanish completely surprise the French community at Fort Caroline and kill most residents; most of those who surrender also are executed, as Menéndez deems this a justifiable punishment for Protestant "heretics" who refuse to convert to Catholicism.

Forty miles south of the Fort Caroline site, Menéndez constructs the fortress town of St. Augustine. It is the first permanent European colonial settlement in the area that will become the United States.

Menéndez will go on to construct a network of coastal fortifications along both the Gulf and Atlantic coasts to prevent both future French encroachment and European privateers' preying upon Spanish vessels. The principal settlement in this network is Saint Helena, on Port Royal Sound (in what is now South Carolina).

1570–1572

Pedro Menéndez de Avilés sends a Jesuit mission north to the Chesapeake Bay. The mission, however, becomes a tragic failure within a year. The Jesuits' guide is a native who had been captured by Spanish soldiers in 1561, taken to Spain, and baptized. Seemingly assimilated into European culture, the young man promises to help the Jesuits convert the peoples of his native region. Once in the Chesapeake, however, the guide deserts the Jesuits and exhorts the region's natives to resist the Spaniards.

In February 1571, a force of Native Americans surprises and massacres the Jesuits, leaving only one survivor—a child taken into captivity. Menéndez leads a retaliatory expedition to the Chesapeake in 1572; although he kills some thirty-five Native Americans, he cannot find the erstwhile guide who has undone the Jesuit mission. After this incursion, the Spanish will withdraw from the Chesapeake region.

1573

A new decree from the Spanish Crown, the Royal Orders for New Discoveries, mandates that future expeditions launched by conquistadores will be "pacifications" rather than "conquests" of the Native Americans. The Crown instructs conquistadores to proceed "peacefully and charitably" toward the native peoples. In their practical effect, the orders do not substantially alter the *modus operandi* of Spanish expeditions into North America.

1574

Menéndez dies in Florida. The erosion of Spanish settlement in the face of difficult conditions and hostile natives is strikingly evident at this point, with St. Augustine and Santa Elena the only remaining Spanish outposts in Florida.

1588

Decades of tension between England and Spain climax with an attempt by Spain's King Philip II to launch an invasion of England with a huge naval armada, consisting of 130 ships and over 22,000 soldiers and sailors. The confrontation between the Spanish Armada and the English navy begins on

July 30; for two weeks, the opposing fleets engage one another, until the Spanish are forced to withdraw. As the Armada sails around Ireland and Scotland before heading back to Iberian waters, several storms decimate the fleet, and only a small crippled remnant makes it back to Spain.

The defeat and decimation of the Spanish Armada mark the beginning of a long, slow decline in Spain's imperial power vis-à-vis its principal European rivals, England and the Netherlands. From this point forward, Spain's dominance on the oceans and in the Americas will no longer stand uncontested. Other European nations will begin to create significant colonial dominions of their own alongside those of the Spanish in the Western Hemisphere.

1598–1607

Don Juan de Oñate is appointed by the viceroy of New Spain to lead a “pacification” expedition to the valley of the Rio Grande River and to found a Spanish colony (to be named New Mexico). The initial settlement in this venture, which includes some 130 Spanish troops and a handful of Franciscan friars, is founded in the midst of the Pueblo.

By 1599, Oñate and the Spanish manage to antagonize their Pueblo neighbors—mostly due to the Spanish soldiers' habit of taking whatever they need in the way of food or clothing by force from the Pueblo. When natives kill a few Spaniards engaged in this plundering in 1599, Oñate decides to make an example of them. Attacking one of the Pueblo villages, Oñate and the Spaniards kill several hundred Pueblo men, women, and children, and they enslave the survivors.

The Spaniards' ultimate goal—discovering rumored silver mines in the region—is never achieved, despite Oñate's willingness to launch more and more widespread expeditions into the North American interior (one even retraces the earlier route of Coronado). By 1602, many of the Spanish settlers, who had come with Oñate, are tired of arduous conditions without the promised returns, and they go back to Mexico. Faced with what is essentially a mutiny on the northern frontier, the viceroy recalls Oñate in 1607, strips him of his titles and honors, and orders him to keep away from New Mexico in the future.

1609

Under orders from the viceroy, Oñate's replacement as governor of “New Mexico,” Don Pedro de Peralta, relocates the principal Spanish settlement in the region to the newly founded mission town of Santa Fe. The colony is to be rededicated to the ideal of pacification rather than conquest, with strict limits placed upon the conduct of the soldiers and civilian authorities; expanded powers are bestowed upon the Franciscans as well. The New Mexico colony, however, will never become more than an isolated backwater, far away from the main centers of Spanish colonization in the Americas—an enclave of a European minority in the midst of a large Pueblo majority.

1659

Approximately 10,000 of the native peoples housed in or near Spanish frontier missions die from a measles epidemic.

1680

A large, coordinated Pueblo revolt occurs in New Mexico. The uprising is a product of both short- and long-term causes, both revolving around decades of a Spanish presence. Diseases brought by the Spaniards have ravaged the Pueblo population, and harsh weather over the last several years has produced poor harvests and famine conditions throughout the region. These factors, combined with the aggressive methods with which the Spanish missionaries seek to acculturate the Pueblo, including beatings and executions of “heretic” Pueblo shamans, in an effort to enforce Christian practices, produce significant unrest. Some 17,000 to 18,000 Pueblos rise up in August in an attempt to force the Spanish out of New Mexico. They succeed in killing a number of the Spanish colonists and chasing the survivors as far as El Paso, farther eastward along the Rio Grande. The Pueblo insurgents take special pains to destroy any vestiges of Spanish culture, including churches, statues, and missions.

1687

Jesuit missionary Eusebio Francisco Kino establishes a mission in Baja California. From this base of operations, Kino extends missionary activity farther north, into what is now Arizona, as far as the Gila and Colorado rivers. Over the next twelve years, Kino will establish a significant Jesuit presence in the area.

1692

The remnant of Spain's New Mexico colonists, along with additional reinforcements from Spanish Mexico, reenter New Mexico in an attempt to reestablish Spanish hegemony in the region. The most significant fighting occurs at Santa Fe. Once the Pueblo are defeated there, Spanish control over the region is, for all intents and purposes, reestablished.

1696

Another revolt by the Pueblo of New Mexico against Spanish authority breaks out. Unlike the great rebellion of 1680, this insurgency is quickly suppressed by the governor, Diego de Vargas. But Vargas and the Spanish are unable to pacify the Hopi and Zuni peoples to the west, and these areas will become a refuge for Pueblo insurgents for the next several generations. This rebellion will prove to be the last organized uprising on the part of the Pueblo against Spanish authority.

1718

In the same year that the French establish New Orleans along the coast of the Gulf of Mexico, the Spanish move their range of northern settlements farther east to meet this perceived incursion. Indeed, the French have reached the Gulf of Mexico by cleaving the eastern half of Spanish settlement (Florida) from the western half (New Mexico and Texas). The settlement of San Antonio de Bexar and its mission, the Alamo, are founded in an attempt to

redress what has been relative inattention to these northern regions. Additional Spanish expeditions range even farther northward, reaching present-day North Platte, Nebraska.

Although the French will not be dislodged from the North American interior until the 1760s, Spanish settlements in Texas reflect a gradual awareness on the part of the Spanish colonial bureaucracy that there is a French threat that needs to be met. For the next few decades, however, the northern regions of Spanish colonization remain distinctly secondary priorities to both the colonial authorities and the royal ministry back in Spain, and they are essentially regarded as lightly settled backwaters.

1763

The Spanish settlements in North America are reordered and expanded as a result of Spain's alliance with victorious Britain during the Seven Years' War (known in North America as the French and Indian War). The 1763 Treaty of Paris awards much of France's North American dominions to Spain, including the Mississippi River Valley, later known as the Louisiana Territory. The French division of Spain's northern settlements is therefore alleviated, as is the possibility of further encroachment by the French into lands nominally claimed by the Spanish. Spain, however, loses territory as well, with the cession of Florida to the British by the terms of the treaty.

1769

Jesuit missionary Junípero Serra leads an expedition into California, the last North American region to be settled by the Spanish. He establishes a mission and settlement at San Diego Bay. The year 1769 is regarded as the beginning of the "mission period" in California history, as from this point through the 1820s, a network of over twenty Spanish missions is created, stretching from San Diego to what is now northern California. Missions that will be founded in this period include San Francisco, Santa Barbara, and San José.

1783

The Treaty of Paris ends the Revolutionary War between Britain and its North American colonies. Spain had allied with France and the fledgling United States, and its reward for this support is winning back Florida from Great Britain as part of the settlement.

1810

While the Spanish monarchy undergoes internal conflict and eventual abdication as a result of the Napoleonic Wars in Europe, Spain's American colonies begin to take advantage of the power vacuum created by these dislocations in the homeland. The first of Spain's colonies to rebel against the authority of the mother country is Mexico. In September, an uprising breaks out in northern Mexico, led by the Creole priest Father Miguel Hidalgo. Hidalgo's insurgency has significant nationalist and peasant overtones, as it is led by the banner of the Virgin of Guadalupe, an indigenous and mestizo (people of mixed Spanish and native blood) symbol.

While Hidalgo's uprising will be quelled within two years, and Hidalgo himself will be captured and executed, the rebellion proves to be the beginning of over ten years of warfare. This violent period of revolution and upheaval will culminate in 1821 in the independent state of Mexico, which will include northern settlements in New Mexico, Texas, and California.

1819

In the Adams-Onís Treaty, Spain cedes Florida to the United States, in return for the U.S. government's assumption of 5 million dollars in American claims against the Spanish. The cession is perhaps the inevitable result of Spain's dramatically declining power in Florida, mirroring its loosening hold upon all its colonies during this era of Latin American revolutions.

The immediate occasion for the United States' interest in Florida emerges from General Andrew Jackson's incursion into Spanish territory early in the year. Jackson had been charged with pacifying the Seminole, who had been attacking American settlements in Georgia and Alabama. He interprets his orders broadly, choosing to strike at what he sees as the source of the Seminoles' strength—Spanish authorities in Pensacola. Entering Florida, Jackson forces the Spanish governor to lower the Spanish colors at Pensacola and executes two Britons he suspects of arming the Seminoles, thus causing an international incident. Despite Spain's protests against this violation of its sovereignty, U.S. Secretary of State John Quincy Adams realizes Jackson's expedition only underscores the weakness of Spanish authority in Florida, and he leverages this into what turns out to be a favorable treaty for the United States, which had desired the acquisition of Florida for years.

1821

Mexican forces defeat the last of Spain's Royal Army troops, completing the complex and violent process by which Mexico gains its independence from Spain. At first, Mexico is governed as an empire by the self-styled "emperor" Agustín de Iturbide. By 1824, however, Iturbide is deposed, and Mexico has become a constitutional republic.

The defined borders of Mexico include the regions of New Mexico, Arizona, Texas, and Alta California (the modern-day California in the United States)—the northern frontier of Spanish colonization in earlier years. These northern regions remain lightly settled by Mexicans and will become a target of U.S. expansionism by the 1830s.

Virginia

Prior to the Arrival of Europeans

In the latter part of the sixteenth century, the chieftain Powhatan, who has inherited several villages between the James and Mattaponi Rivers through his mother's line, expands Tsenacommacah (which might have meant "densely inhabited land") through intimidation, diplomacy, and conquest to include most of the eastern half of what the English will later call Virginia.

Most of the tribes in this area share a language (of the eastern Algonquian type) and culture, but Powhatan's chiefdom is not a monolithic cultural entity. Each village maintains a *werowance*, a vassal chief, who rules with Powhatan's approval. In fact, Powhatan often appoints one of his numerous relations to the position.

There has been some disagreement by historians over the nature of Powhatan's authority. While he probably never held the same type or amount of power as paramount chiefs farther to the southeast, his chiefdom was more centralized than other eastern Algonquian polities. Powhatan ruled with the assistance of a wide-ranging network of chiefs and priests. Virginia is considered a Southern colony because of the sort of Anglo-American society that grew up there; however, in terms of Native American culture, it had more in common with that of New England.

The population of the eastern portion of Virginia around the turn of the seventeenth century possibly numbers around 20,000—perhaps over 100,000 for the entire future state, and Powhatan's authority extends over about thirty smaller chiefdoms. Each of these lesser chiefdoms consists of a network of villages. Life at the village level is divided along lines of gender. Men hunt, fish, and conduct war and diplomacy, while women farm, forage for food, and perform most of the domestic work.

1560–1570

The Spanish sail into Chesapeake Bay to explore, and Don Luis de Velasco, a young Powhatan chief, returns with them to Mexico. Don Luis lives in Mexico and Havana, and in between his journeys he studies at the court of King Philip II in Spain. The Spanish return in 1570 and establish a short-lived mission on Chesapeake Bay. Velasco, who has converted to Catholicism, draws the missionaries' ire by taking several wives and moving away from the mission. When the priests attempt to coax him back to the mission, he kills all but one of them, though he does give the victims Christian burials.

1572

A Spanish supply ship engages some Powhatan Indians and makes off with about thirty captives. The soldiers pick up the survivor of the mission but fail in their attempt to capture Velasco. Both Powhatan and Opechancanough, cousins and future paramount chiefs, are old enough to witness or participate in the killings. This has led some scholars to conclude that all three were related, and some to speculate that Velasco was either Powhatan or Opechancanough.

1584

An expedition funded by Walter Raleigh reaches the Outer Banks of present-day North Carolina. Walter Raleigh names the country Virginia in honor of Elizabeth I, the "Virgin Queen," and in return he is knighted.

1585

Raleigh sends another group of adventurers to Roanoke. The group returns home the following spring with Francis Drake, though the work of John White and Thomas Harriot will continue to increase English interest in the region.

1587

Raleigh sends out another larger group of adventurers, this time intending to stay, under the leadership of John White. White, however, returns with the ship. Hostilities with Spain (including the famous 1588 naval battle) prevent a supply ship from reaching the colony for four years. By the time White returns, the settlement has been abandoned, and the word "Croatoan" has been scratched into a stockade post. The fate of the colonists is unclear. They may have been killed by local natives or assimilated into a native community, only to be destroyed when Powhatan conquered the region in the first decade of the seventeenth century.

1606

Sir Ferdinando Gorges, Sir John Popham, and Richard Hakluyt, among others, convince King James I to charter the Virginia Company, whose branches, the Plymouth Company and the London Company, will be responsible for establishing colonies in Massachusetts and Virginia respectively. The London Company is made up of merchants, lawyers, and other well-to-do men and is designed as a joint-stock company.

1607

Around 100 men and boys arrive in Virginia on the *Susan Constant* and establish Jamestown, named after the monarch. Company officials instruct the colonists not to let Native Americans see them die, thinking the natives perceive the English to be immortal.

Professional soldier John Smith, later appointed leader of the colony, is captured in December 1607. He is shown about Powhatan's territory and finally meets the paramount chief. Through a series of rituals, Powhatan accepts Smith's, and the English, presence in Tsenacommacah, perhaps sensing they will make allies in his effort to subdue the Monacan. In the last of these rituals, Smith is symbolically rescued from death by Pocahontas, Powhatan's young daughter.

From 1607 to 1622, the Virginia Company transports 10,000 people to Virginia, and only about 20 percent of these manage to stay alive. Of the first 100 colonists, fewer than 40 survive their first winter; in the winter of 1609–1610, 160 of the 220 colonists perish. The Jamestown colonists die (of malaria and other diseases, salt poisoning, and starvation) because of their colony's poor location on a stagnant swamp. One woman is killed by her starving husband and subsequently eaten. To compound all of these tragedies, many of the colonists refuse to plant crops or work, insisting on searching for gold instead. John Smith does eventually force the colonists to plant food, but he returns to England in 1609.

1610

Thomas West, Lord De La Warr, takes charge of the Jamestown colony and forces colonists to work, assigning each one a specific task with a work schedule.

1611

Sir Thomas Gates and Sir Thomas Dale are appointed to lead Jamestown, and Dale, drawing on both civil and military law, establishes a code of laws that will become the "Lawes Divine, Morall, and Martiall." Though Virginia colonists die at a slightly slower pace, the company continues to lose money.

1613

Tension between the Powhatan people and the English subsides after Samuel Argall takes Pocahontas hostage.

1614

John Rolfe produces four experimental barrels of tobacco for export to London. Fashionable English people have developed a taste for the plant, and Rolfe uses a West Indian variety, *Nicotiana tabacum*, in favor of the more bitter native plant. King James I denounces tobacco as unhealthy and disgusting, but his warnings have little effect. By 1617, Virginia planters are shipping around 50,000 pounds of tobacco annually, and the tobacco explosion is just getting started. In 1624, Virginia exports 200,000 pounds, and by 1638, this figure is 3 million. Tobacco begins to operate as currency in colonial Virginia—it can purchase goods and services, pay debts, and provide salaries for colonial officials.

Pocahontas and John Rolfe wed, and tensions between the English and Powhatan peoples, who have been fighting almost continuously, ease yet further. Pocahontas returns to England with Rolfe. Taking the name Rebecca and accepting baptism, she becomes the talk of the town in London; she dies there in 1617.

1617

In an effort to attract more colonists, the Virginia Company institutes a "headright" system, which assures 50 acres of land to any man able to pay his own way to the colony, and 50 additional acres for each dependent he brings with him.

1618

The Virginia Company undertakes a large-scale recovery effort. The colony has yet to make its investors any money, and the company is near bankruptcy. Edwin Sandys becomes treasurer and promptly replaces the earlier military laws with ones more closely reflective of English common law. He also attracts new settlers, including more women, to Virginia.

Powhatan dies, and his chieftom passes to his brother or cousin Opechancanough. The new chief is less willing to accommodate English expansion than his predecessor, especially since English settlements are expanding rapidly beyond the territory originally granted them by Powhatan.

1619

Governor Yeardley, a Sandys appointee, convenes an assembly at Jamestown. Yeardley meets with his six appointed councilors, and twenty elected representatives known as burgesses. The House of Burgesses, the first elected representative body in English America, will continue to meet until 1775.

A Dutch captain trading in Jamestown sells "twenty Negars" to Virginia planters. The legal status of the first Africans in Virginia is not precisely clear. In the first half of the seventeenth century, chattel slavery is not the only labor option. Some Africans work toward their freedom, and a few—most notably Anthony Johnson—even own their own tobacco plantations. This will become increasingly rare as slavery takes root during the second half of the seventeenth century and Virginia society begins to divide along strict racial lines.

Among the first acts of the General Assembly is a provision delineating the status of indentured servants. Not surprisingly, colonial laws perceive indentured servitude as a harsher form of apprenticeship and usually favor the master, although servants do have access to courts. Most indentures last from four to seven years, and indentured servants can be bought, sold, and willed like other forms of property.

1622

In what Anglo-Virginians will call the "Great Massacre," Opechancanough leads a furious assault on settlements that he feels have extended too far up the James River. To prove a point, some of the Powhatan use the farmers' own tools to kill them. Some scholars view this as an attempt to rid Virginia of

the English altogether, but the intention was probably to keep English settlements within reasonable boundaries.

The attack has devastating consequences for the English colonists, 347 of whom—about one-third of the population—die in the attack. The colonists launch a series of counterattacks to open up new lands to English settlement, severely weakening their native neighbors, including groups who had nothing to do with the attack.

The Virginia Company leadership is devastated by news of the attack and never fully recovers from the shock. James I initiates *quo warranto* ("by what authority") proceedings, which will force the company to prove it should be allowed to continue operations. James I's untimely death in 1625 brings King Charles I to the throne; shortly thereafter, he declares Virginia to be a royal colony and removes the Virginia Company from control.

1634

Virginia organizes into counties, which become the main political units of the colony. County-level courts handle civil matters, and their decisions can be appealed to the General Assembly. Each county receives some appointed officials, including justices of the peace, sheriffs, clerks, and deputies.

1639

King Charles I secures the uncertain future of the Virginia general assembly when he authorizes it to continue. The assembly had been meeting regularly under his appointed governor, but with no official legal sanction since the Virginia Company's removal from power.

1644–1646

In another effort to punish English encroachment, Opechancanough, now around 100 years old, orders an attack on English settlements. The English respond quickly and capture the old warrior. To increase his own prestige, Governor William Berkeley intends to send Opechancanough to England, but is unable to do so, as one of the men guarding the prisoner shoots the chief in the back.

In 1646, treaty negotiations take place that give most of Tsenacommacah over to the English. The Powhatan people, now led by Necotowance, accept the sovereignty of the English king. They do not, however, give up their own sovereignty in the reservations that the treaty provides for them.

1651

England's civil war reaches Virginia when Governor Berkeley, a staunch supporter of the Stuarts, refuses to meet with a Puritan commission sent by the Commonwealth government. The commission threatens to attack the capital, and Berkeley backs down. Oliver Cromwell's Puritan regime has relatively little effect on the government and everyday life in Virginia.

1662

The General Assembly begins to define the legal status of Virginia's African slaves, who are steadily growing in number—though nothing like the population explosion of the eighteenth century.

1675–1676

Nathaniel Bacon leads a revolt against Berkeley's government. Bacon—incidentally, a second cousin of Berkeley—is an extraordinarily wealthy recent arrival in the Chesapeake. His plantations and those of his neighbors, near present-day Richmond, are the scene of hostilities between planters and a group of Doeg Indians, pressured by the expansion of English plantations. Bacon and his followers are upset by what they perceive to be Berkeley's lax Indian policies, which they believe favor his friends in the fur trade and do not provide enough money for defense.

Bacon and his followers retaliate against the Doeg—who are responding to a corrupt deal with a local planter—but they also kill fourteen Susquehannocks, a linguistically Iroquoian people who had been at peace with the Virginia colony for decades. The Susquehannock attack Virginia in the winter of 1675–1676, and kill thirty-six colonists. Western Virginians in turn attack some reservations of the Appomattox and Pamunkeys. Nathaniel Bacon rises to the fore of a movement that calls for the destruction of the region's native peoples. Berkeley refuses Bacon a commission for this purpose, but Bacon goes ahead anyway.

Following a series of attacks on Native Americans, Bacon turns his army toward Jamestown and captures the capital in September 1676, sending Berkeley to the Eastern shore, where he awaits the arrival of royal troops. Bacon dies of dysentery in October and his rebellion collapses shortly thereafter. The effects on Virginia society are much longer lasting. Virginia comes to be dominated by a class of great planters who are more responsive than their predecessors to those they govern. Racial solidarity becomes the order of the day, and the tributary Native Americans suffer a crushing defeat.

1677–1680s

The royal commission sent to smash Bacon's Rebellion runs into trouble with Berkeley and his cronies, who refuse to give up their government or pardon lesser rebels, as King Charles II has instructed. The new military commander, Sir Herbert Jeffreys, makes a mess of Virginia's government. His immediate successors—Culpeper and Lord Effingham, both of whom clash with the great planters—fare no better. All of these administrations are marred by legislative wrangling. By the close of the 1680s, Virginia's planter class grudgingly accepts its subservient position to England, whose hand has become increasingly strong in colonial affairs.

The issue of founding towns comes up repeatedly. The Crown prefers that Virginia settle at least one town on every river. Trade could then flow through these set points, thus making the Navigation Acts easier to enforce. Some Virginians advocate the founding of towns, since they believe the presence of towns will encourage manufacturing in the colony. In fact, the steady rise of a plantation society with its attendant risks and profits retards the development of any seriously concentrated settlements, in marked contrast to the Massachusetts Bay Colony farther to the north.

1690

Francis Nicholson serves as deputy governor from 1690 to 1692. He works closely with the leading men in Virginia and uses his military experience to reorganize the colony's defenses.

1691

The assembly, the first after the Glorious Revolution that put William and Mary on the throne, convenes and sends Reverend James Blair to England to secure a charter for a college. Blair spends more than a year in England garnering support and donations for the college. Funds are also raised in Virginia; in 1693, the College of William and Mary receives its royal charter. Construction begins on a building in 1695, and the search for a faculty starts in 1700.

1693

Edmund Andros, who had been imprisoned in Massachusetts at the end of the Dominion period, is transferred by King William III to govern Virginia. He eventually comes into conflict with James Blair and other council members and burgesses. He sends money to aid in the defense of New York and ends up dissolving the legislature on two separate occasions. Andros and Blair butt heads repeatedly, and Blair is removed from the council and reinstated intermittently.

1696

A new committee, the Lords Commissioners of Trade and Plantations, known as the Board of Trade, meets in London to oversee colonial affairs. Notable members include William Blathwayt and John Locke. The Board of Trade finds that Andros has badly mismanaged Virginia and abused his power. Francis Nicholson, a friend of James Blair, is tapped to replace Andros.

1697

The tobacco market, which has slowed during King William's War, strengthens during the period before Queen Anne's War. Three thousand African slaves come to Virginia during this five-year span, and more than a million acres of land are sold.

1698

The Crown cancels the monopoly the Royal African Company has held on the importation of slaves into British colonies. The Royal African Company focuses most of its efforts on transporting African slaves to the sugar-rich West Indies, but the decision officially opens up the Atlantic slave trade with Virginia to private enterprise. By the close of the seventeenth century, Africans comprise around 10,000 of Virginia's total population of roughly 75,000. Most of these slaves labor on tobacco plantations on the Northern Neck and the land between the James and York Rivers.

1699

Francis Nicholson adjourns the General Assembly to Middle Plantation, where construction has already begun on the College of William and Mary. Nicholson intends to design a new capital for Virginia, as he had previously in Annapolis during his stay in Maryland. Williamsburg is to be the beneficiary of the latest Enlightenment urban design, in which radial streets converge at the capitol, the church, and the college.

Nicholson is charged with implementing reforms demanded by the Board of Trade. Chief among these concerns are the increasing size of individual plantations in place of a farming middle class and the holding of multiple offices by individuals. Nicholson tries to end the headright bonanza for large slave owners but is thwarted by the council, and the Board of Trade eventually rescinds the order. Nicholson does succeed in increasing royal revenues from Virginia.

1702

Queen Anne's War—the War of the Spanish Succession in Europe—breaks out between ancient adversaries England and France, and Virginia is required to send 240 men and money to New York. The burgesses refuse to do so. Nicholson is gradually losing control over the planter class that has previously supported him.

1703

Six council members, including James Blair, petition Queen Anne to remove Nicholson. The ensuing conflict pits Nicholson, the burgesses, the clerical community, and some militia companies against Blair and the council. In 1705, Nicholson is transferred to Nova Scotia; he will also serve in South Carolina later in his career. The new governor—technically a lieutenant governor—is Edward Nott, who allows the council to run things and dies after just a year in office.

1705

Robert Beverley publishes *The History and Present State of Virginia, in Four Parts* (revised and republished in 1722). He criticizes Virginians for not establishing towns for industry and commerce, and relying on Great Britain for manufactured goods. He also describes the development of the institution of plantation slavery, which he compares favorably to the lives of white laborers in England and the colonies.

1710

Alexander Spotswood becomes lieutenant governor, and reinstates the House of Burgesses, although he is displeased with the low quality of men that Virginians elect.

1712

Responding to a Tuscarora attack on colonists in North Carolina, Spotswood begins to negotiate with friendly native groups with the intention of forming a buffer against attack. Money for a military expedition gets tied up in a battle between the burgesses and the council.

1716

Sixty-three horsemen known as the Knights of the Golden Horseshoe mount an expedition across the Blue Ridge. Accompanying the rangers are native scouts, servants, and historians. The adventure serves as a public relations coup, signaling that the western portion of Virginia is available for Anglo-American settlement.

1717

Governor Spotswood makes great strides toward ending piracy by sending Robert Maynard on an expedition against Edward Teach, or "Blackbeard," who is operating off the North Carolina coast. Maynard and his men kill Teach and execute thirteen of the crewmen they capture.

1718

Elections reflect the rising power of the lower house of the legislature. Men who openly oppose the policies of the governor are elected, and many of the burgesses favor petitioning the king against Spotswood. He in turn succeeds in having some of his fiercest opposition removed from the council. Spotswood, who to this point has acted very much like a royal appointee, also begins to speculate on western lands like his planter subordinates.

1720

Construction is finally completed on Governor Spotswood's palace, among the most sophisticated and elegant structures in British America. The great planters, not to be outdone by the governor's lavish residence, inaugurate a new golden age of great house construction along Virginia's rivers. Among these are William Byrd II's Westover, Robert Carter II's Nomini Hall, and Landon Carter's Sabine Hall.

From this time into the 1730s, Virginia planters begin to diversify their crops. Though tobacco will remain the most profitable export, more planters will turn to the production of cereal grains, which are not subject to the same violent price swings.

1721

Wary of upsetting the balance of power between native communities in and around Virginia, Governor Spotswood negotiates a treaty with the Iroquois. It stipulates that they will stay north of the Potomac and west of the Blue Ridge, provided that southern tribes honor the same line.

1730

Governor William Gooch proposes an act for the inspection of tobacco. The bill calls for the inspection of tobacco at public warehouses, the destruction of inferior tobacco, and generally standardizes the tobacco industry. After an intense struggle, the bill passes both houses of the legislature and receives royal support in 1731.

1732

Opponents of the Tobacco Act riot, destroying warehouses full of tobacco. The action moves many of the great planters, who detest such disorderly conduct, to support Gooch's plan. The Tobacco Act stands as an example of how a colony and the empire can both benefit from prudent economic policies. Things go smoothly as long as tobacco prices stay high, which they do from the 1730s to the 1750s.

The House of Burgesses invites William Parks to fulfill the newly created post of public printer. In 1736, Parks founds colonial Virginia's first newspaper, the *Virginia Gazette*.

1736

The town of Norfolk, home to many Scottish tobacco factors, is incorporated. Williamsburg and Jamestown are the only other incorporated towns in Virginia.

1740

About 400 Virginians, drawn from a wide range of colonial society, participate in the botched British attack on Cartagena during the War of the Austrian Succession. Governor Gooch is crippled for life by a cannonball, but many of his men are not so lucky. About half of the colonial force lose their lives to yellow fever and other diseases.

1747

The capitol building in Williamsburg burns. Some leading Virginians want to move the capital to more closely reflect the shifting population of Virginia, but

the building is rebuilt, and Williamsburg remains the capital for several more decades.

1748–1749

The Virginia Assembly undertakes a large-scale restructuring of the colony's laws. Several of these laws are disallowed by the Board of Trade, but word of the disallowance takes years to reach Virginia. Great Britain is taking new interest in colonial administration, but the process is slow and inefficient.

1749

The Ohio Company's huge land grant in the Ohio River Valley is confirmed by the Privy Council. Thomas Lee, acting as governor, declares that the area will be a boon to settlement and a way to block French aspirations.

1751

Robert Dinwiddie becomes governor and institutes a quitrent tax on the land claimed by speculators. Not surprisingly, his actions create an uproar in the House of Burgesses, which claims in 1754 that such a tax hinders settlement and violates the rights of landowners. The Privy Council in London determines that Dinwiddie has the right to impose a tax, but limits the effectiveness of the tax so as to render it negligible.

1754

The French and Indian War, the American theater of the worldwide Seven Years' War between France and Great Britain, begins in a dispute over the Ohio River Valley. Prominent members of the Ohio Company include Governor Dinwiddie, George Washington, Richard Henry Lee, and George Mason. The French move in the early 1750s to secure their claim to the region. Virginia responds by dispatching George Washington, who attacks a small group of French soldiers led by Joseph Coulon, Sieur de Jumonville, who dies in the attack. Washington proceeds to build Fort Necessity, which he later surrenders to a much larger French force.

1755

General Braddock lands at Alexandria with two regiments of British regulars. A combined force of British regulars and American militia, including George Washington, launches an ill-conceived attack on Fort Duquesne (near present-day Pittsburgh). The attack fails miserably, and with Braddock dead, Washington leads a quick retreat. In 1758, thanks largely to the leadership of Prime Minister William Pitt, the Elder, and Sir William Johnson's close ties to the Mohawk, the momentum shifts to the British.

1759

Parliament disallows two laws that permit Virginians to pay their clergymen in currency instead of tobacco. Parliament also issues a warning concerning the growing power of the General Assembly. This is a victory for the clergy, but a resulting court case, argued by Patrick Henry, awards damages of one penny. Henry uses the 1764 case against Reverend James Maury to argue against Parliament and the king as well as to advance his own political career.

1763

The Treaty of Paris ends the Seven Years' War, known as the French and Indian War in the colonies, which essentially removes France from North America. In the aftermath of the conflict, England faces a massive war debt, a postwar depression, and the challenge of defending and administering all of its new lands. One measure, the Proclamation of 1763, angers Virginia's elite, many of whom hold huge quantities of land over the mountains, in anticipation of a stream of white settlers.

1765

The British Parliament passes the Stamp Act, which requires a stamp—indicating that a tax has been paid—on legal documents, newspapers, pamphlets, and broadsides. The act ignites a firestorm of protest in the colonies. In Virginia, the reaction is somewhat more subdued. Petitions and letters are drafted by leading men and sent to British officials.

The mid-1760s are particularly lean years for Virginia's planter class, which finds itself in a downward spiral of debt and low tobacco prices. This probably contributes to that usually conservative group's adoption of radical, even revolutionary, ideas.

Led by Patrick Henry, among others, the assembly considers a series of Stamp Act resolves, which declare that the people of Virginia are not subject to taxes they do not approve in their colonial assembly, and that any person who upholds the authority of Parliament should be labeled an enemy of Virginia. The conservative leadership in the assembly does not support Henry's assertions, and Governor Fauquier dissolves the assembly. Local protests do emerge on the Northern Neck, with effigies of stamp distributors hanged and burned. The *Gazette* suspends operations rather than pay for stamps, and several courts open for business without the required stamps. The Stamp Act does go into effect in some parts of Virginia, but it will be repealed in 1766.

1766

British Parliament passes the Declaratory Act, a reminder to the colonies that it retains complete legislative authority over them.

Also, in a blow to the old-school politics of Virginia's elite, John Robinson, longtime Speaker of the House of Burgesses, dies. It is discovered that he had been using retired currency to loan to friends and political associates.

1767–1769

Charles Townshend, Chancellor of the Exchequer, proposes new duties to raise money. The Townshend Duties include taxes on paint, paper, and tea. Reaction to the duties in Virginia is more muted than during the Stamp Act crisis, but Virginia does sign on to the circular letter sent by Massachusetts. Virginia merchants agree not to import goods from Great Britain, and to favor goods produced in Virginia. There are relatively few British troops stationed in Virginia, and there are few aggressive British officials there, so the movement toward independence and revolution takes shape more slowly and along different lines than it does in Massachusetts, for instance.

1770

Under the leadership of Lord North, Parliament repeals all of the Townshend Duties, save for that on tea, which remains as a symbol of Parliament's right to tax the colonies in any manner it sees fit.

The inspector general for the American Board of Customs Commissioners arrives in Virginia and complains about the amount of tobacco exported illegally from the colony.

1771

The Earl of Dunmore, the new royal governor, arrives in Virginia, and immediately runs into trouble with the people of Virginia. His administration is further hampered by a deepening financial crisis, which causes some British merchants to attempt to collect on planter debt, which, in turn, pushes the planters toward a more revolutionary position.

1773

In the Tea Act, Parliament lowers the duty on tea, but colonists perceive this as another measure designed to interfere with their trade. Massachusetts is hardest hit by the Coercive Acts that follow, but Virginia and the other colonies pitch in to help Boston, which has its harbor shut down by the British.

1774

Meetings—sometimes referred to as committees of correspondence—occur throughout Virginia to determine an appropriate response to British actions in Boston. Several meetings decide they will shut down local courts to hurt the cases of British creditors. Many meetings also enter into more stringent nonimportation agreements. In the Continental Congress, Peyton Randolph and Richard Henry Lee argue for limiting the consumption of luxury goods, widespread nonimportation of British goods, and the formation of a Continental Association that would draw representatives from each of Britain's American colonies. Virginia's counties also begin to form independent militia companies.

1775

In a March convention, Patrick Henry, advocating the raising of regiments for Virginia, concludes a speech with the memorable phrase, "Give me liberty, or give me death!"

Lord Dunmore's proclamation offers freedom to any slaves who desert their masters and serve the British military. It is unclear how many slaves take advantage of this, but thousands of slaves will fight on each side during the War for Independence, despite the Continental army's often-ignored prohibition, and many will earn their freedom as a result.

Lord Dunmore also moves his government, along with some royal and loyalist forces, to Norfolk. As Virginia's governor, Patrick Henry stations his troops in Williamsburg. In December, the forces collide at Great Bridge, and the British are forced to withdraw to Norfolk's harbor. American forces ransack the loyalist town.

1776

Dunmore's forces evacuate Virginia for New York. On May 14, formal debate begins in Virginia regarding the colony's independence. The next day, a resolution passes that declares Virginia an independent state. Virginia, England's oldest colony, provides much of the leadership during and after the War for Independence. Richard Henry Lee, Peyton Randolph, George Washington, Thomas Jefferson, George Mason, and James Madison all contribute greatly to the American effort.

Columbus's Letter Announcing His Discoveries in the New World (1493)

Christopher Columbus transmitted his discoveries in the New World to Luis de Sant' Angel, the treasurer of Aragon. Sant' Angel was instrumental in securing the Spanish monarch's endorsement for Columbus's expedition, especially when it did not seem that support would be forthcoming. This letter

was written aboard the *Niña* during Columbus's return trip to Spain. It is the first official account of the voyage and was almost certainly shared with King Ferdinand and Queen Isabella.

SIR:

As I know you will be rejoiced at the glorious success that our Lord has given me in my voyage, I write this to tell you how in thirty-three days I sailed to the Indies with the fleet that the illustrious King and Queen, our Sovereigns, gave me, where I discovered a great many islands, inhabited by numberless people; and of all I have taken possession for their Highnesses by proclamation and display of the Royal Standard without opposition. To the first island I discovered I gave the name of San Salvador, in commemoration of His Divine Majesty, who has wonderfully granted all this. The Indians call it Guanaham. The second I named the Island of Santa Maria de Concepcion; the third, Fernandina; the fourth, Isabella; the fifth, Juana; and thus to each one I gave a new name. When I came to Juana, I followed the coast of that isle toward the west, and found it so extensive that I thought it might be the mainland, the province of Cathay; and as I found no towns nor villages on the sea-coast, except a few small settlements, where it was impossible to speak to the people, because they fled at once, I continued the said route, thinking I could not fail to see some great cities or towns; and finding at the end of many leagues that nothing new appeared, and that the coast led northward, contrary to my wish, because the winter had already set in, I decided to make for the south, and as the wind also was against my proceeding, I determined not to wait there longer, and turned back to a certain harbor whence I sent two men to find out whether there was any king or large city. They explored for three days, and found countless small communities and people, without number, but with no kind of government, so they returned.

I heard from other Indians I had already taken that this land was an island, and thus followed the eastern coast for one hundred and seven leagues, until I came to the end of it. From that point I saw another isle to the eastward, at eighteen leagues' distance, to which I gave the name of Hispaniola. I went thither and followed its northern coast to the east, as I had done in Juana, one hundred and seventy-eight leagues eastward, as in Juana. This island, like all the others, is most extensive. It has many ports along the sea-coast excelling any in Christendom—and many fine, large, flowing rivers. The land there is elevated, with many mountains and peaks incomparably higher than in the centre isle. They are most beautiful, of a thousand varied forms, accessible, and full of trees of endless varieties, so high that they seem to touch the sky, and I have been told that they never lose their foliage. I saw them as green and lovely as trees are in Spain in the month of May. Some of them were covered with blossoms, some with fruit, and some in other conditions, according to their kind. The nightingale and other small birds of a thousand kinds were singing in the month of November when I was there. There were palm trees of six or eight varieties, the graceful peculiarities of each one of them being worthy of admiration as are the other trees, fruits and grasses. There are wonderful pine woods, and very extensive ranges of meadow land. There is honey, and there are many kinds of birds, and a great variety of fruits. Inland there are numerous mines of metals and innumerable people. Hispaniola is a marvel. Its hills and mountains, fine plains and open country, are rich and fertile for planting and for pasturage, and for building towns and villages. The seaports there are incredibly fine, as also the magnificent rivers, most of which bear gold. The trees, fruits and grasses differ widely from those in Juana. There are many spices and vast mines of gold and other metals in this island. They have no iron, nor steel, nor weapons, nor are they fit for them, because although they are well-made men of commanding stature, they appear extraordinarily timid. The only arms they have are sticks of cane, cut when in seed, with a sharpened stick at the end, and they are afraid to use these. Often I have sent two or three men ashore to some town to converse with them, and the natives came out in great numbers, and as soon as they saw our men arrive, fled without a moment's delay although I protected them from all injury.

At every point where I landed, and succeeded in talking to them, I gave them some of everything I had—cloth and many other things—without receiving anything in return, but they are a hopelessly timid people. It is true that since they have gained more confidence and are losing this fear, they are so unsuspicious and so generous with what they possess, that no one who had not seen it would believe it. They never refuse anything that is asked for. They even offer it themselves, and show so much love that they would give their very hearts. Whether it be anything of great or small value, with any trifle of whatever kind, they are satisfied. I forbade worthless things being given to them, such as bits of broken bowls, pieces of glass, and old straps, although they were as much pleased to get them as if they were the finest jewels in the world. One sailor was found to have got for a leathern strap, gold of the weight of two and a half castellanos, and others for even more worthless things much more; while for a new blancas they would give all they had, were it two or three castellanos of pure gold or an arroba or two of spun cotton. Even bits of the broken hoops of wine casks they accepted, and gave in return what they had, like fools, and it seemed wrong to me. I forbade it, and gave a thousand good and pretty things that I had to win their love, and to induce them to become Christians, and to love and serve their Highness and the whole Castilian nation, and help to get for us things they have in abundance, which are necessary to us. They have no religion, nor idolatry, except that they all believe power and goodness to be in heaven. They firmly believed that I, with my ships and men, came from heaven, and with this idea I have been received everywhere, since they lost fear of me. They are, however, far from being ignorant. They are most ingenious men, and navigate these seas in a wonderful way, and describe everything well, but they never before saw people wearing clothes, nor vessels like ours. Directly I reached the Indies in the first isle I discovered, I took by force some of the natives, that from them we might gain some information of what there was in these parts; and so it was that we immediately understood each other, either by words or signs. They are still with me and still believe that I come from heaven. They were the first to declare this wherever I went, and the others ran from house to house, and to the towns around, crying out, "Come! come! and see the men from heaven!" Then all, both men and women, as soon as they were reassured about us, came, both small and great, all bringing something to eat and to drink, which they presented with marvellous kindness. In these isles there are a great many canoes, something like rowing boats, of all sizes, and most of them are larger than an eighteen-oared galley. They are not so broad, as they are made of a single plank, but a galley could not keep up with them in rowing, because they go with incredible speed, and with these they row about among all these islands, which are innumerable, and carry on their commerce. I have seen some of these canoes with seventy and eighty men in them, and each had an oar. In all the islands I observed little difference in the appearance of the people, or in their habits and language, except that they understand each other, which is remarkable. Therefore I hope that their Highnesses will decide upon the conversion of these people to our holy faith, to which they seem much inclined.

I have already stated how I sailed one hundred and seven leagues along the sea-coast of Juana, in a straight line from west to east. I can therefore assert that this island is larger than England and Scotland together, since beyond these one hundred and seven leagues there remained at the west point two provinces where I did not go, one of which they call Avan, the home of men with tails. These provinces are computed to be fifty or sixty leagues in length, as far as can be gathered from the Indians with me who are acquainted with all these islands. This there, Hispaniola, is larger in circumference than all Spain from Catalonia to Fuentarabia in Biscay, since upon one of its four sides I sailed one hundred and eighty-eight leagues from west to east. This is worth having, and must on no account be given up. I have taken possession of all these islands, for their Highnesses, and all may be more extensive than I know, or can say, and I hold them for their Highnesses, who can command them as absolutely as the kingdoms of Castile. In Hispaniola,

in the most convenient place, most accessible for the gold mines and all commerce with the mainland on this side or with that of the great Khan, on the other, with which there would be great trade and profit, I have taken possession of a large town, which I have named the City of Navidad. I began fortifications there which should be completed by this time, and I have left in it men enough to hold it, with arms, artillery, and provisions for more than a year; and a boat with a master seaman skilled in the arts necessary to make others; I am so friendly with the king of that country that he was proud to call me his brother and hold me as such. Even should he change his mind and wish to quarrel with my men, neither he nor his subjects know what arms are, nor wear clothes, as I have said. They are the most timid people in the world, so that only the men remaining there could destroy the whole region, and run no risk if they know how to behave themselves properly. In all these islands the men seem to be satisfied with one wife, except they allow as many as twenty to their chief or king. The women appear to me to work harder than the men, and so far I can hear they have nothing of their own, for I think I perceived that what one had others shared, especially food. In the islands so far, I have found no monsters, as some expected, but, on the contrary, they are people of very handsome appearance. They are not black as in Guinea, though their hair is straight and coarse, as it does not grow where the sun's rays are too ardent. And in truth the sun has extreme power here, since it is within twenty-six degrees of the equinoctial line. In these islands there are mountains where the cold this winter was very severe, but the people endure it from habit, and with the aid of the meat they eat with very hot spices.

As for monsters, I have found no trace of them except at the point in the second isle as one enters the Indies, which is inhabited by a people considered in all the isles as most ferocious, who eat human flesh. They possess many canoes, with which they overrun all the isles of India, stealing and seizing all they can. They are not worse looking than the others, except that they wear their hair long like women, and use bows and arrows of the same cane, with sharp stick at the end for want of iron, of which they have none. They are ferocious compared to these other races, who are extremely cowardly; but I only hear this from the others. They are said to make treaties of marriage with the women in the first isle to be met with coming from Spain to the Indies, where there are no men. These women have no feminine occupation, but use bows and arrows of cane like those before mentioned, and cover and arm themselves with plates of copper, of which they have a great quantity. Another island, I am told, is larger than Hispaniola, where the natives have no hair, and where there is countless gold; and from them all I bring Indians to testify to this. To speak, in conclusion, only of what has been done during this hurried voyage, their Highnesses will see that I can give them as much gold as they desire, if they will give me a little assistance, spices, cotton, as much as their Highnesses may command to be shipped, and mastic as much as their Highnesses choose to send for, which until now has only been found in Greece, in the isle of Chios, and the Signoria can get its own price for it; as much lign-aloe as they command to be shipped, and as many slaves as they choose to send for, all heathens. I think I have found rhubarb and cinnamon. Many other things of value will be discovered by the men I left behind me, as I stayed nowhere when the wind allowed me to pursue my voyage, except in the City of Navidad, which I left fortified and safe. Indeed, I might have accomplished much more, had the crews served me as they ought to have done. The eternal and almighty God, our Lord, it is Who gives to all who walk in His way, victory over things apparently impossible, and in this case signally so, because although these lands had been imagined and talked of before they were seen, most men listened incredulously to what was thought to be but an idle tale. But our Redeemer has given victory to our most illustrious King and Queen, and to their Kingdoms rendered famous by this glorious event, at which all Christendom should rejoice, celebrating it with great festivities and solemn Thanksgivings to the Holy Trinity, with fervent prayers for the high distinction that will accrue to them from turning so many peoples to our holy faith; and also from the temporal benefits that not only Spain but all Christian nations will obtain.

Thus I record. What has happened in a brief note written on board the Caravel, off the Canary Isles, on the 15th of February, 1493.

Yours to command,

THE ADMIRAL.

John Cabot's Discovery of North America (1497)

John Cabot (Giovanni Caboto) was a Venetian citizen who settled in England in the 1480s among merchants interested in the discovery of new lands. With their financial support and a patent granted by King Henry VII, Cabot set sail aboard the *Matthew*, discovering the mainland of North America. England based its claims to North America on Cabot's discoveries. Contemporary accounts of Cabot's discoveries are detailed in these dispatches.

Letter from Lorenzo Pasqualigo to His Brothers Alvise and Francesco.

London, 23rd August, 1497

Our Venetian, who went with a small ship from Bristol to find new islands, has come back, and says he has discovered, 700 leagues off, the mainland of the country of the Gran Cam, and that he coasted along it for 300 leagues, and landed, but did not see any person. But he has brought here to the king certain snares spread to take game, and a needle for making nets, and he found some notched trees, from which he judged that there were inhabitants. Being in doubt, he came back to the ship. He has been away three months on the voyage, which is certain, and, in returning, he saw two islands to the right, but he did not wish to land, lest he should lose time for he was in want of provisions. This king has been much pleased. He says that the tides are slack, and do not make currents as they do here. The king has promised for another time, ten armed ships as he desires, and has given him all the prisoners, except such as are confined for high treason, to go with him, as he has requested; and has granted him money to amuse himself till then. Meanwhile, he is with his Venetian wife and his sons at Bristol. His name is Zuam Talbot, and he is called the Great Admiral, great honour being paid to him, and he goes dressed in silk. The English are ready to go with him, and so are many of our rascals. The discoverer of these things has planted a large cross in the ground with a banner of England, and one of St. Mark, as he is a Venetian; so that our flag has been hoisted very far away.

First Despatch of Raimondo di Soncino to the Duke of Milan. (Extract.)

24th August, 1497

Some month afterwards His Majesty sent a Venetian, who is a distinguished sailor, and who was much skilled in the discovery of new islands, and he has returned safe, and has discovered two very large and fertile islands, having, it would seem, discovered the seven cities 400 leagues from England to the westward. These successes led His Majesty at once to entertain the intention of sending him with fifteen or twenty vessels.

Second Despatch of Raimondo di Soncino to the Duke of Milan.

London, 18th December, 1497

My most illustrious and most excellent Lord,

Perhaps amidst so many occupations of your Excellency it will not be unwelcome to learn how this Majesty has acquired a part of Asia without drawing his sword. In this kingdom there is a certain Venetian named Zoanne Caboto, of gentle disposition, very expert in navigation, who, seeing that the most serene Kings of Portugal and Spain had occupied unknown islands, meditated the achievement of a similar acquisition for the said Majesty. Having obtained royal privileges securing to himself the use of the dominions he might discover, the sovereignty being reserved to the Crown, he entrusted his fortune to a small vessel with a crew of 18 persons, and set out from Bristo, a port in the western part of this kingdom. Having passed Ibernica, which is still further to the west, and then shaped a northerly course, he began to navigate to the eastern part, leaving (during several days) the North Star on the right hand; and having wandered thus for a long time, at length he hit upon land, where he hoisted the royal standard, and took possession for his Highness, and, having obtained various proofs of his discovery, he returned. The said Messer Zoanne, being a foreigner and poor, would not have been believed if the crew, who are nearly all English, and belonging to Bristo, had not testified that what he said was the truth. This Messer Zoanne has the description of the world on a chart, and also on a solid sphere which he has constructed, and on which he shows where he has been; and, proceeding towards the east, he has passed as far as the country of the Tanais. And they say that there the land is excellent and [the climate?] temperate, suggesting that brasil and silk grow there. They affirm that the sea is full of fish, which are not only taken with a net, but also with a basket, a stone being fastened to it in order to keep it in the water; and this I have heard stated by the said Messer Zoanne.

The said Englishmen, his companions, say that they took so many fish that this kingdom will no longer have need of Iceland, from which country there is an immense trade in the fish they call stock-fish. But Messer Zoanne has set his mind on higher things, for he thinks that, when that place has been occupied, he will keep on still further towards the east, where he will be opposite to an island called Cipango, situated in the equinoctial region, where he believes that all the spices of the world, as well as the jewels, are found. He further says that he was once at Mecca, whither the spices are brought by caravans from distant countries; and having inquired from whence they were brought and where they grow, they answered that they did not know, but that such merchandize was brought from distant countries by other caravans to their home; and they further say that they are also conveyed from other remote regions. And he adduced this argument, that if the eastern people tell those in the south that these things come from a far distance from them, presupposing the rotundity of the earth, it must be that the last turn would be by the north towards the west; and it is said that in this way the route would not cost more than it costs now, and I also believe it. And what is more, this Majesty, who is wise and not prodigal, reposes such trust in him because of what he has already achieved, that he gives him a good maintenance, as Messer Zoanne has himself told me. And it is said that before long his Majesty will arm some ships for him, and will give him all the malefactors to go to that country and form a colony, so that they hope to establish a greater depot of spices in London than there is in Alexandria. The principal people in the enterprise belong to Bristo. They are great seamen, and, now that they know where to go, they say that the voyage thither will not occupy more than 15 days after leaving Ibernica. I have also spoken with a Burgundian, who was a companion of Messer Zoanne, who affirms all this, and who wishes to return because the Admiral (for so Messer Zoanne is entitled) has given him an island, and has given another to his barber of Castione, who is a Genoese, and both look upon themselves as Counts; nor do they look upon my Lord the Admiral as less than a Prince. I also believe that some poor Italian friars are going on this voyage, who have all had bishopricks promised to them. And if I had made friends with the Admiral when he was about to sail, I should have got an archbishoprick at least; but I have thought that the benefits reserved for me by your Excellency will be more secure. I would venture to pray that, in the event of a vacancy taking place in my absence, I may be put in possession, and that I may not be superseded by those who, being present, can be more diligent than I, who am reduced in this country to eating at each meal ten or twelve kinds of victuals, and to being three hours at table every day, two for love of your Excellency, to whom I humbly recommend myself.

Your Excellency's most humble servant,

RAIMUNDUS.

The Founding of St. Augustine (1565)

The only such account available in English, this document describes the 1565 Spanish expedition establishing St. Augustine, Florida, the first permanent European settlement and the oldest city in the United States. The ship's chaplain, Father Lopez de Mendoza Grajalas, relates how the French Huguenot colony in the area was routed in the name of King Philip II of Spain, ending French hegemony in Florida.

YOUR LORDSHIP will remember that, when the fleet was in preparation in Spain, I went to see the captain-general at the harbor of St. Mary, and, as I told you, he showed me a letter from his Royal Highness Philip II, signed with his name. In this letter his Majesty told him that on May 20 some ships had

left France carrying seven hundred men and two hundred women. As I have stated, we learned at St. John's of Porto Rico that our despatch-boat had been captured. This fact, joined to the reflection that our fleet was much injured by the storm, and that of the ten vessels which left Cadiz only four remained, besides the one bought at the last port to transport the horses and troops—all this made it evident to our captain-general, a man of arms, that the French would likely be waiting for him near the harbors, a little farther on; that is, off Monte Christi, Havana, and the Cape of Las Canas, which lie on the same side, and precisely on our route to Florida. This was all the more to be expected since the French had come in possession of our plan to unite our forces at Havana. Not wishing, however, to encounter the French, having now lost our ships, and having but feeble means of defense, the general decided to take a northerly course, and pursue a new route, through the Bahama Channel, leaving the enemy to the windward. When I suggested this route to the admiral and the pilot, they said it was important and necessary to abandon the usual route, by way of Havana.

Following this dangerous navigation, the Lord permitted the admiral to arrive safely in port on Sunday, the 20th of August. We saw two islands, called the Bahama Islands. The shoals which lie between them are so extensive that the billows are felt far out at sea. The general gave orders to take soundings. The ship purchased at Porto Rico got aground that day in two and a half fathoms of water. At first, we feared she might stay there; but she soon got off and came to us. Our galley, one of the best ships afloat, found herself all day in the same position, when suddenly her keel struck three times violently against the bottom. The sailors gave themselves up for lost, and the water commenced to pour into her hold. But, as we had a mission to fulfill for Jesus Christ and His blessed mother, two heavy waves, which struck her abaft, set her afloat again, and soon after we found her in deep water, and at midnight we entered the Bahama Channel.

ON Saturday, the 25th, the captain-general [Menendez] came to visit our vessel and get the ordnance for disembarkment at Florida. This ordnance consisted of two rampart pieces, of two sorts of culverins, of very small caliber, powder and balls; and he also took two soldiers to take care of the pieces. Having armed his vessel, he stopped and made us an address, in which he instructed us what we had to do on arrival at the place where the French were anchored. I will not dwell on this subject, on which there was a good deal said for and against, although the opinion of the general finally prevailed. There were two thousand (hundred) [sic] Frenchmen in the seaport into which we were to force an entrance. I made some opposition to the plans, and begged the general to consider that he had the care of a thousand souls, for which he must give a good account....

On Tuesday, the 4th, the fleet left the place of which I have been speaking—and we took a northerly course, keeping all the time close to the coast. On Wednesday, the 5th, two hours before sunset, we saw four French ships at the mouth of a river. When we were two leagues from them, the first galley joined the rest of the fleet, which was composed of four other vessels. The general concerted a plan with the captains and pilots, and ordered the flagship, the San Pelayo, and a chaloupe to attack the French flagship, the Trinity, while the first galley and another chaloupe would attack the French galley, both of which vessels were very large and powerful. All the ships of our fleet put themselves in good position; the troops were in the best of spirits, and full of confidence in the great talents of the captain-general. They followed the galley; but, as our general is a very clever and artful officer, he did not fire, nor seek to make any attack on the enemy. He went straight to the French galley, and cast anchor about eight paces from her. The other vessels went to the windward, and very near the enemy. During the maneuvers, which lasted until about two hours after sunset, not a word was said on either side. Never in my life have I known such stillness. Our general inquired of the French galley, which was the vessel nearest his.

"Whence does this fleet come?"

They answered, "From France."

"What are you doing here?" said the Adelantado. "This is the territory of King Philip II. I order you to leave directly; for I neither know who you are nor what you want here."

The French commander then replied, "I am bringing soldiers and supplies to the fort of the King of France."

He then asked the name of the general of our fleet, and was told, "Pedro Menendez de Aviles, Captain-general of the King of Spain, who have come to hang all Lutherans I find here."

Our general then asked him the name of his commander, and he replied, "Lord Gasto."

While this parleying was going on, a long-boat was sent from the galley to the flagship. The person charged with this errand managed to do it so secretly that we could not hear what was said; but we understood the reply of the French to be, "I am the admiral," which made us think he wished to surrender, as they were in so small a force.

Scarcely had the French made this reply, when they slipped their cables, spread their sails, and passed through our midst. Our admiral, seeing this, followed the French commander, and called upon him to lower his sails, in the name of King Philip, to which he received an impertinent answer. Immediately our admiral gave an order to discharge a small culverin, the ball from which struck the vessel amidships, and I thought she was going to founder. We gave chase, and some time after he again called on them to lower their sails.

"I would sooner die first than surrender!" replied the French commander.

The order was given to fire a second shot, which carried off five or six men; but, as these miserable devils are very good sailors, they maneuvered so well that we could not take one of them; and, notwithstanding all the guns we fired at them, we did not sink one of their ships. We only got possession of one of their large boats, which was of great service to us afterwards. During the whole night our flagship [the San Pelayo] and the galley chased the French flagship [Trinity] and galley....

The next morning, being fully persuaded that the storm had made a wreck of our galley, or that, at least, she had been driven a hundred leagues out to sea, we decided that so soon as daylight came we would weigh anchor, and withdraw in good order, to a river [Seloy] which was below the French colony, and there disembark, and construct a fort, which we would defend until assistance came to us....

OUR fort is at a distance of about fifteen leagues from that of the enemy [Fort Caroline]. The energy and talents of those two brave captains, joined to the efforts of their brave soldiers, who had no tools with which to work the earth, accomplished the construction of this fortress of defense; and, when the general disembarked, he was quite surprised with what had been done.

On Saturday, the 8th, the general landed with many banners spread, to the sound of trumpets and salutes of artillery. As I had gone ashore the evening before, I took a cross and went to meet him, singing the hymn Te Deum laudamus. The general marched up to the cross, followed by all who accompanied him, and there they all kneeled and embraced the cross. A large number of Indians watched these proceedings and imitated all they saw done. The same day the general took formal possession of the country in the name of his Majesty, and all the captains took the oath of allegiance to him, as their general and governor of the country....

Our general was very bold in all military matters, and a great enemy of the French. He immediately assembled his captains and planned an expedition to attack the French settlement and fort on the river with five hundred men; and, in spite of the opinion of a majority of them, and of my judgment and of another priest, he ordered his plan to be carried out. Accordingly, on Monday, September 17, he set out with five hundred men, well provided with fire-arms and pikes, each soldier carrying with him a sack of bread and supply of wine for the journey. They also took with them two Indian chiefs, who were the implacable enemies of the French, to serve as guides....

They marched the whole distance until Tuesday evening, the 18th of September, 1565, when they arrived within a quarter of a league of the enemy's fort [Caroline], where they remained all night up to their waists in water. When daylight came, Captains Lopez, Patino, and Martin Ochoa had already been to examine the fort, but, when they went to attack the fort, a greater part of the soldiers were so confused they scarcely knew what they were about.

On Thursday morning our good captain-general, accompanied by his son-in-law, Don Pedro de Valdes and Captain Patino, went to inspect the fort. He showed so much vivacity that he did not seem to have suffered by any of the hardships to which he had been exposed, and, seeing him march off so brisk, the others took courage, and without exception followed his example. It appears the enemy did not perceive their approach until the very moment of the attack, as it was very early in the morning and had rained in torrents. The greater part of the soldiers of the fort were still in bed. Some arose in their shirts, and others, quite naked, begged for quarter; but, in spite of that, more than one hundred and forty were killed.

A great Lutheran cosmographer and magician was found among the dead. The rest, numbering about three hundred, scaled the walls, and either took refuge in the forest or on their ships floating in the river, laden with treasures, so that in an hour's time the fort was in our possession, without our having lost a single man, or even had one wounded.

The taking of this fort gained us many valuable objects, namely, two hundred pikes, a hundred and twenty helmets, a quantity of arquebuses and shields, a quantity of clothing, linen, fine cloths, two hundred tons of flour, a good many barrels of biscuit, two hundred bushels of wheat, three horses, four asses, and two she-asses, hogs, tallow, books, furnace, flour-mill, and many other things of little value. But the greatest advantage of this victory is certainly the triumph which our Lord has granted us, and which will be the means of the Holy Gospel being introduced into this country, a thing necessary to prevent the loss of many souls....

When we had reached the sea, we went about three leagues along the coast in search of our comrades. It was about ten o'clock at night when we met them, and there was a mutual rejoicing at having found each other. Not far off we saw the camp fires of our enemies, and our general ordered two of our soldiers to go and reconnoiter them, concealing themselves in the bushes, and to observe well the ground where they were encamped, so as to know what could be done. About two o'clock the men returned, saying that the enemy was on the other side of the river, and that we could not get at them. Immediately the general ordered two soldiers and four sailors to return to where we had left the boats, and bring them down the river, so that we might pass over to where the enemy was. Then he marched his troops forward to the river and we saw a great many of the enemy go down to the river to get shell-fish for food.

Our general, who was observing all that, enlightened by the Holy Spirit, said to us,

"I intend to change these clothes for those of a sailor, and take a Frenchman with me (one of those whom we had brought with us from Spain), and we will go and talk with these Frenchmen. Perhaps they are without supplies, and would be glad to surrender without fighting."

He had scarcely finished speaking before he put his plan into execution. As soon as he had called to them, one of them swam towards and spoke to him; told him of their having been shipwrecked and the distress they were in; that they had not eaten bread for eight or ten days; and, what is more, stated that all, or at least the greater part of them. Immediately the general sent him back to his countrymen, to say they must surrender, and give up their arms, or he would put them all to death. A French gentleman, who was a sergeant, brought back the reply that they would surrender on condition their lives should be spared.

After having parleyed a long time, our brave captain-general answered "that he would make no promises, that they must surrender unconditionally, and lay down their arms, because, if he spared their lives, he wanted them to be grateful for it, and, if they were put to death, that there should be no cause for complaint." Seeing that there was nothing else left for them to do, the sergeant returned to the camp; and soon after he brought all their arms and flags, and gave them up to the general, and surrendered unconditionally. Finding they were all Lutherans, the captain-general ordered them all to be put to death; but, as I was a priest, and had bowels of mercy, I begged him to grant me the favor of sparing those whom we might find to be Christians. He granted it; and I made investigations, and found ten or twelve of the men Roman Catholics, whom we brought back. All the others were executed, because they were Lutherans and enemies of our Holy Catholic faith.

All this took place on Saturday (St. Michael's Day), September 29, 1565....

The Constitution of the Iroquois Nations (c. 1570)

Roughly around 1570, the prophet Deganawidah and his disciple Hiawatha founded the confederacy of the Iroquois. This confederacy was created to end intermittent warfare among the five Native American nations who occupied what is now New York State and surrounding territory. Power was carefully shared among the five nations, and there were numerous checks and balances designed to prevent one nation from gaining hegemony over the others. Benjamin Franklin cited this document as an important source for the American Constitution.

The Great Binding Law, Gayanashagowa

1. I am Deganawidah and with the Five Nations' Confederate Lords I plant the Tree of Great Peace. I plant it in your territory, Adodarhoh, and the Onondaga Nation, in the territory of you who are Firekeepers.

I name the tree the Tree of the Great Long Leaves. Under the shade of this Tree of the Great Peace we spread the soft white feathery down of the globe thistle as seats for you, Adodarhoh, and your cousin Lords.

We place you upon those seats, spread soft with the feathery down of the globe thistle, there beneath the shade of the spreading branches of the Tree of Peace. There shall you sit and watch the Council Fire of the Confederacy of the Five Nations, and all the affairs of the Five Nations shall be transacted at this place before you, Adodarhoh, and your cousin Lords, by the Confederate Lords of the Five Nations.

2. Roots have spread out from the Tree of the Great Peace, one to the north, one to the east, one to the south and one to the west. The name of these roots is The Great White Roots and their nature is Peace and Strength.

If any man or any nation outside the Five Nations shall obey the laws of the Great Peace and make known their disposition to the Lords of the Confederacy, they may trace the Roots to the Tree and if their minds are clean and they are obedient and promise to obey the wishes of the Confederate Council, they shall be welcomed to take shelter beneath the Tree of the Long Leaves.

We place at the top of the Tree of the Long Leaves an Eagle who is able to see afar. If he sees in the distance any evil approaching or any danger threatening he will at once warn the people of the Confederacy.

3. To you Adodarhoh, the Onondaga cousin Lords, I and the other Confederate Lords have entrusted the caretaking and the watching of the Five Nations Council Fire.

When there is any business to be transacted and the Confederate Council is not in session, a messenger shall be dispatched either to Adodarhoh, Hononwirehtonh or Skanawatih, Fire Keepers, or to their War Chiefs with a full statement of the case desired to be considered. Then shall Adodarhoh call his cousin [associate] Lords together and consider whether or not the case is of sufficient importance to demand the attention of the Confederate Council. If so, Adodarhoh shall dispatch messengers to summon all the Confederate Lords to assemble beneath the Tree of the Long Leaves.

When the Lords are assembled the Council Fire shall be kindled, but not with chestnut wood, and Adodarhoh shall formally open the Council.

Then shall Adodarhoh and his cousin Lords, the Fire Keepers, announce the subject for discussion.

The Smoke of the Confederate Council Fire shall ever ascend and pierce the sky so that other nations who may be allies may see the Council Fire of the Great Peace.

Adodarhoh and his cousin Lords are entrusted with the Keeping of the Council Fire.

4. You, Adodarhoh, and your thirteen cousin Lords, shall faithfully keep the space about the Council Fire clean and you shall allow neither dust nor dirt to accumulate. I lay a Long Wing before you as a broom. As a weapon against a crawling creature I lay a staff with you so that you may thrust it away from the Council Fire. If you fail to cast it out then call the rest of the United Lords to your aid.

5. The Council of the Mohawk shall be divided into three parties as follows: Tekarihoken, Ayonhwhathah and Shadেকariwade are the first party; Sharenhowaneh, Deyoenhegwenh and Oghrenghrehgowah are the second party, and Dehennakrineh, Aghstawenserentah and Shoskoharowaneh are the third party. The third party is to listen only to the discussion of the first and second parties and if an error is made or the proceeding is irregular they are to call attention to it, and when the case is right and properly decided by the two parties they shall confirm the decision of the two parties and refer the case to the Seneca Lords for their decision. When the Seneca Lords have decided in accord with the Mohawk Lords, the case or question shall be referred to the Cayuga and Oneida Lords on the opposite side of the house.

6. I, Deganawidah, appoint the Mohawk Lords the heads and the leaders of the Five Nations Confederacy. The Mohawk Lords are the foundation of the Great Peace and it shall, therefore, be against the Great Binding Law to pass measures in the Confederate Council after the Mohawk Lords have protested against them.

No council of the Confederate Lords shall be legal unless all the Mohawk Lords are present.

7. Whenever the Confederate Lords shall assemble for the purpose of holding a council, the Onondaga Lords shall open it by expressing their gratitude to their cousin Lords and greeting them, and they shall make an address and offer thanks to the earth where men dwell, to the streams of water, the pools, the springs and the lakes, to the maize and the fruits, to the medicinal herbs and trees, to the forest trees for their usefulness, to the animals that serve as food and give their pelts for clothing, to the great winds and the lesser winds, to the Thunderers, to the Sun, the mighty warrior, to the moon, to the messengers of the Creator who reveal his wishes and to the Great Creator who dwells in the heavens above, who gives all the things useful to men, and who is the source and the ruler of health and life.

Then shall the Onondaga Lords declare the council open.

The council shall not sit after darkness has set in.

8. The Firekeepers shall formally open and close all councils of the Confederate Lords, and they shall pass upon all matters deliberated upon by the two sides and render their decision.

Every Onondaga Lord (or his deputy) must be present at every Confederate Council and must agree with the majority without unwarrantable dissent, so that a unanimous decision may be rendered.

If Adodarhoh or any of his cousin Lords are absent from a Confederate Council, any other Firekeeper may open and close the Council, but the Firekeepers present may not give any decisions, unless the matter is of small importance.

9. All the business of the Five Nations Confederate Council shall be conducted by the two combined bodies of Confederate Lords. First the question shall be passed upon by the Mohawk and Seneca Lords, then it shall be discussed and passed by the Oneida and Cayuga Lords. Their decisions shall then be referred to the Onondaga Lords, (Fire Keepers) for final judgement.

The same process shall obtain when a question is brought before the council by an individual or a War Chief.

10. In all cases the procedure must be as follows: when the Mohawk and Seneca Lords have unanimously agreed upon a question, they shall report their decision to the Cayuga and Oneida Lords who shall deliberate upon the question and report a unanimous decision to the Mohawk Lords. The Mohawk Lords will then report the standing of the case to the Firekeepers, who shall render a decision as they see fit in case of a disagreement by the two bodies, or confirm the decisions of the two bodies if they are identical. The Fire Keepers shall then report their decision to the Mohawk Lords who shall announce it to the open council.

11. If through any misunderstanding or obstinacy on the part of the Fire Keepers, they render a decision at variance with that of the Two Sides, the Two Sides shall reconsider the matter and if their decisions are jointly the same as before they shall report to the Fire Keepers who are then compelled to confirm their joint decision.

12. When a case comes before the Onondaga Lords (Fire Keepers) for discussion and decision, Adodarho shall introduce the matter to his comrade Lords who shall then discuss it in their two bodies. Every Onondaga Lord except Hononwiretonh shall deliberate and he shall listen only. When a unanimous decision shall have been reached by the two bodies of Fire Keepers, Adodarho shall notify Hononwiretonh of the fact when he shall confirm it. He shall refuse to confirm a decision if it is not unanimously agreed upon by both sides of the Fire Keepers.

13. No Lord shall ask a question of the body of Confederate Lords when they are discussing a case, question or proposition. He may only deliberate in a low tone with the separate body of which he is a member.

14. When the Council of the Five Nation Lords shall convene they shall appoint a speaker for the day. He shall be a Lord of either the Mohawk, Onondaga or Seneca Nation.

The next day the Council shall appoint another speaker, but the first speaker may be reappointed if there is no objection, but a speaker's term shall not be regarded more than for the day.

15. No individual or foreign nation interested in a case, question or proposition shall have any voice in the Confederate Council except to answer a question put to him or them by the speaker for the Lords.

16. If the conditions which shall arise at any future time call for an addition to or change of this law, the case shall be carefully considered and if a new beam seems necessary or beneficial, the proposed change shall be voted upon and if adopted it shall be called, "Added to the Rafters."

Rights, Duties, and Qualifications of Lords

17. A bunch of a certain number of shell [wampum] strings each two spans in length shall be given to each of the female families in which the Lordship titles are vested. The right of bestowing the title shall be hereditary in the family of the females legally possessing the bunch of shell strings and the strings shall be the token that the females of the family have the proprietary right to the Lordship title for all time to come, subject to certain restrictions hereinafter mentioned.

18. If any Confederate Lord neglects or refuses to attend the Confederate Council, the other Lords of the Nation of which he is a member shall require their War Chief to request the female sponsors of the Lord so guilty of defection to demand his attendance of the Council. If he refuses, the women holding the title shall immediately select another candidate for the title.

No Lord shall be asked more than once to attend the Confederate Council.

19. If at any time it shall be manifest that a Confederate Lord has not in mind the welfare of the people or disobeys the rules of this Great Law, the men or women of the Confederacy, or both jointly, shall come to the Council and upbraid the erring Lord through his War Chief. If the complaint of the people through the War Chief is not heeded the first time it shall be uttered again and then if no attention is given a third complaint and warning shall be given. If the Lord is contumacious the matter shall go to the council of War Chiefs. The War Chiefs shall then divest the erring Lord of his title by order of the women in whom the titleship is vested. When the Lord is deposed the women shall notify the Confederate Lords through their War Chief, and the Confederate Lords shall sanction the act. The women will then select another of their sons as a candidate and the Lords shall elect him. Then shall the chosen one be installed by the Installation Ceremony.

When a Lord is to be deposed, his War Chief shall address him as follows:

"So you, _____, disregard and set at naught the warnings of your women relatives. So you fling the warnings over your shoulder to cast them behind you.

"Behold the brightness of the Sun and in the brightness of the Sun's light I depose you of your title and remove the sacred emblem of your Lordship title. I remove from your brow the deer's antlers, which was the emblem of your position and token of your nobility. I now depose you and return the antlers to the women whose heritage they are."

The War Chief shall now address the women of the deposed Lord and say:

"Mothers, as I have now deposed your Lord, I now return to you the emblem and the title of Lordship, therefore repossess them."

Again addressing himself to the deposed Lord he shall say:

"As I have now deposed and discharged you so you are now no longer Lord. You shall now go your way alone, the rest of the people of the Confederacy will not go with you, for we know not the kind of mind that possesses you. As the Creator has nothing to do with wrong so he will not come to rescue you from the precipice of destruction in which you have cast yourself. You shall never be restored to the position which you once occupied."

Then shall the War Chief address himself to the Lords of the Nation to which the deposed Lord belongs and say:

"Know you, my Lords, that I have taken the deer's antlers from the brow of _____, the emblem of his position and token of his greatness."

The Lords of the Confederacy shall then have no other alternative than to sanction the discharge of the offending Lord.

20. If a Lord of the Confederacy of the Five Nations should commit murder the other Lords of the Nation shall assemble at the place where the corpse lies and prepare to depose the criminal Lord. If it is impossible to meet at the scene of the crime the Lords shall discuss the matter at the next Council of their Nation and request their War Chief to depose the Lord guilty of crime, to "bury" his women relatives and to transfer the Lordship title to a sister family.

The War Chief shall address the Lord guilty of murder and say:

"So you, _____ (giving his name) did kill _____ (naming the slain man), with your own hands! You have committed a grave sin in the eyes of the Creator. Behold the bright light of the Sun, and in the brightness of the Sun's light I depose you of your title and remove the horns, the sacred emblems of your Lordship title. I remove from your brow the deer's antlers, which was the emblem of your position and token of your nobility. I now depose you and expel you and you shall depart at once from the territory of the Five Nations Confederacy and nevermore return again. We, the Five Nations Confederacy, moreover, bury your women relatives because the ancient Lordship title was never intended to have any union with bloodshed. Henceforth it shall not be their heritage. By the evil deed that you have done they have forfeited it forever."

The War Chief shall then hand the title to a sister family and he shall address it and say:

"Our mothers, _____, listen attentively while I address you on a solemn and important subject. I hereby transfer to you an ancient Lordship title for a great calamity has befallen it in the hands of the family of a former Lord. We trust that you, our mothers, will always guard it, and that you will warn your Lord always to be dutiful and to advise his people to ever live in love, peace and harmony that a great calamity may never happen again."

21. Certain physical defects in a Confederate Lord make him ineligible to sit in the Confederate Council. Such defects are infancy, idiocy, blindness, deafness, dumbness and impotency. When a Confederate Lord is restricted by any of these conditions, a deputy shall be appointed by his sponsors to act for him, but in case of extreme necessity the restricted Lord may exercise his rights.

22. If a Confederate Lord desires to resign his title he shall notify the Lords of the Nation of which he is a member of his intention. If his coactive Lords refuse to accept his resignation he may not resign his title.

A Lord in proposing to resign may recommend any proper candidate, which recommendation shall be received by the Lords, but unless confirmed and nominated by the women who hold the title the candidate so named shall not be considered.

23. Any Lord of the Five Nations Confederacy may construct shell strings (or wampum belts) of any size or length as pledges or records of matters of national or international importance.

When it is necessary to dispatch a shell string by a War Chief or other messenger as the token of a summons, the messenger shall recite the contents of the string to the party to whom it is sent. That party shall repeat the message and return the shell string and if there has been a summons he shall make ready for the journey.

Any of the people of the Five Nations may use shells (or wampum) as the record of a pledge, contract or an agreement entered into and the same shall be binding as soon as shell strings shall have been exchanged by both parties.

24. The Lords of the Confederacy of the Five Nations shall be mentors of the people for all time. The thickness of their skin shall be seven spans—which is to say that they shall be proof against anger, offensive actions and criticism. Their hearts shall be full of peace and good will and their minds filled with a yearning for the welfare of the people of the Confederacy. With endless patience they shall carry out their duty and their firmness shall be tempered with a tenderness for their people. Neither anger nor fury shall find lodgement in their minds and all their words and actions shall be marked by calm deliberation.

25. If a Lord of the Confederacy should seek to establish any authority independent of the jurisdiction of the Confederacy of the Great Peace, which is the Five Nations, he shall be warned three times in open council, first by the women relatives, second by the men relatives and finally by the Lords of the Confederacy of the Nation to which he belongs. If the offending Lord is still obdurate he shall be dismissed by the War Chief of his nation for refusing to conform to the laws of the Great Peace. His nation shall then install the candidate nominated by the female name holders of his family.

26. It shall be the duty of all of the Five Nations Confederate Lords, from time to time as occasion demands, to act as mentors and spiritual guides of their

people and remind them of their Creator's will and words. They shall say:

"Hearken, that peace may continue unto future days!

"Always listen to the words of the Great Creator, for he has spoken.

"United people, let not evil find lodging in your minds.

"For the Great Creator has spoken and the cause of Peace shall not become old.

"The cause of peace shall not die if you remember the Great Creator."

Every Confederate Lord shall speak words such as these to promote peace.

27. All Lords of the Five Nations Confederacy must be honest in all things. They must not idle or gossip, but be men possessing those honorable qualities that make true royaneh [nobility]. It shall be a serious wrong for anyone to lead a Lord into trivial affairs, for the people must ever hold their Lords high in estimation out of respect to their honorable positions.

28. When a candidate Lord is to be installed he shall furnish four strings of shells (or wampum) one span in length bound together at one end. Such will constitute the evidence of his pledge to the Confederate Lords that he will live according to the constitution of the Great Peace and exercise justice in all affairs.

When the pledge is furnished the Speaker of the Council must hold the shell strings in his hand and address the opposite side of the Council Fire and he shall commence his address saying: "Now behold him. He has now become a Confederate Lord. See how splendid he looks." An address may then follow. At the end of it he shall send the bunch of shell strings to the opposite side and they shall be received as evidence of the pledge. Then shall the opposite side say:

"We now do crown you with the sacred emblem of the deer's antlers, the emblem of your Lordship. You shall now become a mentor of the people of the Five Nations. The thickness of your skin shall be seven spans—which is to say that you shall be proof against anger, offensive actions and criticism. Your heart shall be filled with peace and good will and your mind filled with a yearning for the welfare of the people of the Confederacy. With endless patience you shall carry out your duty and your firmness shall be tempered with tenderness for your people. Neither anger nor fury shall find lodgement in your mind and all your words and actions shall be marked with calm deliberation. In all of your deliberations in the Confederate Council, in your efforts at law making, in all your official acts, self interest shall be cast into oblivion. Cast not over your shoulder behind you the warnings of the nephews and nieces should they chide you for any error or wrong you may do, but return to the way of the Great Law, which is just and right. Look and listen for the welfare of the whole people and have always in view not only the present but also the coming generations, even those whose faces are yet beneath the surface of the ground—the unborn of the future Nation."

29. When a Lordship title is to be conferred, the candidate Lord shall furnish the cooked venison, the corn bread and the corn soup, together with other necessary things and the labor for the Conferring of Titles Festival.

30. The Lords of the Confederacy may confer the Lordship title upon a candidate whenever the Great Law is recited, if there be a candidate, for the Great Law speaks all the rules.

31. If a Lord of the Confederacy should become seriously ill and be thought near death, the women who are heirs of his title shall go to his house and lift his crown of deer antlers, the emblem of his Lordship, and place them at one side. If the Creator spares him and he rises from his bed of sickness he may rise with the antlers on his brow. The following words shall be used to temporarily remove the antlers:

"Now our comrade Lord (or our relative Lord) the time has come when we must approach you in your illness. We remove for a time the deer's antlers from your brow, we remove the emblem of your Lordship title. The Great Law has decreed that no Lord should end his life with the antlers on his brow. We therefore lay them aside in the room. If the Creator spares you and you recover from your illness you shall rise from your bed with the antlers on your brow as before and you shall resume your duties as Lord of the Confederacy and you may labor again for the Confederate people."

32. If a Lord of the Confederacy should die while the Council of the Five Nations is in session the Council shall adjourn for ten days. No Confederate Council shall sit within ten days of the death of a Lord of the Confederacy.

If the Three Brothers [the Mohawk, the Onondaga and the Seneca] should lose one of their Lords by death, the Younger Brothers [the Oneida and the Cayuga] shall come to the surviving Lords of the Three Brothers on the tenth day and console them. If the Younger Brothers lose one of their Lords then the Three Brothers shall come to them and console them. And the consolation shall be the reading of the contents of the thirteen shell [wampum] strings of Ayonhwhathah. At the termination of this rite a successor shall be appointed, to be appointed by the women heirs of the Lordship title. If the women are not yet ready to place their nominee before the Lords the Speaker shall say, "Come let us go out." All shall leave the Council or the place of gathering. The installation shall then wait until such a time as the women are ready. The Speaker shall lead the way from the house by saying, "Let us depart to the edge of the woods and lie in waiting on our bellies."

When the women title holders shall have chosen one of their sons the Confederate Lords will assemble in two places, the Younger Brothers in one place and the Three Older Brothers in another. The Lords who are to console the mourning Lords shall choose one of their number to sing the Pacification Hymn as they journey to the sorrowing Lords. The singer shall lead the way and the Lords and the people shall follow. When they reach the sorrowing Lords they shall hail the candidate Lord and perform the rite of Conferring the Lordship Title.

33. When a Confederate Lord dies, the surviving relatives shall immediately dispatch a messenger, a member of another clan, to the Lords in another locality. When the runner comes within hailing distance of the locality he shall utter a sad wail, thus: "Kwa-ah, Kwa-ah, Kwa-ah!" The sound shall be repeated three times and then again and again at intervals as many times as the distance may require. When the runner arrives at the settlement the people shall assemble and one must ask him the nature of his sad message. He shall then say, "Let us consider." Then he shall tell them of the death of

the Lord. He shall deliver to them a string of shells (wampum) and say "Here is the testimony, you have heard the message." He may then return home.

It now becomes the duty of the Lords of the locality to send runners to other localities and each locality shall send other messengers until all Lords are notified. Runners shall travel day and night.

34. If a Lord dies and there is no candidate qualified for the office in the family of the women title holders, the Lords of the Nation shall give the title into the hands of a sister family in the clan until such a time as the original family produces a candidate, when the title shall be restored to the rightful owners.

No Lordship title may be carried into the grave. The Lords of the Confederacy may dispossess a dead Lord of his title even at the grave.

Election of Pine Tree Chiefs

35. Should any man of the Nation assist with special ability or show great interest in the affairs of the Nation, if he proves himself wise, honest and worthy of confidence, the Confederate Lords may elect him to a seat with them and he may sit in the Confederate Council. He shall be proclaimed a "Pine Tree sprung up for the Nation" and shall be installed as such at the next assembly for the installation of Lords. Should he ever do anything contrary to the rules of the Great Peace, he may not be deposed from office—no one shall cut him down—but thereafter everyone shall be deaf to his voice and his advice. Should he resign his seat and title no one shall prevent him. A Pine Tree chief has no authority to name a successor nor is his title hereditary.

Names, Duties and Rights of War Chiefs

36. The title names of the Chief Confederate Lords' War Chiefs shall be:

Ayonwaehs, War Chief under Lord Takarihoken (Mohawk)

Kahonwahdironh, War Chief under Lord Odatschedeh (Oneida)

Ayendes, War Chief under Lord Adodarhoh (Onondaga)

Wenenhs, War Chief under Lord Dekanyonh (Cayuga)

Shoneradowaneh, War Chief under Lord Skanyadariyo (Seneca)

The women heirs of each head Lord's title shall be the heirs of the War Chief's title of their respective Lord.

The War Chiefs shall be selected from the eligible sons of the female families holding the head Lordship titles.

37. There shall be one War Chief for each Nation and their duties shall be to carry messages for their Lords and to take up the arms of war in case of emergency. They shall not participate in the proceedings of the Confederate Council but shall watch its progress and in case of an erroneous action by a Lord they shall receive the complaints of the people and convey the warnings of the women to him. The people who wish to convey messages to the Lords in the Confederate Council shall do so through the War Chief of their Nation. It shall ever be his duty to lay the cases, questions and propositions of the people before the Confederate Council.

38. When a War Chief dies another shall be installed by the same rite as that by which a Lord is installed.

39. If a War Chief acts contrary to instructions or against the provisions of the Laws of the Great Peace, doing so in the capacity of his office, he shall be deposed by his women relatives and by his men relatives. Either the women or the men alone or jointly may act in such a case. The women title holders shall then choose another candidate.

40. When the Lords of the Confederacy take occasion to dispatch a messenger in behalf of the Confederate Council, they shall wrap up any matter they may send and instruct the messenger to remember his errand, to turn not aside but to proceed faithfully to his destination and deliver his message according to every instruction.

41. If a message borne by a runner is the warning of an invasion he shall whoop, "Kwa-ah, Kwa-ah," twice and repeat at short intervals; then again at a longer interval.

If a human being is found dead, the finder shall not touch the body but return home immediately shouting at short intervals, "Koo-weh!"

Clans and Consanguinity

42. Among the Five Nations and their posterity there shall be the following original clans: Great Name Bearer, Ancient Name Bearer, Great Bear, Ancient Bear, Turtle, Painted Turtle, Standing Rock, Large Plover, Deer, Pigeon Hawk, Eel, Ball, Opposite-Side-of-the-Hand, and Wild Potatoes. These clans distributed through their respective Nations, shall be the sole owners and holders of the soil of the country and in them is it vested as a birthright.

43. People of the Five Nations members of a certain clan shall recognize every other member of that clan, irrespective of the Nation, as relatives. Men and women, therefore, members of the same clan are forbidden to marry.

44. The lineal descent of the people of the Five Nations shall run in the female line. Women shall be considered the progenitors of the Nation. They shall own the land and the soil. Men and women shall follow the status of the mother.

45. The women heirs of the Confederated Lordship titles shall be called Royaneh [Noble] for all time to come.

46. The women of the Forty Eight (now fifty) Royaneh families shall be the heirs of the Authorized Names for all time to come.

When an infant of the Five Nations is given an Authorized Name at the Midwinter Festival or at the Ripe Corn Festival, one in the cousinhood of which the infant is a member shall be appointed a speaker. He shall then announce to the opposite cousinhood the names of the father and the mother of the child together with the clan of the mother. Then the speaker shall announce the child's name twice. The uncle of the child shall then take the child in his arms and walking up and down the room shall sing: "My head is firm, I am of the Confederacy." As he sings the opposite cousinhood shall respond by chanting, "Hyenh, Hyenh, Hyenh, Hyenh," until the song is ended.

47. If the female heirs of a Confederate Lord's title become extinct, the title right shall be given by the Lords of the Confederacy to the sister family whom they shall elect and that family shall hold the name and transmit it to their (female) heirs, but they shall not appoint any of their sons as a candidate for a title until all the eligible men of the former family shall have died or otherwise have become ineligible.

48. If all the heirs of a Lordship title become extinct, and all the families in the clan, then the title shall be given by the Lords of the Confederacy to the family in a sister clan whom they shall elect.

49. If any of the Royaneh women, heirs of a titleship, shall willfully withhold a Lordship or other title and refuse to bestow it, or if such heirs abandon, forsake or despise their heritage, then shall such women be deemed buried and their family extinct. The titleship shall then revert to a sister family or clan upon application and complaint. The Lords of the Confederacy shall elect the family or clan which shall in future hold the title.

50. The Royaneh women of the Confederacy heirs of the Lordship titles shall elect two women of their family as cooks for the Lord when the people shall assemble at his house for business or other purposes.

It is not good nor honorable for a Confederate Lord to allow his people whom he has called to go hungry.

51. When a Lord holds a conference in his home, his wife, if she wishes, may prepare the food for the Union Lords who assemble with him. This is an honorable right which she may exercise and an expression of her esteem.

52. The Royaneh women, heirs of the Lordship titles, shall, should it be necessary, correct and admonish the holders of their titles. Those only who attend the Council may do this and those who do not shall not object to what has been said nor strive to undo the action.

53. When the Royaneh women, holders of a Lordship title, select one of their sons as a candidate, they shall select one who is trustworthy, of good character, of honest disposition, one who manages his own affairs, supports his own family, if any, and who has proven a faithful man to his Nation.

54. When a Lordship title becomes vacant through death or other cause, the Royaneh women of the clan in which the title is hereditary shall hold a council and shall choose one from among their sons to fill the office made vacant. Such a candidate shall not be the father of any Confederate Lord. If the choice is unanimous the name is referred to the men relatives of the clan. If they should disapprove it shall be their duty to select a candidate from among their own number. If then the men and women are unable to decide which of the two candidates shall be named, then the matter shall be referred to the Confederate Lords in the Clan. They shall decide which candidate shall be named. If the men and the women agree to a candidate his name shall be referred to the sister clans for confirmation. If the sister clans confirm the choice, they shall refer their action to their Confederate Lords who shall ratify the choice and present it to their cousin Lords, and if the cousin Lords confirm the name then the candidate shall be installed by the proper ceremony for the conferring of Lordship titles.

Official Symbolism

55. A large bunch of shell strings, in the making of which the Five Nations Confederate Lords have equally contributed, shall symbolize the completeness of the union and certify the pledge of the nations represented by the Confederate Lords of the Mohawk, the Oneida, the Onondaga, the Cayuga and the Seneca, that all are united and formed into one body or union called the Union of the Great Law, which they have established.

A bunch of shell strings is to be the symbol of the council fire of the Five Nations Confederacy. And the Lord whom the council of Fire Keepers shall appoint to speak for them in opening the council shall hold the strands of shells in his hands when speaking. When he finishes speaking he shall deposit the strings on an elevated place (or pole) so that all the assembled Lords and the people may see it and know that the council is open and in progress.

When the council adjourns the Lord who has been appointed by his comrade Lords to close it shall take the strands of shells in his hands and address the assembled Lords. Thus will the council adjourn until such time and place as appointed by the council. Then shall the shell strings be placed in a place for safekeeping.

Every five years the Five Nations Confederate Lords and the people shall assemble together and shall ask one another if their minds are still in the same spirit of unity for the Great Binding Law and if any of the Five Nations shall not pledge continuance and steadfastness to the pledge of unity then the Great Binding Law shall dissolve.

56. Five strings of shell tied together as one shall represent the Five Nations. Each string shall represent one territory and the whole a completely united territory known as the Five Nations Confederate territory.

57. Five arrows shall be bound together very strong and each arrow shall represent one nation. As the five arrows are strongly bound this shall symbolize the complete union of the nations. Thus are the Five Nations united completely and enfolded together, united into one head, one body and one mind. Therefore they shall labor, legislate and council together for the interest of future generations.

The Lords of the Confederacy shall eat together from one bowl the feast of cooked beaver's tail. While they are eating they are to use no sharp utensils for if they should they might accidentally cut one another and bloodshed would follow. All measures must be taken to prevent the spilling of blood in any way.

58. There are now the Five Nations Confederate Lords standing with joined hands in a circle. This signifies and provides that should any one of the Confederate Lords leave the council and this Confederacy his crown of deer's horns, the emblem of his Lordship title, together with his birthright, shall

lodge on the arms of the Union Lords whose hands are so joined. He forfeits his title and the crown falls from his brow but it shall remain in the Confederacy.

A further meaning of this is that if any time any one of the Confederate Lords choose to submit to the law of a foreign people he is no longer in but out of the Confederacy, and persons of this class shall be called "They have alienated themselves." Likewise such persons who submit to laws of foreign nations shall forfeit all birthrights and claims on the Five Nations Confederacy and territory.

You, the Five Nations Confederate Lords, be firm so that if a tree falls on your joined arms it shall not separate or weaken your hold. So shall the strength of the union be preserved.

59. A bunch of wampum shells on strings, three spans of the hand in length, the upper half of the bunch being white and the lower half black, and formed from equal contributions of the men of the Five Nations, shall be a token that the men have combined themselves into one head, one body and one thought, and it shall also symbolize their ratification of the peace pact of the Confederacy, whereby the Lords of the Five Nations have established the Great Peace.

The white portion of the shell strings represent the women and the black portion the men. The black portion, furthermore, is a token of power and authority vested in the men of the Five Nations.

This string of wampum vests the people with the right to correct their erring Lords. In case a part or all the Lords pursue a course not vouched for by the people and heed not the third warning of their women relatives, then the matter shall be taken to the General Council of the women of the Five Nations. If the Lords notified and warned three times fail to heed, then the case falls into the hands of the men of the Five Nations. The War Chiefs shall then, by right of such power and authority, enter the open council to warn the Lord or Lords to return from the wrong course. If the Lords heed the warning they shall say, "we will reply tomorrow." If then an answer is returned in favor of justice and in accord with this Great Law, then the Lords shall individually pledge themselves again by again furnishing the necessary shells for the pledge. Then shall the War Chief or Chiefs exhort the Lords urging them to be just and true.

Should it happen that the Lords refuse to heed the third warning, then two courses are open: either the men may decide in their council to depose the Lord or Lords or to club them to death with war clubs. Should they in their council decide to take the first course the War Chief shall address the Lord or Lords, saying: "Since you the Lords of the Five Nations have refused to return to the procedure of the Constitution, we now declare your seats vacant, we take off your horns, the token of your Lordship, and others shall be chosen and installed in your seats, therefore vacate your seats."

Should the men in their council adopt the second course, the War Chief shall order his men to enter the council, to take positions beside the Lords, sitting between them wherever possible. When this is accomplished the War Chief holding in his outstretched hand a bunch of black wampum strings shall say to the erring Lords: "So now, Lords of the Five United Nations, harken to these last words from your men. You have not heeded the warnings of the women relatives, you have not heeded the warnings of the General Council of women and you have not heeded the warnings of the men of the nations, all urging you to return to the right course of action. Since you are determined to resist and to withhold justice from your people there is only one course for us to adopt." At this point the War Chief shall let drop the bunch of black wampum and the men shall spring to their feet and club the erring Lords to death. Any erring Lord may submit before the War Chief lets fall the black wampum. Then his execution is withheld.

The black wampum here used symbolizes that the power to execute is buried but that it may be raised up again by the men. It is buried but when occasion arises they may pull it up and derive their power and authority to act as here described.

60. A broad dark belt of wampum of thirty-eight rows, having a white heart in the center, on either side of which are two white squares all connected with the heart by white rows of beads shall be the emblem of the unity of the Five Nations.

The first of the squares on the left represents the Mohawk nation and its territory; the second square on the left and the one near the heart, represents the Oneida nation and its territory; the white heart in the middle represents the Onondaga nation and its territory, and it also means that the heart of the Five Nations is single in its loyalty to the Great Peace, that the Great Peace is lodged in the heart (meaning the Onondaga Lords), and that the Council Fire is to burn there for the Five Nations, and further, it means that the authority is given to advance the cause of peace whereby hostile nations out of the Confederacy shall cease warfare; the white square to the right of the heart represents the Cayuga nation and its territory and the fourth and last white square represents the Seneca nation and its territory.

White shall here symbolize that no evil or jealous thoughts shall creep into the minds of the Lords while in Council under the Great Peace. White, the emblem of peace, love, charity and equity surrounds and guards the Five Nations.

61. Should a great calamity threaten the generations rising and living of the Five United Nations, then he who is able to climb to the top of the Tree of the Great Long Leaves may do so. When, then, he reaches the top of the tree he shall look about in all directions, and, should he see that evil things indeed are approaching, then he shall call to the people of the Five United Nations assembled beneath the Tree of the Great Long Leaves and say: "A calamity threatens your happiness."

Then shall the Lords convene in council and discuss the impending evil.

When all the truths relating to the trouble shall be fully known and found to be truths, then shall the people seek out a Tree of Ka-hon-ka-ah-go-nah, [a great swamp Elm], and when they shall find it they shall assemble their heads together and lodge for a time between its roots. Then, their labors being finished, they may hope for happiness for many days after.

62. When the Confederate Council of the Five Nations declares for a reading of the belts of shell calling to mind these laws, they shall provide for the reader a specially made mat woven of the fibers of wild hemp. The mat shall not be used again, for such formality is called the honoring of the importance of the law.

63. Should two sons of opposite sides of the council fire agree in a desire to hear the reciting of the laws of the Great Peace and so refresh their

memories in the way ordained by the founder of the Confederacy, they shall notify Adodarho. He then shall consult with five of his coactive Lords and they in turn shall consult with their eight brethren. Then should they decide to accede to the request of the two sons from opposite sides of the Council Fire, Adodarho shall send messengers to notify the Chief Lords of each of the Five Nations. Then they shall despatch their War Chiefs to notify their brother and cousin Lords of the meeting and its time and place.

When all have come and have assembled, Adodarhoh, in conjunction with his cousin Lords, shall appoint one Lord who shall repeat the laws of the Great Peace. Then shall they announce who they have chosen to repeat the laws of the Great Peace to the two sons. Then shall the chosen one repeat the laws of the Great Peace.

64. At the ceremony of the installation of Lords if there is only one expert speaker and singer of the law and the Pacification Hymn to stand at the council fire, then when this speaker and singer has finished addressing one side of the fire he shall go to the opposite side and reply to his own speech and song. He shall thus act for both sides of the fire until the entire ceremony has been completed. Such a speaker and singer shall be termed the "Two Faced" because he speaks and sings for both sides of the fire.

65. I, Deganawidah, and the Union Lords, now uproot the tallest pine tree and into the cavity thereby made we cast all weapons of war. Into the depths of the earth, down into the deep under-earth currents of water flowing to unknown regions we cast all the weapons of strife. We bury them from sight and we plant again the tree. Thus shall the Great Peace be established and hostilities shall no longer be known between the Five Nations but peace to the United People.

Laws of Adoption

66. The father of a child of great comeliness, learning, ability or specially loved because of some circumstance may, at the will of the child's clan, select a name from his own (the father's) clan and bestow it by ceremony, such as is provided. This naming shall be only temporary and shall be called, "A name hung about the neck."

67. Should any person, a member of the Five Nations' Confederacy, specially esteem a man or woman of another clan or of a foreign nation, he may choose a name and bestow it upon that person so esteemed. The naming shall be in accord with the ceremony of bestowing names. Such a name is only a temporary one and shall be called "A name hung about the neck." A short string of shells shall be delivered with the name as a record and a pledge.

68. Should any member of the Five Nations, a family or person belonging to a foreign nation submit a proposal for adoption into a clan of one of the Five Nations, he or they shall furnish a string of shells, a span in length, as a pledge to the clan into which he or they wish to be adopted. The Lords of the nation shall then consider the proposal and submit a decision.

69. Any member of the Five Nations who through esteem or other feeling wishes to adopt an individual, a family or number of families may offer adoption to him or them and if accepted the matter shall be brought to the attention of the Lords for confirmation and the Lords must confirm adoption.

70. When the adoption of anyone shall have been confirmed by the Lords of the Nation, the Lords shall address the people of their nation and say: "Now you of our nation, be informed that such a person, such a family or such families have ceased forever to bear their birth nation's name and have buried it in the depths of the earth. Henceforth let no one of our nation ever mention the original name or nation of their birth. To do so will be to hasten the end of our peace.

Laws of Emigration

71. When any person or family belonging to the Five Nations desires to abandon their birth nation and the territory of the Five Nations, they shall inform the Lords of their nation and the Confederate Council of the Five Nations shall take cognizance of it.

72. When any person or any of the people of the Five Nations emigrate and reside in a region distant from the territory of the Five Nations Confederacy, the Lords of the Five Nations at will may send a messenger carrying a broad belt of black shells and when the messenger arrives he shall call the people together or address them personally displaying the belt of shells and they shall know that this is an order for them to return to their original homes and to their council fires.

Rights of Foreign Nations

73. The soil of the earth from one end of the land to the other is the property of the people who inhabit it. By birthright the Ongwehonweh (Original beings) are the owners of the soil which they own and occupy and none other may hold it. The same law has been held from the oldest times.

The Great Creator has made us of the one blood and of the same soil he made us and as only different tongues constitute different nations he established different hunting grounds and territories and made boundary lines between them.

74. When any alien nation or individual is admitted into the Five Nations the admission shall be understood only to be a temporary one. Should the person or nation create loss, do wrong or cause suffering of any kind to endanger the peace of the Confederacy, the Confederate Lords shall order one of their war chiefs to reprimand him or them and if a similar offence is again committed the offending party or parties shall be expelled from the territory of the Five United Nations.

75. When a member of an alien nation comes to the territory of the Five Nations and seeks refuge and permanent residence, the Lords of the Nation to which he comes shall extend hospitality and make him a member of the nation. Then shall he be accorded equal rights and privileges in all matters except as after mentioned.

76. No body of alien people who have been adopted temporarily shall have a vote in the council of the Lords of the Confederacy, for only they who have been invested with Lordship titles may vote in the Council. Aliens have nothing by blood to make claim to a vote and should they have it, not knowing all the traditions of the Confederacy, might go against its Great Peace. In this manner the Great Peace would be endangered and perhaps be destroyed.

77. When the Lords of the Confederacy decide to admit a foreign nation and an adoption is made, the Lords shall inform the adopted nation that its admission is only temporary. They shall also say to the nation that it must never try to control, to interfere with or to injure the Five Nations nor disregard the Great Peace or any of its rules or customs. That in no way should they cause disturbance or injury. Then should the adopted nation disregard these injunctions, their adoption shall be annulled and they shall be expelled.

The expulsion shall be in the following manner: The council shall appoint one of their War Chiefs to convey the message of annulment and he shall say, "You (naming the nation) listen to me while I speak. I am here to inform you again of the will of the Five Nations' Council. It was clearly made known to you at a former time. Now the Lords of the Five Nations have decided to expel you and cast you out. We disown you now and annul your adoption. Therefore you must look for a path in which to go and lead away all your people. It was you, not we, who committed wrong and caused this sentence of annulment. So then go your way and depart from the territory of the Five Nations and from the Confederacy."

78. Whenever a foreign nation enters the Confederacy or accepts the Great Peace, the Five Nations and the foreign nation shall enter into an agreement and compact by which the foreign nation shall endeavor to persuade other nations to accept the Great Peace.

Rights and Powers of War

79. Skanawatih shall be vested with a double office, duty and with double authority. One-half of his being shall hold the Lordship title and the other half shall hold the title of War Chief. In the event of war he shall notify the five War Chiefs of the Confederacy and command them to prepare for war and have their men ready at the appointed time and place for engagement with the enemy of the Great Peace.

80. When the Confederate Council of the Five Nations has for its object the establishment of the Great Peace among the people of an outside nation and that nation refuses to accept the Great Peace, then by such refusal they bring a declaration of war upon themselves from the Five Nations. Then shall the Five Nations seek to establish the Great Peace by a conquest of the rebellious nation.

81. When the men of the Five Nations, now called forth to become warriors, are ready for battle with an obstinate opposing nation that has refused to accept the Great Peace, then one of the five War Chiefs shall be chosen by the warriors of the Five Nations to lead the army into battle. It shall be the duty of the War Chief so chosen to come before his warriors and address them. His aim shall be to impress upon them the necessity of good behavior and strict obedience to all the commands of the War Chiefs. He shall deliver an oration exhorting them with great zeal to be brave and courageous and never to be guilty of cowardice. At the conclusion of his oration he shall march forward and commence the War Song and he shall sing:

Now I am greatly surprised
And, therefore I shall use it—
The power of my War Song.
I am of the Five Nations
And I shall make supplication
To the Almighty Creator.
He has furnished this army.
My warriors shall be mighty
In the strength of the Creator.
Between him and my song they are
For it was he who gave the song
This war song that I sing!

82. When the warriors of the Five Nations are on an expedition against an enemy, the War Chief shall sing the War Song as he approaches the country of the enemy and not cease until his scouts have reported that the army is near the enemies' lines when the War Chief shall approach with great caution and prepare for the attack.

83. When peace shall have been established by the termination of the war against a foreign nation, then the War Chief shall cause all the weapons of war to be taken from the nation. Then shall the Great Peace be established and that nation shall observe all the rules of the Great Peace for all time to come.

84. Whenever a foreign nation is conquered or has by their own will accepted the Great Peace their own system of internal government may continue, but they must cease all warfare against other nations.

85. Whenever a war against a foreign nation is pushed until that nation is about exterminated because of its refusal to accept the Great Peace and if that nation shall by its obstinacy become exterminated, all their rights, property and territory shall become the property of the Five Nations.

86. Whenever a foreign nation is conquered and the survivors are brought into the territory of the Five Nations' Confederacy and placed under the Great Peace the two shall be known as the Conqueror and the Conquered. A symbolic relationship shall be devised and be placed in some symbolic position. The conquered nation shall have no voice in the councils of the Confederacy in the body of the Lords.

87. When the War of the Five Nations on a foreign rebellious nation is ended, peace shall be restored to that nation by a withdrawal of all their weapons of war by the War Chief of the Five Nations. When all the terms of peace shall have been agreed upon a state of friendship shall be established.

88. When the proposition to establish the Great Peace is made to a foreign nation it shall be done in mutual council. The foreign nation is to be persuaded by reason and urged to come into the Great Peace. If the Five Nations fail to obtain the consent of the nation at the first council a second council shall be held and upon a second failure a third council shall be held and this third council shall end the peaceful methods of persuasion. At the third council the War Chief of the Five Nations shall address the Chief of the foreign nation and request him three times to accept the Great Peace. If refusal steadfastly follows the War Chief shall let the bunch of white lake shells drop from his outstretched hand to the ground and shall bound quickly forward and club the offending chief to death. War shall thereby be declared and the War Chief shall have his warriors at his back to meet any

emergency. War must continue until the contest is won by the Five Nations.

89. When the Lords of the Five Nations propose to meet in conference with a foreign nation with proposals for an acceptance of the Great Peace, a large band of warriors shall conceal themselves in a secure place safe from the espionage of the foreign nation but as near at hand as possible. Two warriors shall accompany the Union Lord who carries the proposals and these warriors shall be especially cunning. Should the Lord be attacked, these warriors shall hasten back to the army of warriors with the news of the calamity which fell through the treachery of the foreign nation.

90. When the Five Nations' Council declares war any Lord of the Confederacy may enlist with the warriors by temporarily renouncing his sacred Lordship title which he holds through the election of his women relatives. The title then reverts to them and they may bestow it upon another temporarily until the war is over when the Lord, if living, may resume his title and seat in the Council.

91. A certain wampum belt of black beads shall be the emblem of the authority of the Five War Chiefs to take up the weapons of war and with their men to resist invasion. This shall be called a war in defense of the territory.

Treason or Secession of a Nation

92. If a nation, part of a nation, or more than one nation within the Five Nations should in any way endeavor to destroy the Great Peace by neglect or violating its laws and resolve to dissolve the Confederacy, such a nation or such nations shall be deemed guilty of treason and called enemies of the Confederacy and the Great Peace.

It shall then be the duty of the Lords of the Confederacy who remain faithful to resolve to warn the offending people. They shall be warned once and if a second warning is necessary they shall be driven from the territory of the Confederacy by the War Chiefs and his men.

Rights of the People of the Five Nations

93. Whenever a specially important matter or a great emergency is presented before the Confederate Council and the nature of the matter affects the entire body of the Five Nations, threatening their utter ruin, then the Lords of the Confederacy must submit the matter to the decision of their people and the decision of the people shall affect the decision of the Confederate Council. This decision shall be a confirmation of the voice of the people.

94. The men of every clan of the Five Nations shall have a Council Fire ever burning in readiness for a council of the clan. When it seems necessary for a council to be held to discuss the welfare of the clans, then the men may gather about the fire. This council shall have the same rights as the council of the women.

95. The women of every clan of the Five Nations shall have a Council Fire ever burning in readiness for a council of the clan. When in their opinion it seems necessary for the interest of the people they shall hold a council and their decisions and recommendations shall be introduced before the Council of the Lords by the War Chief for its consideration.

96. All the Clan council fires of a nation or of the Five Nations may unite into one general council fire, or delegates from all the council fires may be appointed to unite in a general council for discussing the interests of the people. The people shall have the right to make appointments and to delegate their power to others of their number. When their council shall have come to a conclusion on any matter, their decision shall be reported to the Council of the Nation or to the Confederate Council (as the case may require) by the War Chief or the War Chiefs.

97. Before the real people united their nations, each nation had its council fires. Before the Great Peace their councils were held. The five Council Fires shall continue to burn as before and they are not quenched. The Lords of each nation in future shall settle their nation's affairs at this council fire governed always by the laws and rules of the council of the Confederacy and by the Great Peace.

98. If either a nephew or a niece see an irregularity in the performance of the functions of the Great Peace and its laws, in the Confederate Council or in the conferring of Lordship titles in an improper way, through their War Chief they may demand that such actions become subject to correction and that the matter conform to the ways prescribed by the laws of the Great Peace.

Religious Ceremonies Protected

99. The rites and festivals of each nation shall remain undisturbed and shall continue as before because they were given by the people of old times as useful and necessary for the good of men.

100. It shall be the duty of the Lords of each brotherhood to confer at the approach of the time of the Midwinter Thanksgiving and to notify their people of the approaching festival. They shall hold a council over the matter and arrange its details and begin the Thanksgiving five days after the moon of Dis-konah is new. The people shall assemble at the appointed place and the nephews shall notify the people of the time and place. From the beginning to the end the Lords shall preside over the Thanksgiving and address the people from time to time.

101. It shall be the duty of the appointed managers of the Thanksgiving festivals to do all that is needed for carrying out the duties of the occasions.

The recognized festivals of Thanksgiving shall be the Midwinter Thanksgiving, the Maple or Sugar-making Thanksgiving, the Raspberry Thanksgiving, the Strawberry Thanksgiving, the Cornplanting Thanksgiving, the Corn Hoeing Thanksgiving, the Little Festival of Green Corn, the Great Festival of Ripe Corn and the complete Thanksgiving for the Harvest.

Each nation's festivals shall be held in their Long Houses.

102. When the Thanksgiving for the Green Corn comes the special managers, both the men and women, shall give it careful attention and do their duties properly.

103. When the Ripe Corn Thanksgiving is celebrated the Lords of the Nation must give it the same attention as they give to the Midwinter Thanksgiving.

104. Whenever any man proves himself by his good life and his knowledge of good things, naturally fitted as a teacher of good things, he shall be recognized by the Lords as a teacher of peace and religion and the people shall hear him.

The Installation Song

105. The song used in installing the new Lord of the Confederacy shall be sung by Adodarhoh and it shall be:

Haii, haii Agwah wi-yoh
" " A-kon-he-watha
" " Ska-we-ye-se-go-wah
" " Yon-gwa-wih
" " Ya-kon-he-wa-tha
Haii, haii It is good indeed
" " [That] a broom,—
" " A great wing,
" " It is given me
" " For a sweeping instrument.

106. Whenever a person properly entitled desires to learn the Pacification Song he is privileged to do so but he must prepare a feast at which his teachers may sit with him and sing. The feast is provided that no misfortune may befall them for singing the song on an occasion when no chief is installed.

Protection of the House

107. A certain sign shall be known to all the people of the Five Nations which shall denote that the owner or occupant of a house is absent. A stick or pole in a slanting or leaning position shall indicate this and be the sign. Every person not entitled to enter the house by right of living within it upon seeing such a sign shall not approach the house either by day or by night but shall keep as far away as his business will permit.

Funeral Addresses

108. At the funeral of a Lord of the Confederacy, say: "Now we become reconciled as you start away. You were once a Lord of the Five Nations' Confederacy and the United People trusted you. Now we release you for it is true that it is no longer possible for us to walk about together on the earth. Now, therefore, we lay it [the body] here. Here we lay it away. Now then we say to you, 'Persevere onward to the place where the Creator dwells in peace. Let not the things of the earth hinder you. Let nothing that transpired while yet you lived hinder you. In hunting you once took delight; in the game of Lacrosse you once took delight and in the feasts and pleasant occasions your mind was amused, but now do not allow thoughts of these things to give you trouble. Let not your relatives hinder you and also let not your friends and associates trouble your mind. Regard none of these things.'"

"Now then, in turn, you here present who were related to this man and you who were his friends and associates, behold the path that is yours also! Soon we ourselves will be left in that place. For this reason hold yourselves in restraint as you go from place to place. In your actions and in your conversation do no idle thing. Speak not idle talk neither gossip. Be careful of this and speak not and do not give way to evil behavior. One year is the time that you must abstain from unseemly levity but if you can not do this for ceremony, ten days is the time to regard these things for respect."

109. At the funeral of a War Chief, say:

"Now we become reconciled as you start away. You were once a War Chief of the Five Nations' Confederacy and the United People trusted you as their guard from the enemy." (The remainder is the same as the address at the funeral of a Lord.)

110. At the funeral of a Warrior, say:

"Now we become reconciled as you start away. Once you were a devoted provider and protector of your family and you were ever ready to take part in battles for the Five Nations' Confederacy. The United People trusted you." (The remainder is the same as the address at the funeral of a Lord.)

111. At the funeral of a young man, say:

"Now we become reconciled as you start away. In the beginning of your career you are taken away and the flower of your life is withered away." (The remainder is the same as the address at the funeral of a Lord.)

112. At the funeral of a chief woman, say:

"Now we become reconciled as you start away. You were once a chief woman in the Five Nations' Confederacy. You once were a mother of the nations. Now we release you for it is true that it is no longer possible for us to walk about together on the earth. Now, therefore, we lay it [the body] here. Here we lay it away. Now then we say to you, 'Persevere onward to the place where the Creator dwells in peace. Let not the things of the earth hinder you. Let nothing that transpired while you lived hinder you. Looking after your family was a sacred duty and you were faithful. You were one of the many joint heirs of the Lordship titles. Feastings were yours and you had pleasant occasions....'" (The remainder is the same as the address at the funeral of a Lord.)

113. At the funeral of a woman of the people, say:

"Now we become reconciled as you start away. You were once a woman in the flower of life and the bloom is now withered away. You once held a sacred position as a mother of the nation ... (etc.) Looking after your family was a sacred duty and you were faithful. Feastings ... (etc.)" [The remainder is the same as the address at the funeral of a Lord.]

114. At the funeral of an infant or young woman, say:

"Now we become reconciled as you start away. You were a tender bud and gladdened our hearts for only a few days. Now the bloom has withered away ... (etc.). Let none of the things that transpired on earth hinder you. Let nothing that happened while you lived hinder you." [The remainder is the same as the address at the funeral of a Lord.]

115. When an infant dies within three days, mourning shall continue only five days. Then shall you gather the little boys and girls at the house of mourning and at the funeral feast a speaker shall address the children and bid them be happy once more, though by a death, gloom has been cast over them. Then shall the black clouds roll away and the sky shall show blue once more. Then shall the children be again in sunshine.

116. When a dead person is brought to the burial place, the speaker on the opposite side of the Council Fire shall bid the bereaved family cheer their minds once again and rekindle their hearth fires in peace, to put their house in order and once again be in brightness for darkness has covered them. He shall say that the black clouds shall roll away and that the bright blue sky is visible once more. Therefore shall they be in peace in the sunshine again.

117. Three strings of shell one span in length shall be employed in addressing the assemblage at the burial of the dead. The speaker shall say:

"Hearken you who are here, this body is to be covered. Assemble in this place again ten days hence for it is the decree of the Creator that mourning shall cease when ten days have expired. Then shall a feast be made."

Then at the expiration of ten days the speaker shall say: "Continue to listen you who are here. The ten days of mourning have expired and your minds must now be freed of sorrow as before the loss of a relative. The relatives have decided to make a little compensation to those who have assisted at the funeral. It is a mere expression of thanks. This is to the one who did the cooking while the body was lying in the house. Let her come forward and receive this gift and be dismissed from the task." In substance this shall be repeated for every one who assisted in any way until all have been remembered.

A Call for English Colonization of America (1584)

At the request of Sir Walter Raleigh, Richard Hakluyt presented a compelling case to Queen Elizabeth I, English merchants, and the gentry to invest in the colonization of America. The following are selections from the final chapter of Hakluyt's *Discourse Concerning Western Planting*.

1. The soil yieldth and may be made to yield all the several commodities of Europe, and of all kingdomes, dominions, and territories that England tradeth with that by trade of merchandise cometh into this realm.

2. The passage thither and home is neither to long nor to short but easy and to be made twice in the year....

5. And where England now for certain hundreth years last passed, by the peculiar commodity of wools, and of later years by clothing of the same, hath raised itself from meaner state to great wealth and much high honour, mighty and power than before, to the equaling of the princes of the same to the greatst potentates of this part of the world it cometh now so to passe, that by the great endeavour of the increase of the trade of wools in Spain and in the West Indies, now daily more and more multiplying that the wools of England, and the clothe made of the same, will become base, and every day more base then other; which, prudently weighed yet behoveth this realm if it mean not to return to former olde means and baseness but to stand in present and late former honour, glory, and force, and not negligently and sleepingly to slide into beggery, to foresee and to plant at Norumbega [New England] or some like place, were it not for any thing else but for the hope of the vent of our wool endraped, the principal and in effect the only enriching continuing natural commodity of this realm. And effectually pursuing that course, we shall not only find on that tract of land, and especially in that firm northward (to whom warm clothe shall be right welcome), an ample vent, but also shall, from the north side of that firm, find out known and unknown islands and dominions replenished with people that may fully vent the abundance of that our commodity, that else will in few years wax of none or of small value by foreign abundance &c.; so as by this enterprise we shall shun the imminent mischief hanging over our heads that else must needs fall upon the realm without breach of peace or sword drawn against this realm by any foreign state; and not offer our ancient riches to scornful neighbors at home, nor sell the same in effect for nothing, as we shall shortly, if presently it be not provided for....

6. This enterprise may stay the Spanish King from flowing over all the face of that waste firm of America, if we seat and plant there in time, in time I say, and we by planting shall [prevent] him from making more short and more safe returns out of the noble ports of the purposed places of our planting, then by any possibility he can from the part of the firm that now his navys by ordinary courses come from, in this that there is no comparison between the ports of the coasts that the King of Spain doth now possess and use and the ports of the coasts that our nation is to possess by planting at Norumbega.... And England possessing the purposed place of planting, her Majesty may, by the benefit of the seat having won good and royall havens, have plenty of excellent trees for request masts of goodly timber to build ships and to make great navys, of pitch, tar, hemp, and all things incident for a navy royall, and that for no price, and without money for. How easy a matter may yet be to this realm, swarming at this day with valiant youths, rusting and hurtful by lack of employment, and having good makers of cable and of all sorts of cordage, and the best and most cunning shipwrights of the world, to be lords of all those seas, and to spoil Phillip's Indian navy, and to deprive him of yearly passage of his treasure into Europe, and consequently to abate the pride of Spain and of the supporter of the great Anti-Christ of Rome and to pull him down in equality to his neighbour princes, and consequently to cut of the common mischiefs that come to all Europe by the peculiar abundance of his Indian treasure, and this without difficulty.

7.... this realm shall have by that mean ships of great burden and of great strength for the defense of this realm, and for the defense of that new seat as

need shall require, and with all great increase of perfect seamen, which great princes in time of wars want, and which kind of men are neither nourished in few days nor in few years....

10. No foreign commodity that comes into England comes without payment of custom once, twice, or thrice, before it come into the realm, and so all foreign commodities become dearer to the subjects of this realm; and by this course to Norumbega foreign princes customs are avoided; and the foreign commodities cheaply purchased, they become cheap to the subjects of England, to the common benefit of the people, and to the saving of great treasure in the realm; whereas now the realm become the poor by the purchasing of foreign commodities in so great a mass at so excessive prices.

11. At the first traffic with the people of those parts, the subjects of this realm for many years shall change many cheap commodities of these parts for things of high valor there not esteemed; and this to the great enriching of the *realm*, if common use fail not.

12. By the great plenty of those regions the merchants and their factors shall lie there cheap, buy and repair their ships cheap, and shall return at pleasure without stay or restraint of foreign prince; whereas upon stays and restraints the merchant raiseth his charge in sale over of his ware; and, buying his wares cheap, he may maintain trade with small stock, and without taking up money upon interest; and so he shall be rich and not subject to many hazards, but shall be able to afford the commodities for cheap prices to all subjects of the realm.

13. By making of ships and by preparing of things for the same, by making of cables and cordage, by planting of vines and olive trees, and by making of wine and oil, by husbandry, and by thousands of things there to be done, infinite numbers of the English nation may be set on work, to the unburdening of the realm with many that now live chargeable to the state at home.

14. If the sea coast serve for making of salt, and the inland for wine, oils, oranges, lemons, figs, &c., and for making of iron, all which with much more is hoped, without sword drawn, we shall cut the comb of the French, of the Spanish, of the Portugal, and of enemies, and of doubtful friends, to the abating of their wealth and force, and to the great saving of the wealth of the realm....

16. Wee shall by planting there enlarge the glory of the gospel, and from England plant sincere religion, and provide a safe and a sure place to receive people from all parts of the world that are forced to flee for the truth of God's word.

17. If frontier wars there chance to arise, and if thereupon we shall fortify, yet will occasion the training up of our youth in the discipline of war, and make a number fit for the service of the wars and for the defense of our people there and at home.

18. The Spaniards govern in the Indies with all pride and tyranny; and like as when people of contrary nature at the sea enter into gallies, where men are tied as slaves, all yell and cry with one voice, *Liberta, liberta*, as desirous of liberty and freedom, so no doubt whensoever the Queen of England, a prince of such clemency, shall seat upon that firm of America, and shall be reported throughout all that tract to use the natural people there with all humanity, curtesy, and freedom, they will yield themselves to her government, and revolt clean from the Spaniard, and specially when they shall understand that she hath a noble navy, and that she aboundeth with a people most valiant for their defense. And her Majesty having Sir Frances Drake and other subjects already in credit with the Symerons, a people or great multitude already revolted from the Spanish government, she may with them and a few hundreths of this nation, trained up in the late wars of France and Flanders, bring great things to pass, and that with great ease; and this brought so about, her Majesty and her subjects may both enjoy the treasure of the mines of gold and silver, and the whole trade and all the gain of the trade of merchandise, that now passeth thither by the Spaniards only hand, of all the commodities of Europe; which trade of merchandise only were of it self sufficient (without the benefit of the rich mine) to enrich the subjects, and by customs to fill her Majesty's coffers to the full. And if it be high policy to maintain the poor people of this realm in work, I dare affirm that if the poor people of England were five times so many as they be, yet all might be set on work in and by working linen, and such other things of merchandise as the trade into the Indies doth require.

19. The present short trades causeth the mariner to be cast of, and often to be idle, and so by poverty to fall to piracy. But this course to Norumbega being longer, and a continuance of the employment of the mariner, doth keep the mariner from idleness and from necessity; and so it cutteth of the principal actions of piracy, and the rather because no riche pray for them to take cometh directly in their course or any thing near their course.

20. Many men of excellent wits and of divers singular gifts, overthrown by ... some folly of youth, that are not able to live in England, may there be raised again, and do their country good service; and many needful uses there may (to great purpose) require the saving of great numbers, that for trifles may otherwise be devoured by the gallows.

21. Many soldiers and servitors, in the end of the wars, that might be hurtful to this *realm*, may there be unladen, to the common profit and quiet of this *realm*, and to our foreign benefi[t] there, as they may be employed.

22. The frye [children] of the wandering beggars of England, that grow up idly, and hurtful and burdensome to this *realm*, may there be unladen, better bred up, and may people waste countries to the home and foreign benefit, and to their own more happy state.

23. If England cry out and affirm, that there is so many in all trades that one cannot live for another, as in all places they doe, this Norumbega (if it be thought so good) offereth the remedy.

The Jamestown Settlement (1607–1609)

The Jamestown Company sent three ships to Virginia in 1607 to found the Jamestown Colony, the first permanent English settlement in America. This

account, by Captain John Smith and others, records the difficult early years of the colony, describing the sickness and near starvation of the settlers, the squabbling among the leadership, and encounters with Native Americans. Only the arrival of new settlers and supplies in 1610 saved the colony from failing.

The occasion of sickness.

Being thus left to our fortunes, it fortuned that within ten dayes scarce ten amongst us could either goe, or well stand, such extreame weaknes and sicknes oppressed us. And thereat none need marvaile, if they consider the cause and reason, which was this; whilst the ships stayed, our allowance was somewhat bettered, by a daily proportion of Bisket, which the sailers would pilfer to sell, give, or exchange with us, for money, Saxefras, fures, or love. But when they departed, there remained neither taverne, beere house, nor place of reliefe, but the common Kettell. Had we beene as free from all sinnes as gluttony, and drunkennesse, we might have beene canonized for Saints; But our President would never have beene admitted, for ingrossing to his private, Oatmeale, Sacke, Oyle, Aquavitæ, Beefe, Egges, or what not, but the Kettell; that indeed he allowed equally to be distributed, and that was halfe a pint of wheat, and as much barley boyled with water for a man a day, and this having fryed some 26. weekes in the ships hold, contained as many wormes as graines; so that we might truly call it rather so much bran then corne, our drinke was water, our lodgings Castles in the ayre: with this lodging and dyet, our extreame toile in bearing and planting Pallisadoes, so strained and bruised us, and our continuall labour in the extremitie of the heat had so weakned us, as were cause sufficient to have made us as miserable in our native Countrey, or any other place in the world. From May, to September, those that escaped, lived upon Sturgeon, and Sea-crabs, fiftie in this time we buried, the rest seeing the Presidents projects to escape these miseries in our Pinnace by flight (who all this time had neither felt want nor sicknes) so moved our dead spirits, as we deposed him; and established Ratcliffe in his place, (Gosnoll being, dead) Kendall deposed, Smith newly recovered, Martin and Ratcliffe was by his care preserved and relieved, and the most of the souldiers recovered, with the skilfull diligence of Mr. Thomas Wotton our Chirurgian generall. But now was all our provision spent, the Sturgeon gone, all helps abandoned, each houre expecting the fury of the Salvages; when God the patron of all good indevours, in that desperate extremitie so changed the hearts of the Salvages, that they brought such plenty of their fruits, and provision, as no man wanted.

A bad President. Plentie unexpected.

And now where some affirmed it was ill done of the Councell to send forth men so badly provided, this incontradictable reason will shew them plainly they are too ill advised to nourish such ill conceits; first, the fault of our going was our owne, what could be thought fitting or necessary we had, but what we should find, or want, or where we should be, we were all ignorant, and supposing to make our passage in two moneths, with victuall to live, and the advantage of the spring to worke; we were at Sea five moneths, where we both spent our victuall and lost the opportunitie of the time, and season to plant, by the unskillfull presumption of our ignorant transporters, that understood not at all, what they undertooke.

Such actions have ever since the worlds beginning beene subject to such accidents, and every thing of worth is found full of difficulties, but nothing so difficult as to establish a Common wealth so farre remote from men and meanes, and where mens mindes are so untoward as neither doe well themselves, nor suffer others. But to proceed.

The building of James Towne.

The new President and Martin, being little beloved, of weake judgement in dangers, and lesse industrie in peace, committed the managing of all things abroad to Captaine Smith: who by his owne example, good words, and faire promises, set some to mow, others to binde thatch, some to build houses, others to thatch them, himselfe alwayes bearing the greatest taske for his owne share, so that in short time, he provided most of them lodgings, neglecting any for himselfe. This done, seeing the Salvages superfluitie beginne to decrease (with some of his workemen) shipped himselfe in the Shallop to search the Country for trade. The want of the language, knowledge to mannage his boat without sailes, the want of a sufficient power (knowing the multitude of the Salvages), apparell for his men, and other necessities, were infinite impediments, yet no discouragement. Being but six or seaven in company he went downe the river to Kecoughtan, where at first they scorned him, as a famished man, and would in derision offer him a handfull of Corne, a peece of bread, for their swords and muskets, and such like proportions also for their apparell. But seeing by trade and courtesie there was nothing, to be had, he made bold to try such conclusions as necessitie inforced, though contrary to his Commission: Let fly his muskets, ran his boat on shore, whereat they all fled into the woods. So marching towards their houses, they might see great heapes of corne: much adoe he had to restrain his hungry souldiers from present taking of it, expecting as it hapned that the Salvages would assault them, as not long after they did with a most hydeous noyse. Sixtie or seaventie of them, some blacke, some red, some white, some party-coloured, came in a square order, singing and dauncing out of the woods, with their Okee (which was an Idoll made of skinnes, stuffed with mosse, all painted and hung with chaines and copper) borne before them: and in this manner being well armed, with Clubs, Targets, Bowes and Arrowes, they charged the English, that so kindly received them with their muskets loaden with Pistoll shot, that downe fell their God, and divers lay sprauling on the ground; the rest fled againe to the woods, and ere long sent one of their Quiyoughkasoucks to offer peace, and redeeme their Okee. Smith told them, if onely six of them would come unarmed and loade his boat, he would not only be their friend, but restore them their Okee, and give them Beads, Copper, and Hatchets besides: which on both sides was to their contents performed: and then they brought him Venison, Turkies, wild foule, bread, and what they had, singing and dauncing in signe of friendship till they departed. In his returne he discovered the Towne and Country of Warraskoyack.

Thus God unboundlesse by his power,
Made them thus kind, would us devour.

Amoris, a Salvage his best friend slaine for loving us. The Discovery of Chickahamine.

Smith perceiving (notwithstanding their late miserie) not any regarded but from hand to mouth (the company being well recovered) caused the Pinnace to be provided with things fitting to get provision for the yeare following; but in the interim he made 3 or 4 journies and discovered the people of Chickahamania: yet what he carefully provided the rest carelessly spent. Wingfield and Kendall living in disgrace, seeing all things at randome in the absence of Smith, the companies dislike of their Presidents weaknes, and their small love to Martins never mending sicknes, strengthened themselves with the sailers, and other confederates to regaine their former credit and authority, or at least such meanes aboard the Pinnace.

Another project to abandon the country.

[The pinnacle] being fitted to saile as Smith had appointed (for trade) to alter her course and to goe for England. Smith unexpectedly returning had the plot discovered to him, much trouble he had to prevent it, till with store of sakre and musket shot he forced them stay or sinke in the river, which action cost the life of captaine Kendall. These brawles are so disgustfull, as some will say they were better forgotten, yet all men of good judgement will conclude, at were better their basenes should be manifest to the world, then the busines beare the scorne and shame of their excused disorders. The President and captaine Archer not long after intended also to have abandoned the country, which project also was curbed, and suppressed by Smith. The Spaniard never more greedily desired gold then he victuall, nor his souldiers more to abandon the Country, then he to keepe it. But finding plentie of Corne in the river of Chickahamania where hundreds of Salvages in divers places stood with baskets expecting his comming. And now the winter approaching, the rivers became so covered with swans, geese, duckes, and cranes, that we daily feasted with good bread, Virginia pease, pumpions, and putchamins, fish, fowle, and diverse sorts of wild beasts as far as we could eate them: so that none of our Tuftaffaty humorists desired to goe for England. But our Comædies never endured long without a Tragedie; some idle exceptions being muttered against Captaine Smith, for not discovering the head of Chickahamania river, and taxed by the Councell, to be too slow in so worthy an attempt. The next voyage hee proceeded so farre that with much labour by cutting of trees in sunder he made his passage, but when his Barge could passe no farther, he left her in a broad bay out of danger of shot, commanding none should goe a shore till his returne: himselfe with two English and two Salvages went up higher in a Canowe, but hee was not long absent, but his men went a shore, whose want of government, gave both occasion and opportunity to the Salvages to surprise one George Cassen, whom they slew, and much failed not to have cut of the boat and all the rest. Smith little dreaming of that accident, being got to the marshes at the rivers head, twentie myles in the desert, had his two men slain (as is supposed) sleeping by the Canowe, whilst himselfe by fowling sought them victuall, who finding he was beset with 200 Salvages, two of them hee slew, still defending himselfe with the ayd of a Salvage his guid, whom he bound to his arme with his garters, and used him as a buckler, yet he was shot in his thigh a little, and had many arrows that stucke in his clothes but no great hurt, till at last they tooke him prisoner. When this newes came to James towne, much was their sorrow for his losse, fewe expecting what ensued. Sixe or seven weekes those Barbarians kept him prisoner, many strange triumphes and conjurations they made of him, yet hee so demeaned himselfe amongst them, as he not onely diverted them from surprising the Fort, but procured his owne libertie, and got himselfe and his company such estimation amongst them, that those Salvages admired him more then their owne Quiyouckosucks. The manner how they used and delivered him, is as followeth....

Captaine Smith taken prisoner.

The Salvages having drawne from George Cassen whether Captaine Smith was gone, prosecuting that opportunity they followed him with 300. bowmen, conducted by the King of Pamaunkee, who in divisions searching the turnings of the river, found Robinson and Emry by the fire side, those they shot full of arrowes and slew. Then finding the Captaine, as is said, that used the Salvage that was his guide as his shield (three of them being slain and divers other so gauld [galled, or wounded]) all the rest would not come neere him. Thinking thus to have returned to his boat, regarding them, as he marched, more then his way, slipped up to the middle in an oasie creeke & his Salvage with him, yet durst they not come to him till being neere dead with cold, he threw away his armes. Then according to their composition they drew him forth and led him to the fire, where his men were slaine. Diligently they chafed his benumbed limbs. He demanding for their Captaine, they shewed him Opechankanough, King of Pamaunkee, to whom he gave a round Ivory double compass Dyall. Much they marvelled at the playing of the Fly and Needle, which they could see so plainely, and yet not touch it, because of the glasse that covered them. But when he demonstrated by that Globe-like Jewell, the roundnesse of the earth, and skies, the speare of the Sunne, Moone, and Starres, and how the Sunne did chase the night round about the world continually; the greatnesse of the Land and Sea, the diversitie of Nations, varietie of complexions, and how we were to them Antipodes, and many other such like matters, they all stood as amazed with admiration. Notwithstanding, within an houre after they tyed him to a tree, and as many as could stand about him prepared to shoot him, but the King holding up the Compass in his hand, they all laid downe their Bowes and Arrowes, and in a triumphant manner led him to Orapaks, where he was after their manner kindly feasted, and well used.

The order they observed in their triumph.

Their order in conducting him was thus; Drawing themselves all in fyle, the King in the midst had all their Peeeces and Swords borne before him. Captaine Smith was led after him by three great Salvages, holding him fast by each arme: and on each side six went in fyle with their Arrowes nocked. But arriving at the Towne (which was but onely thirtie or fortie hunting houses made of Mats, which they remove as they please, as we our tents) all the women and children staring to behold him, the souldiers first all in fyle performed the forme of a Bissom so well as could be, and on each flanke, officers as Serjeants to see them keepe their orders. A good time they continued this exercise, and then cast themselves in a ring, dauncing in such severall Postures, and singing and yelling out such hellish notes and screeches; being strangely painted, every one his quiver of Arrowes, and at his backe a club; on his arme a Fox or an Otters skinne, or some such matter for his vambrace; their heads and shoulders painted red, with Oyle and Pocones mingled together, which Scarlet-like colour made an exceeding handsome shew; his Bow in his hand, and the skinne of a Bird with her wings abroad dried, tyed on his head, a peece of copper, a white shell, a long feather, with a small rattle growing at the tayles of their snaks tyed to it, or some such like toy. All this while Smith and the King stood in the midst guarded, as before is said, and after three dances they all departed. Smith they conducted to a long house, where thirtie or fortie tall fellowes did guard him, and ere long more bread and venison was brought him then would have served twentie men, I thinke his stomacke at that time was not very good; what he left they put in baskets and tyed over his head. About midnight they set the meate againe before him, all this time not one of them would eate a bit with him, till the next morning they brought him as much more, and then did they eate all the old, & reserved the new as they had done the other, which made him thinke they would fat him to eat him. Yet in this desperate estate to defend him from the cold, one Maocassater brought him his gowne, in requitall of some beads and toyes Smith had given him at his first arrivall in Virginia.

How he should have beene slaine at Orapacks.

Two dayes after a man would have slaine him (but that the guard prevented it) for the death of his sonne, to whom they conducted him to recover the poore man then breathing his last. Smith told them that at James towne he had a water would doe it, if they would let him fetch it, but they would not permit that; but made all the preparations they could to assault James towne, craving his advice, and for recompence he should have life, libertie, land, and women. In part of a Table booke he writ his minde to them at the Fort, what was intended, how they should follow that direction to affright the messengers, and without fayle send him such things as he writ for. And an Inventory with them. The difficultie and danger, he told the Salvages, of the

Mines, great-gunnes, and other Engins exceedingly affrighted them, yet according to his request they went to James towne, in as bitter weather as could be of frost and snow, and within three dayes returned with an answer.

How he saved James towne from being surprised.

But when they came to James towne, seeing men sally out as he had told them they would, they fled; yet in the night they came againe to the same place where he had told them they should receive an answer, and such things as he had promised them, which they found accordingly, and with which they returned with no small expedition, to the wonder of them all that heard it, that he could either divine, or the paper could speake: then they led him to the Youthtanunds, the Mattapanients, the Payankatanks, the Nantaughtacunds, and Onawmanients upon the rivers of Raphanock, and Patawomek, over all those rivers, and backe againe by divers other severall Nations, to the Kings habitation at Pamaunkee, where they entertained him with most strange and fearefulle Conjurations; As if neare led to hell, Amongst the Devils to dwell.

How they did Conjure him at Pamaunkee.

Not long after, early in a morning a great fire was made in a long house, and a mat spread on the one side, as on the other; on the one they caused him to sit, and all the guard went out of the house, and presently came skipping in a great grim fellow, all painted over with coale, mingled with oyle; and many Snakes and Wesels skins stuffed with mosse, and all their tayles tyed together, so as they met on the crowne of his head in a tassell; and round about the tassell was as a Coronet of feathers, the skins hanging round about his head, backe, and shoulders, and in a manner covered his face; with a hellish voyce and a rattle in his hand. With most strange gestures and passions he began his invocation, and environed the fire with a circle of meale; which done, three more such like devils came rushing in with the like antique tricks, painted halfe blacke, halfe red: but all their eyes were painted white, and some red stroakes like Mutchato's, along their cheekes: round about him those fiends daunced a pretty while, and then came in three more as ugly as the rest; with red eyes, and white stroakes over their blacke faces, at last they all sat downe right against him; three of them on the one hand of the chiefe Priest, and three on the other. Then all with their rattles began a song, which ended, the chiefe Priest layd downe five wheat cornes: then straying his armes and hands with such violence that he sweat, and his veynes swelled, he began a short Oration: at the conclusion they all gave a short groane; and then layd down three graines more. After that, began their song againe, and then another Oration, ever laying downe so many cornes as before, till they had twice incirculed the fire; that done, they tooke a bunch of little stickes prepared for that purpose, continuing still their devotion, and at the end of every song and Oration, they layd downe a sticke betwixt the divisions of Corne. Till night, neither he nor they did either eate or drinke, and then they feasted merrily, with the best provisions they could make. Three dayes they used this Ceremony; the meaning whereof they told him, was to know if he intended them well or no. The circle of meale signified their Country, the circles of corne the bounds of the Sea, and the stickes his Country. They imagined the world to be flat and round, like a trencher, and they in the midst. After this they brought him a bagge of gunpowder, which they carefully preserved till the next spring, to plant as they did their corne; because they would be acquainted with the nature of that seede.

Opitchapam the Kings brother invited him to his house, where, with as many platters of bread, foule, and wild beasts, as did environ him, he bid him wellcome; but not any of them would eate a bit with him, but put up all the remainder in Baskets. At his returne to Opechancanoughs, all the Kings women, and their children, flocked about him for their parts, as a due by Custome, to be merry with such fragments.

But his waking mind in hydeous dreames did oft see wondrous shapes,
Of bodies strange, and huge in growth, and of stupendious makes.

How Powhatan entertained him.

At last they brought him to Meronocomo, where was Powhatan their Emperour. Here more then two hundred of those grim Courtiers stood wondering at him, as he had beene a monster; till Powhatan and his trayne had put themselves in their greatest braveries. Before a fire upon a seat like a bedsted, he sat covered with a great robe, made of Rarowcun skinnies, and all the tayles hanging by. On either hand did sit a young wench of 16 or 18 yeares, and along on each side the house, two rowes of men, and behind them as many women, with all their heads and shoulders painted red; many of their heads bedecked with the white downe of Birds; but every one with something: and a great chayne of white beads about their necks. At his entrance before the King, all the people gave a great shout. The Queene of Appamatuck was appointed to bring him water to wash his hands, and another brought him a bunch of feathers, in stead of a Towell to dry them: having feasted him after their best barbarous manner they could, a long consultation was held, but the conclusion was, two great stones were brought before Powhatan: then as many as could layd hands on him, dragged him to them, and thereon laid his head, and being ready with their clubs, to beate out his braines, Pocahontas the Kings dearest daughter, when no intreaty could prevaile, got his head in her armes, and laid her owne upon his to save him from death: whereat the Emperour was contented he should live to make him hatchets, and her bells, beads, and copper; for they thought him as well of all occupations as themselves. For the King himselfe will make his owne robes, shooes, bowes, arrowes, pots; plant, hunt, or doe any thing so well as the rest.

How Pocahontas saved his life.

They say he bore a pleasant shew,
But sure his heart was sad.
For who can pleasant be, and rest,
That lives in feare and dread:
And having life suspected, doth
It still suspected lead.

How Powhatan sent him to James Towne.

Two dayes after, Powhatan having disguised himselfe in the most fearefull manner he could, caused Capt. Smith to be brought forth to a great house in the woods, and there upon a mat by the fire to be left alone. Not long after from behinde a mat that divided the house, was made the most dolefullest

noyse he ever heard; then Powhatan more like a devill then a man with some two hundred more as blacke as himselfe, came unto him and told him now they were friends, and presently he should goe to James towne, to send him two great gunnes, and a gryndstone, for which he would give him the Country of Capahowosick, and for ever esteeme him as his sonne Nantaquoud. So to James towne with 12 guides Powhatan sent him. That night they quartered in the woods, he still expecting (as he had done all this long time of his imprisonment) every houre to be put to one death or other: for all their feasting. But almightie God (by his divine providence) had mollified the hearts of those sterne Barbarians with compassion. The next morning betimes they came to the Fort, where Smith having used the Salvages with what kindnesse he could, he shewed Rawhunt, Powhatans trusty servant two demi-Culverings & a millstone to carry Powhatan: they found them somewhat too heavie; but when they did see him discharge them, being loaded with stones, among the boughs of a great tree loaded with Isickles, the ice and branches came so tumbling downe, that the poore Salvages ran away halfe dead with feare. But at last we regained some conference with them, and gave them such toyes; and sent to Powhatan, his women, and children such presents, as gave them in generall full content. Now in James Towne they were all in combustion, the strongest preparing once more to run away with the Pinnace; which ... with the hazzard of his life, with Sakre falcon and musket shot, Smith forced now the third time to stay or sinke. Some no better then they should be, had plotted with the President, the next day to have put him to death by the Leviticall law, for the lives of Robinson and Emry, pretending the fault was his that had led them to their ends: but he quickly tooke such order with such Lawyers, that he layd them by the heeles till he sent some of them prisoners for England. Now ever once in foure or five dayes, Pocahontas with her attendants, brought him so much provision, that saved many of their lives, that els for all this had starved with hunger.

Thus from numbe death our good God sent reliefe,
The sweete asswager of all other grieffe.

A true prooffe of Gods love to the action.

His relation of the plenty he had seene, especially at Werawocomoco, and of the state and bountie of Powhatan (which till that time was unknowne) so revived their dead spirits (especially the love of Pocahontas) as all mens feare was abandoned. Thus you may see what difficulties still crossed any good indeavour: and the good successe of the businesse being thus oft brought to the very period of destruction; yet you see by what strange means God hath still delivered it. As for the insufficiency of them admitted in Commission, that error could not be prevented by the Electors; there being no other choise, and all strangers to each others education, qualities, or disposition. And if any deeme it a shame to our Nation to have any mention made of those inormities, let them peruse the Histories of the Spanyards Discoveries and Plantations, where they may see how many mutinies, disorders, and dissensions have accompanied them, and crossed their attempts: which being knowne to be particular mens offences; doth take away the generall scorne and contempt, which malice, presumption, covetousnesse, or ignorance might produce; to the scandall and reproach of those, whose actions and valiant resolutions deserve a more worthy respect.

Of two evils the lesse was chosen.

Now whether it had beene better for Captaine Smith, to have concluded with any of those severall projects, to have abandoned the Countrey, with some ten or twelve of them, who were called the better sort, and have left Mr. Hunt our Preacher, Master Anthony Gosnoll, a most honest, worthy, and industrious Gentleman, Master Thomas Wotton, and some 27 others of his Countrymen to the fury of the Salvages, famine, and all manner of mischiefes, and inconveniences (for they were but fortie in all to keepe possession of this large Country); or starve himselfe with them for company, for want of lodging: or but adventuring abroad to make them provision, or by his opposition to preserve the action, and save all their lives; I leave to the censure of all honest men to consider.

But We men imagine in our Jolitie,
That 'tis all one, or good or bad to be.
But then anone wee alter this againe,
If happily wee feelee the sence of paine;
For then we're turn'd into a mourning vaine.

Written by Thomas Studley, the first Cape Merchant in Virginia, Robert Fenton, Edward Harrington, and J.S.

The Mayflower Compact (1620)

This agreement, drawn up and signed by male heads of household aboard the *Mayflower*, recognized that the new settlement would need rules by which it could be governed. As such, this civil covenant established the principle that all members of the community agreed to live in a society governed by laws established for the greater good of the majority.

IN THE NAME OF GOD, AMEN. We, whose names are underwritten, the Loyal Subjects of our dread Sovereign Lord King *James*, by the Grace of God, of *Great Britain, France, and Ireland*, King, *Defender of the Faith*, &c. Having undertaken for the Glory of God, and Advancement of the Christian Faith, and the Honour of our King and Country, a Voyage to plant the first Colony in the northern Parts of *Virginia*; Do by these Presents, solemnly and mutually, in the Presence of God and one another, covenant and combine ourselves together into a civil Body Politick, for our better Ordering and Preservation, and Furtherance of the Ends aforesaid: And by Virtue hereof do enact, constitute, and frame, such just and equal Laws, Ordinances, Acts,

Constitutions, and Officers, from time to time, as shall be thought most meet and convenient for the general Good of the Colony; unto which we promise all due Submission and Obedience.

IN WITNESS whereof we have hereunto subscribed our names at *Cape-Cod* the eleventh of November, in the Reign of our Sovereign Lord King *James*, of *England*, *France*, and *Ireland*, the eighteenth, and of *Scotland* the fifty-fourth, *Anno Domini*; 1620.

Compiled and edited under the Act of Congress of June 30, 1906, by Francis Newton Thorpe (Washington, DC: Government Printing Office, 1909).

Rights and Privileges of Patroons (1629)

The Charter of Freedoms and Exemptions for New Netherland was granted by the Dutch West India Company on June 7, 1629. It provided for the perpetual proprietorship of vast estates, called patroonships, to those members of the company founding settlements of fifty or more persons on land purchased from the Indians. In return for a pledge of loyalty to the company, patroons were given complete jurisdiction over their territory. Under the terms of this charter, a handful of patroons quickly took control of most of the Hudson River Valley, the choicest portion of New Netherland.

Disputes within the company and difficulty with the native peoples doomed the system, however, so that by 1680 only two of the original grants remained in force. The colony itself had already fallen under British control in 1664.

All such shall be acknowledged patroons of New Netherland who shall, within the space of four years next after they have given notice to any of the chambers of the Company here, or to the commander or council there, undertake to plant a colony there of fifty souls, upward of fifteen years old; one-fourth within one year, and within three years after the sending of the first, making together four years, the remainder, to the full number of fifty persons, to be shipped from hence, on pain, in case of willful neglect, of being deprived of the privileges obtained; but it is to be observed that the Company reserve the island of the Manhattes [Manhattan] to themselves.

They shall, from the time they make known the situation of the places where they propose to settle colonies, have the preference to all others of the absolute property of such lands as they have there chosen, but, in case the situation should not afterward please them, or that they have been mistaken as to the quality of the land, they may, after remonstrating concerning the same to the commander and council there, be at liberty to choose another place.

The Patroons, by virtue of their power, shall and may be permitted, at such places as they shall settle their colonies, to extend their limits four miles along the shore, that is, on one side of a navigable river, or two miles on each side of a river, and so far into the country as the situation of the occupiers will permit; providing and conditioned that the Company keep to themselves the lands lying and remaining between the limits of colonies, to dispose thereof, when and at such time as they shall think proper, in such manner that no person shall be allowed to come within seven or eight miles of them without their consent, unless the situation of the land thereabout were such that the commander and council, for good reasons, should order otherwise; always observing that the first occupiers are not to be prejudiced in the right they have obtained, other than, unless the service of the Company should require it, for the building of fortifications or something of that sort; remaining, moreover, the command of each bay, river, or island of the first-settled colony, under the supreme jurisdiction of their High Mightinesses the States General and the Company. But that, on the next colonies being settled on the same river or island, they may, in conjunction with the first, appoint one or more council in order to consider what may be necessary for the prosperity of the colonies on the said river and island.

They shall forever possess and enjoy all the lands lying within the aforesaid limits ... and, in case any one should in time prosper so much as to found

one or more cities, he shall have the power and authority to establish officers and magistrates there and to make use of the title of his colony, according to his pleasure and to the quality or the persons.

The patroons and colonists shall be privileged to send their people and effects thither in ships belonging to the Company, provided they take the oath and pay to the Company for bringing over the people.

Inasmuch as it is intended to people the island of the Manhattes first, all fruits and wares that are produced on the lands situate on the North River and lying thereabout shall, for the present, be brought there before they may be sent elsewhere; excepting such as are from their nature unnecessary there, or such as cannot, without great loss to the owner thereof be brought there; in which case the owners thereof shall be obliged to give timely notice in writing of the difficulty attending the same to the Company here, or the commander and council there, that the same may be remedied as the necessity thereof shall be found to require.

All the patroons of colonies in New Netherland and of colonies on the island of Manhattes shall be at liberty to sail and traffic all along the coast from Florida to Terra Neuf, provided that they do again return with all such goods as they shall get in trade to the island of Manhattes and pay 5 percent for recognition to the Company, in order, if possible, that, after the necessary inventory of the goods shipped be taken, the same may be sent hither....

In case the ships of the patroons, in going from Florida to Terra Neuf and no further without our grant, should overpower any of the prizes of the enemy, they shall be obliged to bring, or cause to be brought, such prize to the college of the place from whence they sailed out, in order to be rewarded by them; the Company shall keep the one-third part thereof, and the remaining two-thirds shall belong to them, in consideration of the cost and risk they have been at, all according to the orders of the Company.

It shall be also free for the aforesaid patroons to traffic and trade all along the coast of New Netherland and places circumjacent, with such goods as are consumed there, and receive in return for them all sorts of merchandise that may be had there, except beavers, otters, minks, and all sorts of peltry, which trade the Company reserve to themselves....

The Company promises the colonists of the patroons that they shall be free from customs, taxes, excise, imposts, or any other contributions for the space of ten years; and, after the expiration of the said ten years at the highest, such customs as the goods are taxable with here for the present.

They will not take from the service of the patroons any of their colonists, either man or woman, son or daughter, manservant or maidservant; and, though any of them should desire the same, they will not receive them, much less permit them to leave their patroons and enter into the service of another, unless on consent obtained from their patroons in writing; and this for and during so many years as they are bound to their patroons; after the expiration whereof, it shall be in the power of the patroons to send hither all such colonists as will not continue in their service and until then shall not enjoy their liberty. And all such colonists as shall leave the service of his patroon and enter into the service of another or shall, contrary to his contract, leave his service, we promise to do everything in our power to apprehend and deliver the same into the hands of his patroon, or attorney, that he may be proceeded against....

In regard to such private persons as on their own account, or others in the service of their masters here (not enjoying the same privileges of the patroons), shall be inclined to go thither and settle, they shall, with the approbation of the director and council there, be at liberty to take up as much land, and take possession thereof, as they shall be able properly to improve and shall enjoy the same in full property either for themselves or masters.

They shall have free liberty of hunting and fowling, as well by water as by land, generally, and in public and private woods and rivers, about their colonies, according to the orders of the director and council.

Whosoever, whether colonists of patroons for their patroons or free persons for themselves or other particulars for their masters, shall discover any shores, bays, or other fit places for erecting fisheries or the making of salt ponds, they may take possession thereof and begin to work on them in their own absolute property, to the exclusion of all others....

In case any of the colonists should, by his industry and diligence, discover any minerals, precious stones, crystals, marbles, or suchlike or any pearl fishery, the same shall be and remain the property of the patroon or patroons of such colony, giving and ordering the discoverer such premium as the patroon shall beforehand have stipulated with such colonists by contract. And the patroons shall be exempt from all recognition to the Company for the term of eight years and pay only for freight to bring them over, 2 percent, and after the expiration of the aforesaid eight years, for recognition and freight, the one-eighth part of what the same may be worth.

The Company will take all the colonists, free as well as those that are in service, under their protection and the same, against all outlandish and inlandish wars and powers, with the forces they have there, as much as lies in their power, defend.

Whosoever shall settle any colony out of the limits of the Manhattes Island shall be obliged to satisfy the Indians for the land they shall settle upon, and they may extend or enlarge the limits of their colonies if they settle a proportionate number of colonists thereon.

The patroons and colonists shall in particular, and in the speediest manner, endeavor to find out ways and means whereby they may support a minister and schoolmaster, that thus the service of God and zeal for religion may not grow cool and be neglected among them; and that they do for the first, procure a comforter of the sick there.

The colonies that shall happen to lie on the respective rivers or islands (that is to say, each river or island for itself) shall be at liberty to appoint a deputy, who shall give information to the commander and council of that Western quarter, of all things related to his colony, and who are to further matters relating thereto, of which deputies there shall be one altered, or changed, in every two years; and all colonies shall be obliged, at least once every twelve months, to make exact report of their colony and lands thereabout to the commander and council there, in order to be transmitted hither.

The colonists shall not be permitted to make any woolen, linen, or cotton cloth, nor weave any other stuffs there on pain of being banished, and as perjurers to be arbitrarily punished.

The Company will use their endeavors to supply the colonists with as many blacks as they conveniently can, on the conditions hereafter to be made; in

such manner, however, that they shall not be bound to do it for a longer time than they shall think proper.

A Modell of Christian Charity (1630)

Written by John Winthrop as he sailed to New England aboard the *Arabella*, this essay was a statement of the principles that would guide the Puritan Commonwealth. The new community offered the settlers a chance to practice their religion freely, and Winthrop saw the establishment of the colony as a divine mission. Theirs would be an inspired “city upon a hill,” which would be an example to others in the creation of a more perfect society.

Written on Board the *Arabella*, on the Atlantic Ocean.

By the Hon. John Winthrop Esqr. In his passage (with a great company of Religious people, of which Christian tribes he was the Brave Leader and famous Governor;) from the Island of Great Brittain to New-England in the North America. Anno 1630.

Christian Charitie.

A Modell hereof.

GOD ALMIGHTY in his most holy and wise providence, hath soe disposed of the condition of mankind, as in all times some must be rich, some poore, some high and eminent in power and dignitie; others mean and in submission.

The Reason hereof.

1 *Reas[on]*. First to hold conformity with the rest of his world, being delighted to show forth the glory of his wisdom in the variety and difference of the creatures, and the glory of his power in ordering all these differences for the preservation and good of the whole; and the glory of his greatness, that as it is the glory of princes to have many officers, soe this great king will have many stewards, Counting himself more honoured in dispensing his gifts to man by man, than if he did it by his owne immediate hands.

2 *Reas.* Secondly that he might have the more occasion to manifest the work of his Spirit: first upon the wicked in moderating and restraining them: soe that the riche and mighty should not eate upp the poore nor the poore and dispised rise upp against and shake off theire yoake.

2ly. In the regenerate, in exerciseing his graces in them, as in the grate ones, theire love, mercy, gentleness, temperance &c., in the poore and inferior sorte, theire faith, patience, obedience &c.

3 *Reas.* Thirdly, that every man might have need of others, and from hence they might be all knitt more nearly together in the Bonds of brotherly affection. From hence it appears plainly that noe man is made more honourable than another or more wealthy &c., out of any particular and singular respect to himselfe, but for the glory of his creator and the common good of the creature, man. Therefore God still reserves the property of these gifts to himselfe as Ezek[ial]. 16. 17. he there calls wealth, *his gold and his silver*, and Prov[erbs]. 3. 9. he claims theire service as his due, *honor the Lord with thy riches* &c.—All men being thus (by divine providence) ranked into two sorts, riche and poore; under the first are comprehended all such as are able to live comfortably by their owne meanes duely improved; and all others are poore according to the former distribution.

There are two rules whereby we are to walk one towards another: Justice and Mercy. These are always distinguished in their act and in their object, yet may they both concur in the same subject in eache respect; as sometimes there may be an occasion of showing mercy to a rich man in some sudden danger or distresse, and alsoe doing of meere justice to a poor man in regard of some perticular contract &c.

There is likewise a double Lawe by which wee are regulated in our conversation towards another; in both the former respects, the lawe of nature and the lawe of grace, or the morrall lawe or the lawe of the gospell, to omitt the rule of justice as not properly belonging to this purpose otherwise than it may fall into consideration in some perticular cases. By the first of these lawes man as he was enabled soe withall is commanded to love his neighbour as himself. Upon this ground stands all the precepts of the morrall lawe, which concernes our dealings with men. To apply this to the works of mercy; this lawe requires two things. First that every man afford his help to another in every want or distresse. Secondly, that hee performe this out of the same affection which makes him carefull of his owne goods, according to that of our Savior, *Whatsoever ye would that men should do to you* (Math.). This was practised by Abraham and Lot in entertaining the angells and the old man of Gibeon.

The lawe of Grace or of the Gospell hath some difference from the former; as in these respects, First the lawe of nature was given to man in the estate of innocency; this of the Gospell in the estate of regeneracy. 2ly, the former propounds one man to another, as the same flesh and image of God; this as a brother in Christ alsoe, and in the communion of the same Spirit, and soe teacheth to put a difference between christians and others. *Doe good to all, especially to the household of faith*; upon this ground the Israelites were to putt a difference between the brethren of such as were strangers though not of the Canaanites.

3ly. The Lawe of nature would give no rules for dealing with enemies, for all are to be considered as friends in the state of innocency, but the Gospell commands love to an enemy. Proove. *If thine Enemy hunger, feed him; Love your Enemies, doe good to them that hate you*. Math[ew]. 5. 44.

This lawe of the Gospell propounds likewise a difference of seasons and occasions. There is a time when a christian must sell all and give to the poor, as they did in the Apostles times. There is a time alsoe when christians (though they give not all yet) must give beyond their ability, as they of Macedonia,

Cor[inthians]. 2, 6. Likewise community of perills calls for extraordinary liberality, and soe doth community in some special service for the church. Lastly, when there is no other means whereby our christian brother may be relieved in his distress, we must help him beyond our ability rather than tempt God in putting him upon help by miraculous or extraordinary meanes.

This duty of mercy is exercised in the kinds, Giveing, lending and forgiving.—

Quest[ion]. What rule shall a man observe in giveing in respect of the measure?

Ans. If the time and occasion be ordinary he is to give out of his abundance. *Let him lay aside as God hath blessed him.* If the time and occasion be extraordinary, he must be ruled by them; taking this withall, that then a man cannot likely doe too much, especially if he may leave himselfe and his family under probable means of comfortable subsistence.

Object[ion]. A man must lay upp for posterity, the fathers lay upp for posterity and children, and *he is worse than an infidell that provideth not for his owne.*

Ans[wer]. For the first, it is plaine that it being spoken by way of comparison, it must be meant of the ordinary and usuall course of fathers, and cannot extend to times and occasions extraordinary. For the other place the Apostle speaks against such as walked inordinately, and it is without question, that he is worse than an infidell who through his owne sloathe and voluptuousness shall neglect to provide for his family.—

Object. *The wise man's Eyes are in his head, saith Solomon, and foreseeeth the plague;* therefore he must forecast and lay upp against evill times when he or his may stand in need of all he can gather.

Ans. This very Argument Solomon useth to persuade to liberality, Eccle[siastes].: *Cast thy bread upon the waters, and for thou knowest not what evill may come upon the land.* Luke 26. *Make you friends of the riches of iniquity;* you will ask how this shall be? Very well. For first he that gives to the poore, lends to the lord and he will repay him even in this life an hundredfold to him or his.—*The righteous is ever mercifull and lendeth and his seed enjoyeth the blessing;* and besides wee know what advantage it will be to us in the day of account when many such witnesses shall stand forth for us to witness the improvement of our tallent.

And I would know of those whoe pleade soe much for laying up for time to come, whether they holde that to be Gospell, Math[ew]. 16. 19. *Lay not upp for yourselves Treasures upon Earth &c.* If they acknowledge it, what extent will they allowe it? if only to those primitive times, let them consider the reason whereupon our Saviour groundes it. The first is that they are subject to the moathe, the rust, the theife. Secondly, They will steale away the heart; *where the treasure is there will ye heart be allsoe.* The reasons are of like force at all times.

Therefore the exhortation must be generall and perpetuall, withallwayes in respect of the love and affection to riches and in regard of the things themselves when any special service for the church or perticular Distresse of our brother doe call for the use of them; otherwise it is not only lawfull but necessary to lay upp as Joseph did to have ready upp on such occasions, as the Lord (whose stewards wee are of them) shall call for them from us; Christ gives us an Instance of the first, when hee sent his disciples for the Ass, and bids them answer the owner thus, the Lord hath need of him: soe when the Tabernacle was to be built, he sends to his people to call for their silver and gold, &c; and yeildes noe other reason but that it was for his worke. When Elisha comes to the widow of Sareptah and findes her preparing to make ready her pittance for herselfe and family, he bids her first provide for him, he challengeth first God's parte which she must first give before shee must serve her owne family.

All these teache us that the Lord looks that when hee is pleased to call for his right in any thing wee have, our owne interest wee have, must stand aside till his turne be served. For the other, wee need looke noe further then to that of John 1. *He whoe hath this world's goodes and seeth his brother to neede and shutts upp his compassion from him, how dwelleth the love of God in him,* which comes punctually to this conclusion; if thy brother be in want and thou canst help him, thou needst not make doubt, what thou shouldst doe; if thou lovest God thou must help him.

Quest. What rule must wee observe in lending?

Ans. Thou must observe whether thy brother hath present or probable or possible means of repaying thee, if there be none of those, thou must give him according to his necessity, rather then lend him as he requires; if he hath present means of repaying thee, thou art to look at him not as an act of mercy, but by way of Commerce, wherein thou arte to walk by the rule of justice; but if his means of repaying thee be only probable or possible, then is hee an object of thy mercy, thou must lend him, though there be danger of losing it, Deut[eronomy]. 15. 7. *If any of thy brethren be poore &c., thou shalt lend him sufficient.* That men might not shift off this duty by the apparent hazzard, he tells them that though the yeare of Jubile were at hand (when he must remitt it, if hee were not able to repay it before) yet he must lend him and that chearefully. *It may not grieve thee to give him* (saith hee) and because some might object, why soe I should soone impoverishe myself and my family, he adds with all thy worke &c; for our Saviour, Math[ew]. 5. 42. *From him that would borrow of thee turne not away.*

Quest. What rule must we observe in forgiving?

Ans. Whether thou didst lend by way of commerce or in mercy, if he hath nothing to pay thee, must forgive, (except in cause where thou hast a surety or a lawfull pleadge) Deut[eronomy]. 15. 2. Every seaventh yeare the Creditor was to quitt that which he lent to his brother if he were poore as appears ver[se]. 8. *Save when there shall be no poore with thee.* In all these and like cases, Christ was a generall rule, Math[ew]. 7. 22. *Whatsoever ye would that men should doe to you, doe yee the same to them allsoe.*

Quest. What rule must wee observe and walke by in cause of community of perill?

Ans. The same as before, but with more enlargement towards others and lesse respect towards ourselves and our owne right. Hence it was that in the primitive Church they sold all, had all things in common, neither did any man say that which he possessed was his owne. Likewise in their returne out of the captivity, because the worke was greates for the restoring of the church and the danger of enemies was common to all, Nehemiah directs the Jews to liberality and readiness in remitting their debts to their brethren, and disposing liberally to such as wanted, and stand not upon their owne dues which they might have demanded of them. Thus did some of our Forefathers in times of persecution in England, and soe did many of the faithful of other

churches, whereof wee keepe an honorable remembrance of them; and it is to be observed that both in Scriptures and latter stories of the churches that such as have beene most bountifull to the poore saintes, especially in those extraordinary times and occasions, God hath left them highly commended to posterity, as Zacheus, Cornelius, Dorcas, Bishop Hooper, the Cuttler of Brussells and divers others. Observe againe that the Scripture gives noe caussion to restraine any from being over liberall this way; but all men to the liberall and cherefull practise hereof by the sweeter promises; as to instance one for many, Isaiah 58. 6. *Is not this the fast I have chosen to loose the bonds of wickedness, to take off the heavy burdens, to lett the oppressed go free and to breake every yoake, to deale thy bread to the hungry and to bring the poore that wander into thy house, when thou seest the naked to cover them; and then shall thy light brake forth as the morning and thy health shall growe speedily, thy righteousness shall goe before God, and the glory of the Lord shalt embrace thee; then thou shalt call and the Lord shall answer thee &c.*, Ch[ronicles]. 2. 10. *If thou power out thy soule to the hungry, then shall thy light spring out in darkness, and the Lord shall guide thee continually, and satisfie thy soule in draught, and make falt thy bones, thou shalt be like a watered garden, and they shalt be of thee that shall build the old wast places &c.*

On the contrary most heavy curses are layed upon such as are straightened towards the Lord and his people, Judg[es]. 5. *Curse the Meroshe because he came not to help the Lord. Hee whoe shutteth his eares from hearing the cry of the poore, he shall cry and shall not be heard*; Math[ew]. 25. *Goe ye cursed into everlasting fire &c. I was hungry and ye fedd mee not*, Cor[inthians]. 2. 9. 16. He that soweth sparingly shall reape sparingly. Having already sett forth the practice of mercy according to the rule of God's lawe, it will be useful to lay open the groundes of it allsoe, being the other parte of the Commandment and that is the affection from which this exercise of mercy must arise, the Apostle tells us that this *love is the fulfilling of the lawe*, not that it is enough to love our brother and soe noe further; but in regard of the excellency of his partes giving any motion to the other as the soule to the body and the power it hath to sett all the faculties on worke in the outward exercise of this duty; as when wee bid one make the clocke strike, he doth not lay hand on the hammer, which is the immediate instrument of the sound, but sett on worke the first mover or maine wheele; knoweing that will certainly produce the sound which he intends. Soe the way to drawe men to the workes of mercy, is not by force of Argument from the goodness or necessity of the worke; for though this cause may enforce, a rationall minde to some present act of mercy, as is frequent in experience, yet it cannot worke such a habit in a soule, as shall make it prompt upon all occasions to produce the same effect, but by frameing these affections of love in the heart which will as naturally bring forth the other, as any cause doth produce the effect.

The deffinition which the Scripture gives us of love is this. *Love is the bond of perfection*, first it is a bond or ligament. 2ly, it makes the worke perfect. There is noe body but consists of partes and that which knitts these partes together, gives the body its perfection, because it makes eache parte soe contiguous to others as thereby they doe mutually participate with each other, both in strengthe and infirmity, in pleasure and paine. To instance in the most perfect of all bodies; Christ and his Church make one body; the severall partes of this body considered a parte before they were united, were as disproportionate and as much disordering as soe many contrary qualities or elements, but when Christ comes, and by his spirit and love knitts all these partes to himselfe and each to other, it is become the most perfect and best proportioned body in the world, Eph[esians]. 4. 16. *Christ, by whome all the body being knitt together by every joint for the furniture thereof, according to the effectuall power which is in the measure of every perfection of partes, a glorious body without spott or wrinkle*; the ligaments hereof being Christ, or his love, for Christ is love, 1 John 4. 8. Soe this definition is right. *Love is the bond of perfection*.

From hence we may frame these conclusions. 1. First of all, true Christians are of one body in Christ, 1 Cor[inthians]. 12. 12. 13. 17. *Ye are the body of Christ and members of their parte*. All the partes of this body being thus [u]nited are made soe contiguous in a speciall relation as they must needes partake of each other's strength and infirmity; joy and sorrowe, weale and woe. 1 Cor[inthians]. 12. 26. *If one member suffers, all suffer with it, if one be in honor, all rejoyce with it*. 2ly. The ligaments of this body which knitt together are love. 3ly. Noe body can be perfect which wants its proper ligament ... 5ly. This sensibleness and sympathy of each other's conditions will necessarily infuse into each parte a native desire and endeavour, to strengthen, defend, preserve and comfort the other. To insist a little on this conclusion being the product of all the former, the truthe hereof will appeare both by precept and patterne. 1 John 3. 10. *Yee ought to lay downe your lives for the brethren*. Gal[atians]. 6. 2. *beare ye one another's burthen's and soe fulfill the lawe of Christ*. For patterns wee have that first of our Saviour whoe out of his good will in obedience to his father, becomeing a parte of this body and being knitt with it in the bond of love, found such a native sensibleness of our infirmities and sorrowes as he willingly yielded himselfe to deathe to ease the infirmities of the rest of his body, and soe healed their sorrowes. From the like sympathy of partes did the Apostles and many thousands of the Saintes lay downe their lives for Christ. Again the like wee may see in the members of this body among themselves. 1 Rom[ans]. 9. Paule could have been contented to have been separated from Christ, that the Jewes might not be cutt off from the body. It is very observable what hee professeth of his affectionate partaking with every member; *whoe is weake (saith hee) and I am not weake? whoe is offended and I burne not*; and againe, 2 Cor[inthians]. 7. 13. *therefore wee are comforted because yee were comforted*. Of Epaphroditus he speaketh, Phil[ippians]. 2. 30. *that he regarded not his owne life to do him service*. Soe Phebe and others are called *the servants of the churche*. Now it is apparent that they served not for wages, or by constraint, but out of love. The like we shall finde in the histories of the churche, in all ages; the sweete sympathie of affections which was in the members of this body one towards another; their chearfullness in serveing and suffering together; how liberall they were without repineing, harbourers without grudgeing, and helpfull without reproaching; and all from hence, because they had fervent love amongst them; which onely makes the practise of mercy constant and easie.

The next consideration is how this love comes to be wrought. Adam in his first estate was a perfect modell of mankinde in all their generations, and in him this love was perfected in regard of the habit. But Adam, rent himselfe from his Creator, rent all his posterity allsoe one from another; whence it comes that every man is borne with this principle in him to love and seeke himselfe onely, and thus a man continueth till Christ comes and takes possession of the soule and infuseth another principle, love to God and our brother, and this latter having continuall supply from Christ, as the head and roote by which he is united, gets the predomining in the soule, soe by little and little expells the former. 1 John 4. 7. *love cometh of God and every one that loveth is borne of God*, soe that this love is the fruite of the new birthe, and none can have it but the new creature. Now when this quality is thus formed in the soules of men, it workes like the Spirit upon the drie bones. Ezek[ekial]. 39. *bone came to bone*. It gathers together the scattered bones, or perfect old man Adam, and knitts them into one body againe in Christ, whereby a man is become againe a living soule.

The third consideration is concerning the exercise of this love, which is twofold, inward or outward. The outward hath beene handled in the former preface of this discourse. From unfolding the other wee must take in our way that maxime of philosophy. *Simile simili gaudet*, or like will to like; for as of things which are turned with disaffection to eache other, the ground of it is from a dissimilitude or ariseing from the contrary or different nature of the things themselves; for the ground of love is an apprehension of some resemblance in the things loved to that which affects it. This is the cause why the Lord loves the creature, soe farre as it hath any of his Image in it; he loves his elect because they are like himselfe, he beholds them in his beloved sonne.

So a mother loves her childe, because shee throughly conceives a resemblance of herselfe in it. Thus it is betweene the members of Christ; each discernes, by the worke of the Spirit, his owne Image and resemblance in another, and therefore cannot but love him as he loves himself. Now when the soule, which is of a sociable nature, findes anything like to itselfe, it is like Adam when Eve was brought to him. She must be one with himselfe. *This is flesh of my flesh (saith he) and bone of my bone.*

Soe the soule conceives a greate delighte in it; therefore shee desires nearness and familiarity with it. Shee hath a greate propensity to doe it good and receives such content in it, as fearing the miscarriage of her beloved, shee bestowes it in the inmost closett of her heart. Shee will not endure that it shall want any good which shee can give it. If by occasion shee be withdrawne from the company of it, shee is still looking towards the place where shee left her beloved. If shee heard it groane, shee is with it presently. If shee finde it sadd and disconsolate, shee sighes and moanes with it. Shee hath noe such joy as to see her beloved merry and thriving. If shee see it wronged, shee cannot hear it without passion. Shee setts noe boundes to her affections, nor hath any thought of reward. Shee findes recompense enough in the exercise of her love towards it.

Wee may see this acted to life in Jonathan and David. Jonathan a valiant man endued [imbued] with the spirit of love, soe soone as he discovered the same spirit in David had presently his hearte knitt to him by this ligament of love; soe that it is said he loved him as his owne soule, he takes soe great pleasure in him, that hee stripps himselfe to adorne his beloved. His father's kingdome was not soe precious to him as his beloved David, David shall have it with all his hearte. Himself desires noe more but that hee may be neare to him to rejoyce in his good[ness]. Hee chooseth to converse with him in the wilderness even to the hazzard of his owne life, rather than with the greate Courtiers in his father's Pallace. When hee sees danger towards him, hee spares neither rare paines nor perill to direct it. When injury was offered his beloved David, hee would not beare it, though from his owne father. And when they must parte for a season onely, they thought their heartes would have broake for sorrowe, had not their affections found vent by abundance of teares. Other instances might be brought to shewe the nature of this affection; as of Ruthe and Naomi, and many others; but this truthe is cleared enough. If any shall object that it is not possible that love shall be bred or upheld without hope of requitall, it is graunted; but that is not our cause; for this love is allwayes under reward. It never gives, but it allwayes receives with advantage; First in regard that among the members of the same body, love and affection are reciprocally in a most equall and sweete kinde of commerce.

2nly. In regard of the pleasure and content that the exercise of love carries with it, as wee may see in the naturall body. The mouth is at all the paines to receive and mince the foode which serves for the nourishment of all the other partes of the body; yet it hath noe cause to complaine; for first the other partes send backe, by severall passages, a due proportion of the same nourishment, in a better forme for the strengthening and comforting the mouthe. 2ly, the labour of the mouthe is accompanied with such pleasure and content as farre exceeds the paines it takes. Soe is it in all the labour of love among Christians. The partie loving, reapes love again, as was showed before, which the soule covetts more then all the wealth in the world. 3ly. Nothing yielde more pleasure and content to the soule then when it findes that which it may love fervently; for to love and live beloved is the soule's paradise both here and in heaven. In the State of wedlock there be many comforts to learne out of the troubles of that Condition; but let such as have tryed the most, say if there be any sweetness in that Condition comparable to the exercise of mutuall love.

From the former Considerations arise these Conclusions.—1. First, This love among Christians is a reall thing, not imaginarie. 2ly. This love is as absolutely necessary to the being of the body of Christ, as the sinews and other ligaments of a naturall body are to the being of that body.

3ly. This love is a divine, spirituall, nature; free, active, strong, couragious, permanent; undervaluing all things beneath its propper object and of all the graces, this makes us nearer to resemble the virtues of our heavenly father. 4thly. It rests in the love and welfare of its beloved. For the full certain knowledge of those truthe concerning the nature, use, and excellency of this grace, that which the holy ghost hath left recorded, 1 Cor[inthians]. 13, may give full satisfaction, which is needful for every true member of this lovely body of the Lord Jesus, to worke upon their heartes by prayer, meditation continuall exercise at least of the speciall [influence] of this grace, till Christ be formed in them and they in him, all in each other, knitt together by this bond of love.

It rests now to make some application of this discourse, by the present designe, which gave the occasion of writing of it. Herein are 4 things to be propounded; *first* the persons, 2ly the worke, 3ly the end, 4thly the meanes. 1. For *the persons*. Wee are a company professing ourselves fellow members of Christ, in which respect onely though wee were absent from each other many miles, and had our employments as farre distant, yet wee ought to account ourselves knitt together by this bond of love, and, live in the exercise of it, if wee would have comforte of our being in Christ. This was notorious in the practise of the Christians in former times; as is testified of the Waldenses, from the mouth of one of the adversaries *Aeneas Sylvius* "mutuo ament pere antequam norunt," they use to love any of their owne religion even before they were acquainted with them. 2nly, for the *worke* wee have in hand. It is by a mutuall consent, through a speciall overvaluing providence and a more than an ordinary approbation of the Churches of Christ, to seeke out a place of cohabitation and Consortshipp under a due forme of Government both civill and ecclesiasticall. In such cases as this, the care of the publike must oversway all private respects, by which, not only conscience, but meare civill pollicy, dothe binde us. For it is a true rule that particular Estates cannot subsist in the ruin of the publike. 3ly. The *end* is to improve our lives to doe more service to the Lord; the comforte and encrease of the body of Christe, whereof we are members; that ourselves and posterity may be the better preserved from the common corruptions of this evill world, to serve the Lord and worke out our Salvation under the power and purity of his holy ordinances. 4thly, for the *meanes* whereby this must be effected. They are twofold, a conformity with the worke and end wee aime at. These wee see are extraordinary, therefore wee must not content ourselves with usuall ordinary meanes. Whatsoever wee did, or ought to have, done, when wee lived in England, the same must wee doe, and more allsoe, where wee goe. That which the most in their churches mainetaine as truthe in profession onely, wee must bring into familiar and constant practise; as in this duty of love, wee must love brotherly without dissimulation, wee must love one another with a pure hearte fervently. Wee must beare one anothers burthens. We must not looke onely on our owne things, but allsoe on the things of our brethren. Neither must wee thinke that the Lord will beare with such failings at our hands as he dothe from those among whome wee have lived; and that for these 3 Reasons; 1. In regard of the more neare bond of mariage between him and us, wherein hee hath taken us to be his, after a most strickt and peculiar manner, which will make them the more jealous of our love and obedience. Soe he tells the people of Israell, *you onely have I knowne of all the families of the Earthe, therefore will I punishe you for your Transgressions.* 2ly, because *the Lord will be sanctified in them that come neare him.* We know that there were many that corrupted the service of the Lord; some setting upp altars before his owne; others offering both strange fire and strange sacrifices allsoe; yet there came noe fire from heaven, or other sudden judgement upon them, as did upon Nadab and Abihu, whoe yet wee may think did not sinne presumptuously. 3ly. When God gives a speciall commission he looks to have it strictly observed in every article; When he gave Saule a commission to destroy Amaleck, Hee indented with him upon certain articles, and because hee failed in one of the least, and that upon a faire pretense, it lost him the kingdom, which should have beene his reward, if hee had observed

his commission. Thus stands the cause between God and us. We are entered into Covenant with Him for this worke. Wee have taken out a commission. The Lord hath given us leave to drawe our owne articles. Wee have professed to enterprise these and those accounts, upon these and those ends. Wee have hereupon besought Him of favour and blessing. Now if the Lord shall please to heare us, and bring us in peace to the place we desire, then hath hee ratified this covenant and sealed our Commission, and will expect a strict performance of the articles contained in it; but if wee shall neglect the observation of these articles which are the ends wee have propounded, and, dissembling with our God, shall fall to embrace this present world and prosecute our carnall intentions, seeking greate things for ourselves and our posterity, the Lord will surely breake out in wrathe against us; be revenged of such a [sinful] people and make us knowe the price of the breache of such a covenant.

Now the onely way to avoyde this shipwracke, and to provide for our posterity, is to followe the counsell of Micah, *to doe justly, to love mercy, to walk humbly with our God*. For this end, wee must be knitt together, in this worke, as one man. Wee must entertaine each other in brotherly affection. Wee must be willing to abridge ourselves of our superfluities, for the supply of other's necessities. Wee must uphold a familiar commerce together in all meekeness, gentlenes, patience and liberality. Wee must delight in eache other; make other's conditions our owne; rejoyce together, mourne together, labour and suffer together, allwayes haveing before our eyes our commission and community in the worke, as members of the same body. Soe shall wee *keepe the unitie of the spirit in the bond of peace*. The Lord will be our God, and delight to dwell among us, as his owne people, and will command a blessing upon us in all our wayes. Soe that wee shall see much more of his wisdom, power, goodness and truthe, than formerly wee have been acquainted with. Wee shall finde that the God of Israell is among us, when ten of us shall be able to resist a thousand of our enemies; when hee shall make us a prayse and glory that men shall say of succeeding plantations, "the Lord make it likely that of *New England*." For wee must consider that wee shall be as a citty upon a hill. The eyes of all people are upon us. Soe that if wee shall deale falsely with our God in this worke wee have undertaken, and soe cause him to withdrawe his present help from us, wee shall be made a story and a by-word through the world. Wee shall open the mouthes of enemies to speake evill of the wayes of God, and all professors for God's sake. Wee shall shame the faces of many of God's worthy servants, and cause their prayers to be turned into curses upon us till wee be consumed out of the good land whither wee are a going.

I shall shutt upp this discourse with that exhortation of Moses, that faithfull servant of the Lord, in his last farewell to Israell, Deut[eronomy]. 30. *Beloved there is now sett before us life and good, Death and evill, in that wee are commanded this day to love the Lord our God, and to love one another, to walke in his wayes and to keepe his Commandements and his Ordinance and his lawes*, and the articles of our Covenant with him, that *wee may live and be multiplied, and that the Lord our God may blesse us in the land whither wee goe to possesse it. But if our heartes shall turne away, soe that wee will not obey, but shall be seduced, and worshipp and serve other Gods*, our pleasure and proffitts, and *serve them*; it is propounded unto us this day, *wee shall surely perishe out of the good land whither wee passe over this vast sea to possesse it*;

Therefore lett us choose life
that wee, and our seede
may live, by obeyeing His
voyce and cleaveing to Him,
for Hee is our life and
our prosperity.

The Trial of Anne Hutchinson (1637)

The educated daughter of a minister, Anne Hutchinson had an abiding interest in theology, which she did not hesitate to express. Her outspokenness on religious matters made the Puritan ministers of Massachusetts Bay uncomfortable. Not only did she hold informal group discussions of their weekly sermons in her home, she also professed antinomian beliefs, based on the feeling that one could achieve salvation through faith alone. As her views threatened the orthodoxy of the colony, she was brought to trial at the General Court at Newton on charges of heresy. She was condemned upon her stating that God had revealed himself to her directly. Banished from the colony, she relocated to Rhode Island, along with family members and supporters. What follows is an excerpt from the transcript of her trial.

Mr. [John] Winthrop, Governor: Mrs. Hutchinson, you are called here as one of those that have troubled the peace of the commonwealth and the churches here; you are known to be a woman that hath had a great share in the promoting and divulging of those opinions that are the cause of this trouble, and to be nearly joined not only in affinity and affection with some of those the court had taken notice of and passed censure upon, but you have spoken divers things, as we have been informed, very prejudicial to the honour of the churches and ministers thereof, and you have maintained a meeting and an assembly in your house that hath been condemned by the general assembly as a thing not tolerable nor comely in the sight of God nor fitting for your sex, and notwithstanding that was cried down you have continued the same. Therefore we have thought good to send for you to understand how things are, that if you be in an erroneous way we may reduce you that so you may become a profitable member here among us. Otherwise if you be obstinate in your course that then the court may take such course that you may trouble us no further. Therefore I would intreat you to express whether you do assent and hold in practice to those opinions and factions that have been handled in court already, that is to say, whether you do not justify Mr. Wheelwright's sermon and the petition.

Mrs. Hutchinson: I am called here to answer before you but I hear no things laid to my charge.

Gov.: I have told you some already and more I can tell you.

Mrs. H.: Name one, Sir.

Gov.: Have I not named some already?

Mrs. H.: What have I said or done?

Gov.: Why for your doings, this you did harbor and countenance those that are parties in this faction that you have heard of.

Mrs. H.: That's matter of conscience, Sir.

Gov.: Your conscience you must keep, or it must be kept for you.

Mrs. H.: Must not I then entertain the saints because I must keep my conscience.

Gov.: Say that one brother should commit felony or treason and come to his brother's house, if he knows him guilty and conceals him he is guilty of the same. It is his conscience to entertain him, but if his conscience comes into act in giving countenance and entertainment to him that hath broken the law he is guilty too. So if you do countenance those that are transgressors of the law you are in the same fact.

Mrs. H.: What law do they transgress?

Gov.: The law of God and of the state.

Mrs. H.: In what particular?

Gov.: Why in this among the rest, whereas the Lord doth say honour thy father and thy mother.

Mrs. H.: Ey Sir in the Lord.

Gov.: This honour you have broke in giving countenance to them.

Mrs. H.: In entertaining those did I entertain them against any act (for there is the thing) or what God has appointed?

Gov.: You knew that Mr. Wheelwright did preach this sermon and those that countenance him in this do break a law.

Mrs. H.: What law have I broken?

Gov.: Why the fifth commandment.

Mrs. H.: I deny that for he [Mr. Wheelwright] saith in the Lord.

Gov.: You have joined with them in the faction.

Mrs. H.: In what faction have I joined with them?

Gov.: In presenting the petition.

Mrs. H.: Suppose I had set my hand to the petition. What then?

Gov.: You saw that case tried before.

Mrs. H.: But I had not my hand to [not signed] the petition.

Gov.: You have counselled them.

Mrs. H.: Wherein?

Gov.: Why in entertaining them.

Mrs. H.: What breach of law is that, Sir?

Gov.: Why dishonouring the commonwealth.

Mrs. H.: But put the case, Sir, that I do fear the Lord and my parents. May not I entertain them that fear the Lord because my parents will not give me leave?

Gov.: If they be the fathers of the commonwealth, and they of another religion, if you entertain them then you dishonour your parents and are justly punishable.

Mrs. H.: If I entertain them, as they have dishonoured their parents I do.

Gov.: No but you by countenancing them above others put honor upon them.

Mrs. H.: I may put honor upon them as the children of God and as they do honor the Lord.

Gov.: We do not mean to discourse with those of your sex but only this: you so adhere unto them and do endeavor to set forward this faction and so you do dishonour us.

Mrs. H.: I do acknowledge no such thing. Neither do I think that I ever put any dishonour upon you.

Gov.: Why do you keep such a meeting at your house as you do every week upon a set day?

Mrs. H.: It is lawful for me to do so, as it is all your practices, and can you find a warrant for yourself and condemn me for the same thing? The ground of my taking it up was, when I first came to this land because I did not go to such meetings as those were, it was presently reported that I did not allow of such meetings but held them unlawful and therefore in that regard they said I was proud and did despise all ordinances. Upon that a friend came unto me and told me of it and I to prevent such aspersions took it up, but it was in practice before I came. Therefore I was not the first.

Gov.: ... By what warrant do you continue such a course?

Mrs. H.: I conceive there lies a clear rule in Titus that the elder women should instruct the younger and then I must have a time wherein I must do it.

Gov.: All this I grant you, I grant you a time for it, but what is this to the purpose that you Mrs. Hutchinson must call a company together from their callings to come to be taught of you? ...

Mrs. H.: If you look upon the rule in Titus it is a rule to me. If you convince me that it is no rule I shall yield.

Gov.: You know that there is no rule that crosses another, but this rule crosses that in the Corinthians. But you must take it in this sense that elder women must instruct the younger about their business and to love their husbands and not to make them to clash....

Mrs. H.: Will it please you to answer me this and to give me a rule for then I will willingly submit to any truth. If any come to my house to be instructed in the ways of God what rule have I to put them away?.... Do you think it not lawful for me to teach women and why do you call me to teach the court?

Gov.: We do not call you to teach the court but to lay open yourself....

[They continue to argue over what rule she had broken.]

Gov.: Your course is not to be suffered for. Besides that we find such a course as this to be greatly prejudicial to the state. Besides the occasion that it is to seduce many honest persons that are called to those meetings and your opinions and your opinions being known to be different from the word of God may seduce many simple souls that resort unto you. Besides that the occasion which hath come of late hath come from none but such as have frequented your meetings, so that now they are flown off from magistrates and ministers and since they have come to you. And besides that it will not well stand with the commonwealth that families should be neglected for so many neighbors and dames and so much time spent. We see no rule of God for this. We see not that any should have authority to set up any other exercises besides what authority hath already set up and so what hurt comes of this you will be guilty of and we for suffering you.

Mrs. H.: Sir, I do not believe that to be so.

Gov.: Well, we see how it is. We must therefore put it away from you or restrain you from maintaining this course.

Mrs. H.: If you have a rule for it from God's word you may.

Gov.: We are your judges, and not you ours and we must compel you to it.

Mrs. H.: If it please you by authority to put it down I will freely let you for I am subject to your authority....

Deputy Governor, Thomas Dudley: I would go a little higher with Mrs. Hutchinson. About three years ago we were all in peace. Mrs. Hutchinson, from that time she came hath made a disturbance, and some that came over with her in the ship did inform me what she was as soon as she was landed. I being then in place dealt with the pastor and teacher of Boston and desired them to enquire of her, and then I was satisfied that she held nothing different from us. But within half a year after, she had vented divers of her strange opinions and had made parties in the country, and at length it comes that Mr. Cotton and Mr. Vane were of her judgment, but Mr. Cotton had cleared himself that he was not of that mind. But now it appears by this woman's meeting that Mrs. Hutchinson hath so forestalled the minds of many by their resort to her meeting that now she hath a potent party in the country. Now if all these things have endangered us as from that foundation and if she in particular hath disparaged all our ministers in the land that they have preached a covenant of works, and only Mr. Cotton a covenant of grace, why this is not to be suffered, and therefore being driven to the foundation and it being found that Mrs. Hutchinson is she that hath depraved all the ministers and hath been the cause of what is fallen out, why we must take away the foundation and the building will fall.

Mrs. H.: I pray, Sir, prove it that I said they preached nothing but a covenant of works.

Dep. Gov.: Nothing but a covenant of works. Why a Jesuit may preach truth sometimes.

Mrs. H.: Did I ever say they preached a covenant of works then?

Dep. Gov.: If they do not preach a covenant of grace clearly, then they preach a covenant of works.

Mrs. H.: No, Sir. One may preach a covenant of grace more clearly than another, so I said....

Dep. Gov.: When they do preach a covenant of works do they preach truth?

Mrs. H.: Yes, Sir. But when they preach a covenant of works for salvation, that is not truth.

Dep. Gov.: I do but ask you this: when the ministers do preach a covenant of works do they preach a way of salvation?

Mrs. H.: I did not come hither to answer questions of that sort.

Dep. Gov.: Because you will deny the thing.

Mrs. H.: Ey, but that is to be proved first.

Dep. Gov.: I will make it plain that you did say that the ministers did preach a covenant of works.

Mrs. H.: I deny that.

Dep. Gov.: And that you said they were not able ministers of the New Testament, but Mr. Cotton only.

Mrs. H.: If ever I spake that I proved it by God's word.

Court: Very well, very well.

Mrs. H.: If one shall come unto me in private, and desire me seriously to tell them what I thought of such an one, I must either speak false or true in my answer.

Dep. Gov.: Likewise I will prove this that you said the gospel in the letter and words holds forth nothing but a covenant of works and that all that do not hold as you do are in a covenant of works.

Mrs. H.: I deny this for if I should so say I should speak against my own judgment....

Mr. Hugh Peters: That which concerns us to speak unto, as yet we are sparing in, unless the court command us to speak, then we shall answer to Mrs. Hutchinson notwithstanding our brethren are very unwilling to answer.

[The Governor says to do so. Six ministers then testify to the particular charges and that she was "not only difficult in her opinions, but also of an intemperate spirit"]

Mr. Peters:.... [I asked her] What difference do you conceive to be between your teacher and us? ... Briefly, she told me there was a wide and broad difference.... He preaches the covenant of grace and you the covenant of works, and that you are not able ministers of the New Testament and know no more than the apostles did before the resurrection of Christ. I did then put it to her, What do you conceive of such a brother? She answered he had not the seal of the spirit.

Mrs. H.: If our pastor would shew his writings you should see what I said, and that many things are not so as is reported.

Mr. Wilson: ... what is written [here now] I will avouch.

Mr. Weld: [Agrees that Peters related Hutchinson's words accurately.]

Mr. Phillips: [Agrees that Peters related Hutchinson's words accurately.] Then I asked her of myself (being she spake rashly of them all) because she never heard me at all. She likewise said that we were not able ministers of the New Testament and her reason was because we were not sealed.

Mr. Simmes: [Agrees that Peters related Hutchinson's words accurately.]

Mr. Shephard: [Also to Same.]

Mr. Eliot: [Agrees that Peters related Hutchinson's words accurately.]

Dep. Gov.: I called these witnesses and you deny them. You see they have proved this and you deny this, but it is clear. You say they preached a covenant of works and that they were not able ministers of the New Testament; now there are two other things that you did affirm which were that the scriptures in the letter of them held forth nothing but a covenant of works and likewise that those that were under a covenant of works cannot be saved.

Mrs. H.: Prove that I said so.

Gov.: Did you say so?

Mrs. H.: No, Sir, it is your conclusion.

Dep. Gov.: What do I do charging of you if you deny what is so fully proved?

Gov.: Here are six undeniable ministers who say it is true and yet you deny that you did say that they preach a covenant of works and that they were not able ministers of the gospel, and it appears plainly that you have spoken it, and whereas you say that it was drawn from you in a way of friendship, you did profess then that it was out of conscience that you spake....

Mrs. H.:.... They thought that I did conceive there was a difference between them and Mr. Cotton.... I might say they might preach a covenant of works as did the apostles, but to preach a covenant of works and to be under a covenant of works is another business.

Dep. Gov.: There have been six witnesses to prove this and yet you deny it. [And then he mentions a seventh, Mr. Nathaniel Ward.]

Mrs. H.: I acknowledge using the words of the apostle to the Corinthians unto him, [Mr. Ward] that they that were ministers of the letter and not the spirit did preach a covenant of works.

Gov.: Mrs. Hutchinson, the court you see hath laboured to bring you to acknowledge the error of your way that so you might be reduced, the time grows late, we shall therefore give you a little more time to consider of it and therefore desire that you attend the court again in the morning ...

[The next morning]

Gov.: We proceeded ... as far as we could ... There were divers things laid to her charge: her ordinary meetings about religious exercises, her speeches in derogation of the ministers among us, and the weakening of the hands and hearts of the people towards them. Here was sufficient proof made of that which she was accused of, in that point concerning the ministers and their ministry, as that they did preach a covenant of works when others did preach a covenant of grace, and that they were not able ministers of the New Testament, and that they had not the seal of the spirit, and this was spoken not as was pretended out of private conference, but out of conscience and warrant from scripture alleged the fear of man is a snare and seeing God had given her a calling to it she would freely speak. Some other speeches she used, as that the letter of the scripture held forth a covenant of works, and this is offered to be proved by probable grounds.... Controversy—should the witnesses should be recalled and made swear an oath, as Mrs. Hutchinson desired.... I see no necessity of an oath in this thing seeing it is true and the substance of the matter confirmed by divers, yet that all may be satisfied, if the elders will take an oath they shall have it given them....

Mrs. H.: After that they have taken an oath I will make good what I say.

Gov.: Let us state the case, and then we may know what to do. That which is laid to Mrs. Hutchinson charge is that, that she hath traduced the magistrates and ministers of this jurisdiction, that she hath said the ministers preached a covenant of works and Mr. Cotton a covenant of grace, and that they were not able ministers of the gospel, and she excuses it that she made it a private conference and with a promise of secrecy, &c. Now this is charged upon her, and they therefore sent for her seeing she made it her table talk, and then she said the fear of man was a snare and therefore she would not be affeared of them....

Dep. Gov.: Let her witnesses be called.

Gov.: Who be they?

Mrs. H.: Mr. Leveret and our teacher and Mr. Coggeshall.

Gov.: Mr. Coggeshall was not present.

Mr. Coggeshall: Yes, but I was. Only I desired to be silent till I should be called.

Gov.: Will you, Mr. Coggeshall, say that she did not say so?

Mr. Coggeshall: Yes, I dare say that she did not say all that which they lay against her.

Mr. Peters: How dare you look into the court to say such a word?

Mr. Coggeshall: Mr. Peters takes upon him to forbid me. I shall be silent.

Mr. Stoughton [assistant of the Court]: Ey, but she intended this that they say.

Gov.: Well, Mr. Leveret, what were the words? I pray, speak.

Mr. Leveret: To my best remembrance when the elders did send for her, Mr. Peters did with much vehemency and intreaty urge her to tell what difference there was between Mr. Cotton and them, and upon his urging of her she said "The fear of man is a snare, but they that trust upon the Lord shall be safe." And being asked wherein the difference was, she answered that they did not preach a covenant of grace so clearly as Mr. Cotton did, and she gave this reason of it: because that as the apostles were for a time without the spirit so until they had received the witness of the spirit they could not preach a covenant of grace so clearly.

Gov.: Don't you remember that she said they were not able ministers of the New Testament?

Mrs. H.: Mr. Weld and I had an hour's discourse at the window and then I spake that, if I spake it....

Gov.: Mr. Cotton, the court desires that you declare what you do remember of the conference which was at the time and is now in question.

Mr. Cotton: I did not think I should be called to bear witness in this cause and therefore did not labor to call to remembrance what was done; but the greatest passage that took impression upon me was to this purpose. The elders spake that they had heard that she had spoken some condemning words of their ministry, and among other things they did first pray her to answer wherein she thought their ministry did differ from mine. How the comparison sprang I am ignorant, but sorry I was that any comparison should be between me and my brethren and uncomfortable it was. She told them to this purpose that they did not hold forth a covenant of grace as I did. But wherein did we differ? Why she said that they did not hold forth the seal of the spirit as he doth. Where is the difference there? Say they, why saith she, speaking to one or other of them, I know not to whom. You preach of the seal of the spirit upon a work and he upon free grace without a work or without respect to a work; he preaches the seal of the spirit upon free grace and you upon a work. I told her I was very sorry that she put comparisons between my ministry and theirs, for she had said more than I could myself, and rather I had that she had put us in fellowship with them and not have made that discrepancy. She said, she found the difference....

This was the sum of the difference, nor did it seem to be so ill taken as it is and our brethren did say also that they would not so easily believe reports as they had done and withal mentioned that they would speak no more of it, some of them did; and afterwards some of them did say they were less satisfied than before. And I must say that I did not find her saying that they were under a covenant of works, nor that she said they did preach a covenant of works.

[More back and forth between Rev. John Cotton, trying to defend Mrs. Hutchinson, and Mr. Peters, about exactly what Mrs. Hutchinson said.]

Mrs. H.: If you please to give me leave I shall give you the ground of what I know to be true. Being much troubled to see the falseness of the constitution of the Church of England, I had like to have turned Separatist. Whereupon I kept a day of solemn humiliation and pondering of the thing; this scripture was brought unto me—he that denies Jesus Christ to be come in the flesh is antichrist. This I considered of and in considering found that the papists did

not deny him to be come in the flesh, nor we did not deny him—who then was antichrist? Was the Turk antichrist only? The Lord knows that I could not open scripture; he must by his prophetic office open it unto me. So after that being unsatisfied in the thing, the Lord was pleased to bring this scripture out of the Hebrews. he that denies the testament denies the testator, and in this did open unto me and give me to see that those which did not teach the new covenant had the spirit of antichrist, and upon this he did discover the ministry unto me; and ever since, I bless the Lord, he hath let me see which was the clear ministry and which the wrong. Since that time I confess I have been more choice and he hath left me to distinguish between the voice of my beloved and the voice of Moses, the voice of John the Baptist and the voice of antichrist, for all those voices are spoken of in scripture. Now if you do condemn me for speaking what in my conscience I know to be truth I must commit myself unto the Lord.

Mr. Nowel [assistant to the Court]: How do you know that was the spirit?

Mrs. H.: How did Abraham know that it was God that bid him offer his son, being a breach of the sixth commandment?

Dep. Gov.: By an immediate voice.

Mrs. H.: So to me by an immediate revelation.

Dep. Gov.: How! an immediate revelation.

Mrs. H.: By the voice of his own spirit to my soul. I will give you another scripture, Jer[emiah]. 46: 27–28—out of which the Lord showed me what he would do for me and the rest of his servants. But after he was pleased to reveal himself to me I did presently, like Abraham, run to Hagar. And after that he did let me see the atheism of my own heart, for which I begged of the Lord that it might not remain in my heart, and being thus, he did show me this (a twelvemonth after) which I told you of before.... Therefore, I desire you to look to it, for you see this scripture fulfilled this day and therefore I desire you as you tender the Lord and the church and commonwealth to consider and look what you do. You have power over my body but the Lord Jesus hath power over my body and soul; and assure yourselves thus much, you do as much as in you lies to put the Lord Jesus Christ from you, and if you go on in this course you begin, you will bring a curse upon you and your posterity, and the mouth of the Lord hath spoken it.

Dep. Gov.: What is the scripture she brings?

Mr. Stoughton [assistant to the Court]: Behold I turn away from you.

Mrs. H.: But now having seen him which is invisible I fear not what man can do unto me.

Gov.: Daniel was delivered by miracle; do you think to be deliver'd so too?

Mrs. H.: I do here speak it before the court. I look that the Lord should deliver me by his providence.... [Because God had said to her] though I should meet with affliction, yet I am the same God that delivered Daniel out of the lion's den, I will also deliver thee.

Mr. Harlakenden [assistant to the Court]: I may read scripture and the most glorious hypocrite may read them and yet go down to hell.

Mrs. H.: It may be so....

Gov.: I am persuaded that the revelation she brings forth is delusion.

[The trial text here reads:] All the court but some two or three ministers cry out, we all believe it—we all believe it. [Mrs. Hutchinson was found guilty.]

Gov.: The court hath already declared themselves satisfied concerning the things you hear, and concerning the troublesomeness of her spirit and the danger of her course amongst us, which is not to be suffered. Therefore if it be the mind of the court that Mrs. Hutchinson for these things that appear before us is unfit for our society, and if it be the mind of the court that she shall be banished out of our liberties and imprisoned till she be sent away, let them hold up their hands.

[All but three did so.]

Gov.: Mrs. Hutchinson, the sentence of the court you hear is that you are banished from out of our jurisdiction as being a woman not fit for our society, and are to be imprisoned till the court shall send you away.

Mrs. H.: I desire to know wherefore I am banished?

Gov.: Say no more. The court knows wherefore and is satisfied.

Fundamental Orders of Connecticut (1639)

Often considered the first written constitution in America, the Fundamental Orders were adopted by freemen from the three Connecticut towns of Windsor, Hartford, and Wethersfield. This compact embodied democratic ideals that stressed the good of the community over individuals, and it provided guidelines under which all could live.

For as much as it hath pleased Almighty God by the wise disposition of his divine providence so to order and dispose of things that we the Inhabitants and

Residents of Windsor, Hartford and Wethersfield are now cohabiting and dwelling in and upon the River of Connectecotte and the lands thereunto adjoining; and well knowing where a people are gathered together the word of God requires that to maintain the peace and union of such a people there should be an orderly and decent Government established according to God, to order and dispose of the affairs of the people at all seasons as occasion shall require; do therefore associate and conjoin ourselves to be as one Public State or Commonwealth; and do for ourselves and our successors and such as shall be adjoined to us at any time hereafter, enter into Combination and Confederation together, to maintain and preserve the liberty and purity of the Gospel of our Lord Jesus which we now profess, as also, the discipline of the Churches, which according to the truth of the said Gospel is now practiced amongst us; as also in our civil affairs to be guided and governed according to such Laws, Rules, Orders and Decrees as shall be made, ordered, and decreed as followeth:

1. It is Ordered, sentenced, and decreed, that there shall be yearly two General Assemblies or Courts, the one the second Thursday in April, the other the second Thursday in September following; the first shall be called the Court of Election, wherein shall be yearly chosen from time to time, so many Magistrates and other public Officers as shall be found requisite: Whereof one to be chosen Governor for the year ensuing and until another be chosen, and no other Magistrate to be chosen for more than one year: provided always there be six chosen besides the Governor, which being chosen and sworn according to an Oath recorded for that purpose, shall have the power to administer justice according to the Laws here established, and for want thereof, according to the Rule of the Word of God; which choice shall be made by all that are admitted freemen and have taken the Oath of Fidelity, and do cohabit within this Jurisdiction having been admitted Inhabitants by the major part of the Town wherein they live or the major part of such as shall be then present.
2. It is Ordered, sentenced, and decreed, that the election of the aforesaid Magistrates shall be in this manner: every person present and qualified for choice shall bring in (to the person deputed to receive them) one single paper with the name of him written in it whom he desires to have Governor, and that he that hath the greatest number of papers shall be Governor for that year. And the rest of the Magistrates or public officers to be chosen in this manner: the Secretary for the time being shall first read the names of all that are to be put to choice and then shall severally nominate them distinctly, and every one that would have the person nominated to be chosen shall bring in one single paper written upon, and he that would not have him chosen shall bring in a blank; and every one that hath more written papers than blanks shall be a Magistrate for that year; which papers shall be received and told by one or more that shall be then chosen by the court and sworn to be faithful therein; but in case there should not be six chosen as aforesaid, besides the Governor, out of those which are nominated, than he or they which have the most written papers shall be a Magistrate or Magistrates for the ensuing year, to make up the aforesaid number.
3. It is Ordered, sentenced, and decreed, that the Secretary shall not nominate any person, nor shall any person be chosen newly into the Magistracy which was not propounded in some General Court before, to be nominated the next election; and to that end it shall be lawful for each of the Towns aforesaid by their deputies to nominate any two whom they conceive fit to be put to election; and the Court may add so many more as they judge requisite.
4. It is Ordered, sentenced, and decreed, that no person be chosen Governor above once in two years, and that the Governor be always a member of some approved Congregation, and formerly of the Magistracy within this Jurisdiction; and that all the Magistrates, Freemen of this Commonwealth; and that no Magistrate or other public officer shall execute any part of his or their office before they are severally sworn, which shall be done in the face of the court if they be present, and in case of absence by some deputed for that purpose.
5. It is Ordered, sentenced, and decreed, that to the aforesaid Court of Election the several Towns shall send their deputies, and when the Elections are ended they may proceed in any public service as at other Courts. Also the other General Court in September shall be for making of laws, and any other public occasion, which concerns the good of the Commonwealth.
6. It is Ordered, sentenced, and decreed, that the Governor shall, either by himself or by the Secretary, send out summons to the Constables of every Town for the calling of these two standing Courts one month at least before their several times: And also if the Governor and the greatest part of the Magistrates see cause upon any special occasion to call a General Court, they may give order to the Secretary so to do within fourteen days' warning: And if urgent necessity so required, upon a shorter notice, giving sufficient grounds for it to the deputies when they meet, or else be questioned for the same; And if the Governor and major part of Magistrates shall either neglect or refuse to call the two General standing Courts or either of them, as also at other times when the occasions of the Commonwealth require, the Freemen thereof, or the major part of them, shall petition to them so to do; if then it be either denied or neglected, the said Freemen, or the major part of them, shall have the power to give order to the Constables of the several Towns to do the same, and so may meet together, and choose to themselves a Moderator, and may proceed to do any act of power which any other General Courts may.
7. It is Ordered, sentenced, and decreed, that after there are warrants given out for any of the said General Courts, the Constable or Constables of each Town, shall forthwith give notice distinctly to the inhabitants of the same, in some public assembly or by going or sending from house to house, that at a place and time by him or them limited and set, they meet and assemble themselves together to elect and choose certain deputies to be at the General Court then following to agitate the affairs of the Commonwealth; which said deputies shall be chosen by all that are admitted Inhabitants in the several Towns and have taken the oath of fidelity; provided that none be chosen a Deputy for any General Court which is not a Freeman of this Commonwealth. The aforesaid deputies shall be chosen in manner following: every person that is present and qualified as before expressed, shall bring the names of such, written in several papers, as they desire to have chosen for that employment, and these three or four, more or less, being the number agreed on to be chosen for that time, that have the greatest number of papers written for them shall be deputies for that Court; whose names shall be endorsed on the back side of the warrant and returned into the Court, with the Constable or Constables' hand unto the same.
8. It is Ordered, sentenced, and decreed, that Windsor, Hartford, and Wethersfield shall have power, each Town, to send four of their Freemen as their deputies to every General Court; and Whatsoever other Town shall be hereafter added to this Jurisdiction, they shall send so many deputies as the Court shall judge meet, a reasonable proportion to the number of Freemen that are in the said Towns being to be attended therein; which deputies shall have the power of the whole Town to give their votes and allowance to all such laws and orders as may be for the public good, and unto which the said Towns are to be bound.

9. It is Ordered, sentenced, and decreed, that the deputies thus chosen shall have power and liberty to appoint a time and a place of meeting together before any General Court, to advise and consult of all such things as may concern the good of the public, as also to examine their own Elections, whether according to the order, and if they or the greatest part of them find any election to be illegal they may seclude such for present from their meeting, and return the same and their reasons to the Court; and if it be proved true, the Court may fine the party or parties so intruding, and the Town, if they see cause, and give out a warrant to go to a new election in a legal way, either in part or in whole. Also the said deputies shall have power to fine any that shall be disorderly at their meetings, or for not coming in due time or place according to appointment; and they may return the said fines into the Court if it be refused to be paid, and the Treasurer to take notice of it, and to escheat or levy the same as he does other fines.
10. It is Ordered, sentenced, and decreed, that every General Court, except such as through neglect of the Governor and the greatest part of the Magistrates the Freemen themselves do call, shall consist of the Governor, or some one chosen to moderate the Court, and four other Magistrates at least, with the major part of the deputies of the several Towns legally chosen; and in case the Freemen, or major part of them, through neglect or refusal of the Governor and major part of the Magistrates, shall call a Court, it shall consist of the major part of Freemen that are present or their deputies, with a Moderator chosen by them: In which said General Courts shall consist the supreme power of the Commonwealth, and they only shall have power to make laws or repeal them, to grant levies, to admit of Freemen, dispose of lands undisposed of, to several Towns or persons, and also shall have power to call either Court or Magistrate or any other person whatsoever into question for any misdemeanor, and may for just causes displace or deal otherwise according to the nature of the offense; and also may deal in any other matter that concerns the good of this Commonwealth, except election of Magistrates, which shall be done by the whole body of Freemen. In which Court the Governor or Moderator shall have power to order the Court, to give liberty of speech, and silence unseasonable and disorderly speakings, to put all things to vote, and in case the vote be equal to have the casting voice. But none of these Courts shall be adjourned or dissolved without the consent of the major part of the Court.
11. It is Ordered, sentenced, and decreed, that when any General Court upon the occasions of the Commonwealth have agreed upon any sum, or sums of money to be levied upon the several Towns within this Jurisdiction, that a committee be chosen to set out and appoint what shall be the proportion of every Town to pay of the said levy, provided the committee be made up of an equal number out of each Town.

14th January 1639 the 11 Orders above said are voted.

Source: *The Federal and State Constitutions, Colonial Charters, and Other Organic Laws of the States, Territories, and Colonies Now or Heretofore Forming the United States of America*, compiled and edited under the Act of Congress of June 30, 1906, by Francis Newton Thorpe (Washington, DC: Government Printing Office, 1909).

Psalm 23 from *The Bay Psalm Book* (1640)

The Bay Psalm Book, more correctly entitled *The Whole Book of Psalmes Faithfully Translated into English Metre*, was the first book printed and bound in the British colonies. This work replaced the earlier *Ainsworth Psalter*, which the Puritans brought to the colony from the Netherlands. *The Bay Psalm Book* is generally thought to have been written by Cotton Mather, with the help of other clergy of the Massachusetts Bay Colony, although some scholars believe it was written by Mather's grandfather John Cotton. One of the most widely known selections from *The Bay Psalm Book* is Psalm 23.

The Lord to me a shepherd is,
Want therefore I shall not,
He in the folds of tender grass
Doth make me down to lie
To waters calm he gently leads
Restore my soul doth he
He doth in paths of righteousness
For his names sake lead me.
Yea though in valley of death's shade
I walk none ill I'll fear,
Because thou art with me, thy rod, and staff my comfort are.
For me a table thou hast spread
In presence of my foes;
Thou dost annoint my head with oil
My cup it over-flows.
Goodness and mercy surely shall
All my days follow me;
And in the Lord's house I shall dwell
So long as days shall be.

Maryland Toleration Act (1649)

From the beginning, the colony of Maryland had always enjoyed religious tolerance. The following act guarded Lord Baltimore against charges that Maryland was a Catholic colony, and it officially spread the mantle of protection to Protestants as the Puritan party in Parliament increased. When the Puritans gained political control of Maryland in 1654, protection of Catholics was withdrawn, but it was restored when Lord Baltimore regained leadership.

An Act Concerning Religion

Forasmuch as in a well governed and Christian Commonwealth matters concerning Religion and the honor of God ought in the first place to be taken, into serious consideration and endeavoured to be settled, be it therefore ordered and enacted by the Right Honourable Cecilius Lord Baron of Baltimore absolute Lord and Proprietary of this Province with the advise and consent of this Generall Assembly:

That whatsoever person or persons within this Province and the Islands thereunto belonging shall from henceforth blaspheme God, that is Curse him, or deny our Saviour Jesus Christ to be the son of God, or shall deny the holy Trinity the father son and holy Ghost, or the Godhead of any of the said three persons of the Trinity or the Unity of the Godhead, or shall use or utter any reproachfull speeches, words or language concerning the said Holy Trinity, or any of the said three persons thereof, shall be punished with death and confiscation or forfeiture of all his or her lands and goods to the Lord Proprietary and his heires.

And be it also enacted by the authority and with the advise and assent aforesaid, that whatsoever person or persons shall from henceforth use or utter any reproachfull words or speeches concerning the blessed Virgin Mary the Mother of our Saviour or the holy apostles or evangelists or any of them shall in such case for the first offence forfeit to the said Lord Proprietary and his heirs Lords and proprietaries of this province the summe of five pound Sterling or the value thereof to be levied on the goods and chattells of every such person soe offending, but in case such offender or offenders, shall not then have goods and chattells sufficient for the satisfyeing of such forfeiture, or that the same bee not otherwise speedily satisfied that then such offender or offenders shalbe publically whipped and be imprisoned during the pleasure of the Lord Proprietary or the lieutenant or chief governor of this Province for the time being. And that every such offender or offenders for every second offence shall forfeit tenne pound sterling or the value thereof to bee levied as aforesaid, or in case such offender or offenders shall not then have goods and chattells within this Province sufficient for that purpose then to be publically and severely whipped and imprisoned as before is expressed. And that every person or persons before mentioned offending herein the third time, shall for such third offence forfeit all his lands and goods and be for ever banished and expelled out of this Province.

And be it also further enacted by the same authority advise and assent that whatsoever person or persons shall from henceforth upon any occasion of offence or otherwise in a reproachful manner or Way declare call or denominate any person or persons whatsoever inhabiting, residing, traffiqueing, trading or comerceing within this Province or within any the ports, harbors, creeks or havens to the same belonging an heritick, scismatick, idolator, puritan, independant, Prespiterian popish prest, Jesuite, Jesuited papist, Lutheran, Calvenist, Anabaptist, Brownist, Antinomian, Barrowist, Roundhead, Separatist, or any other name or terme in a reproachfull manner relating to matter of religion shall for every such offence forfeit and loose the somme of tenne shillings sterling or the value thereof to bee levied on the goods and chattells of every such offender and offenders, the one half thereof to be forfeited and paid unto the person and persons of whom such reproachfull words are or shalbe spoken or uttered, and the other half thereof to the Lord Proprietary and his heires Lords and Proprietaries of this Province. But if such person or persons who shall at any time utter or speake any such reproachfull words or language shall not have goods or chattells sufficient and overt within this Province to be taken to satisfie the penalty aforesaid or that the same bee not otherwise speedily satisfied, that then the person or persons so offending shall be publically whipped, and shall suffer imprisonment without bail or maineprise [bail] untill he, she or they respectively shall satisfy the party so offended or greived by such reproachfull language by asking him or her respectively forgiveness publically for such his offence before the Magistrate of chief officer or officers of the town or place where such offence shal be given.

And be it further likewise enacted by the authority and consent aforesaid that every person and persons within this Province that shall at any time hereafter prophane the Sabbath or Lords day called Sunday by frequent swearing, drunkennes or by any uncivil or disorderly recreation, or by working on that day when absolute necessity doth not require it shall for every such first offence forfeit 2s 6d sterling or the value thereof, and for the second offence 5s sterling or the value thereof, and for the third offence and so for every time he shall offend in like manner afterwards 10s sterling or the value thereof. And in case such offender and offenders shall not have sufficient goods or chattells within this Province to satisfy any of the said Penalties respectively hereby imposed for prophaning the Sabbath or Lords day called Sunday as aforesaid, That in Every such case the partie so offending shall for the first and second offence in that kind be imprisoned till he or she shall publicly in open Court before the chief Commander Judge or Magistrate, of that County Town or precinct where such offence shall be committed acknowledge the scandall and offence he hath in that respect given against God and the good and civil governement of this Province, And for the third offence and for every time after shall also bee publically whipped.

And whereas the enforcing of the conscience in matters of religion hath frequently fallen out to be of dangerous consequence in those commonwealthes where it hath been practised, and for the more quiet and peaceable governement of this Province, and the better to preserve mutual love and amity among the inhabitants thereof, be it therefore also by the Lord Proprietary with the advise and consent of this Assembly ordered and enacted (except as in this present Act is before declared and set forth) that no person or persons whatsoever within this Province, or the islands, ports, harbors, creekes, or havens thereunto belonging professing to beleive in Jesus Christ, shall from henceforth be any waies troubled, molested or discountenanced for or in respect of his or her religion nor in the free exercise thereof within this Province or the islands thereunto belonging nor any way compelled to the beleif or exercise of any other religion against his or her consent, so as they be not unfaithfull to the Lord Proprietary, or molest or conspire against the civil governement established or to be established in this Province under him or his heires. And that all and every person and persons that shall presume contrary to this Act and the true intent and meaning thereof directly or indirectly either in person or estate willfully to wrong disturbe trouble or molest any person whatsoever within this Province professing to beleive in Jesus Christ for or in respect of his or her religion or the free exercise thereof within this Province other than is provided for in this Act that such person or persons so offending, shall be compelled to pay treble damages to the party so wronged or molested, and for every such offence shall also forfeit 20s sterling in money or the value thereof, half thereof for the use of the Lord Proprietary, and

his heires Lords and Proprietaries of this Province, and the other half for the use of the party so wronged or molested as aforesaid, or if the partie so offending as aforesaid shall refuse or be unable to recompense the party so wronged, or to satisfy such fine or forfeiture, then such offender shall be severely punished by public whipping and imprisonment during the pleasure of the Lord Proprietary, or his Lieutenant or chief Governor of this Province for the time being without baile or maineprise.

And be it further also enacted by the authority and consent aforesaid that the sheriff or other officer or officers from time to time to be appointed and authorized for that purpose, of the county towne or precinct where every particular offence in this present Act conteyned shall happen at any time to be committed and whereupon there is hereby a forfeiture fine or penalty imposed shall from time to time distraine and seise the goods and estate of every such person so offending as aforesaid against this present Act or any part thereof, and sell the same or any part thereof for the full satisfaccion of such forfeiture, fine, or penalty as aforesaid, Restoring unto the partie so offending the remainder or overplus of the said goods or estate after such satisfaccion so made as aforesaid.

The freemen have assented.

Source: W. H. Browne, et al., eds. *Archives of Maryland: Vol. I, Proceedings and Acts of the General Assembly of Maryland, January 1637/8–September 1664* (Baltimore: Maryland Historical Society, 1883), 244–47.

Connecticut Blue Laws (1650)

Blue laws originated in New Haven through social legislation. These laws covered all social concerns from arrests, capital offenses, children, and gaming, to regulations regarding marriage and schooling. The following are excerpts from the 1650 Code of the Connecticut General Court, which enacted laws to support and expand on the Fundamental Orders of 1639. Many other colonies established similar legislation to control their societies.

Forasmuch as the free fruition of such liberties, immunities, privileges as humanity, civility and Christianity call for, as due to every man in his place and proportion, without impeachment and infringement, has ever been and ever will be the tranquility and stability of churches and commonwealths; and the denial or deprival thereof, the disturbance, if not ruin of both: It is thereof ordered by this Court, and authority thereof, that no man's life shall be taken away; no man's honor or good name shall be stained; no man's person shall be arrested, restrained, banished, dismembered, nor any way punished; no man shall be deprived of his wife or children; no man's goods or estates shall be taken away from him nor anyways damaged, under color of law, or countenance of authority; unless it be by the virtue or equity of some express law of the country warranting the same, established by a General Court and sufficiently published, or in case of the defect of a law, in any particular case, by the Word of God.

Arrests

It is ordered and decreed by this Court, and authority thereof, that no person shall be arrested or imprisoned for any debt or fine if the law can find any competent means of satisfaction otherwise from his estate, and if not, his person may be arrested and imprisoned, where he shall be kept at his own charge, not the plaintiff's, till satisfaction be made, unless the court that had cognizance of the cause, or some superior court, shall otherwise determine; provided, nevertheless, that no man's person shall be kept in prison for debt, but when there appears some estate which he will not produce, to which end, any court or commissioners authorized by the General Court, may administer an oath to the party, or any others suspected to be privy in concealing his estate, he shall satisfy by service, if the creditor require it; but shall not be sold to any but of the English nation....

Capital Laws

1. If any man after legal conviction shall have or worship any other God but the Lord God, he shall be put to death (Deut. 13: 6, 17: 2, Ex. 22: 20).
2. If any man or woman be a witch, that is, has or consults with a familiar spirit, they shall be put to death (Ex. 22: 18; Lev. 20: 27; Deut. 18: 10, 11).
3. If any person shall blasphemy the name of God the Father, Son or Holy Ghost with direct, express, presumptuous, or high-handed blasphemy, or shall curse in the like manner, he shall be put to death.
4. If any person shall commit any willful murder, which is manslaughter, committed upon malice, hatred, or cruelty, not in a man's necessary and just defense, nor by mere casualty against his will, he shall be put to death (Ex. 21: 12–14; Num. 35: 30, 31).
5. If any person shall slay another through guile, either by poisoning or other such devilish practice, he shall be put to death (Ex. 21: 14).
6. If any man or woman shall lie with any beast or brute creature, by carnal copulation, they shall surely be put to death, and the beast shall be slain and buried (Lev. 20: 15, 16).
7. If any man lies with mankind as he lies with woman, both of them have committed abomination, they both shall surely be put to death (Lev. 20: 10, 18: 20; Deut. 22: 23, 24).
8. If any person commits adultery with a married or espoused wife, the adulterer and the adulteress shall surely be put to death (Lev. 20: 10, 18: 20; Deut. 22: 23, 24).

9. If any man shall forcibly, and without consent, ravish any maid or woman that is lawfully married or contracted, he shall be put to death (Deut. 22: 25).
10. If any man steals a man or mankind, he shall be put to death (Ex. 21: 16).
11. If any man rise up by false witness, wittingly and of purpose to take away any man's life, he shall be put to death (Deut. 19: 16, 18, 19).
12. If any man shall conspire or attempt any invasion, insurrection, or rebellion against the Commonwealth, he shall be put to death.
13. If any child or children above sixteen years old and of sufficient understanding shall curse or smite their natural father or mother, he or they shall be put to death; unless it can be sufficiently testified that the parents have been very unchristianly negligent in the education of such children, or so provoke them by extreme and cruel correction that they have been forced thereunto to preserve themselves from death, maiming (Ex. 21: 15, 17; Lev. 20).
14. If any man have a stubborn and rebellious son of sufficient years and understanding, viz., sixteen years of age, which will not obey the voice of his father or the voice of his mother, and that when they have chastened him will not hearken unto them, then may his father and mother, being his natural parents, lay hold on him and bring him to the magistrates assembled in Court, and testify unto them that their son is stubborn and rebellious and will not obey their voice, and chastisement, but lives in sundry notorious crimes, such a son shall be put to death (Deut. 21: 20, 21)....

Children

Forasmuch as the good education of children is of singular behoof and benefit to any commonwealth; and whereas many parents and masters are too indulgent and negligent of their duty in that kind: It is therefore ordered by this Court and authorized hereof that the selectmen of every town in the several precincts and quarters where they dwell shall have a vigilant eye over their bretheren and neighbors, to see, first, that none of them shall suffer so much barbarism in any of their families, as not to endeavor to teach by themselves or others their children and apprentices so much learning as may enable them perfectly to read the English tongue, and knowledge of the capital laws, upon penalty of 20 s[hillings] for such neglect therein. Also, that all masters of families do, once a week, at least, catechize their children and servants in the grounds and principles of religion, and if any be unable to do so much, that then, at the least, they procure such children or apprentices to learn some short orthodox catechism, without book, that they may be able to answer to the questions that shall be propounded to them out of such catechisms by their parents or masters, or any of the selectmen where they shall call them to a trial of what they have learned in this kind. And further, that all parents and masters do breed and bring up their children and apprentices in some honest, lawful calling, labor, or employment, either in husbandry or some other trade profitable for themselves and Commonwealth, if they will not nor cannot train them up in learning, to fit them for higher employments. And if any of the selectmen, after admonition by them given to such masters of families, shall find them still negligent of their duty in the particulars aforementioned, whereby children and servants become rude, stubborn, and unruly, the said selectmen, with the help of two magistrates, shall take such children or apprentices from them and place them with such masters for years, boys till they come to twenty-one, and girls, eighteen years of age complete, which will more strictly look unto and force them to submit unto government, according to the rules of this order, if by fair means and former instructions they will not be drawn unto it....

Cruelty

It is ordered by this Court, and authority thereof, that no man shall exercise any tyranny or cruelty toward any brute creatures, which are usually kept for the use of man.

Damages Pretended

Forasmuch as the open contempt of God's Word, and messengers thereof, is the desolating sin of civil states and churches, and that the preaching of the Word by those whom God does send is that chief ordinary means ordained by God for the converting, edifying, and saving the souls of the elect, through the presence and power of the Holy Ghost thereunto promised; and that the ministry of the Word is set up by God in His churches for those holy ends; and accordingly to the respect or contempt of the same, and of those whom God has set apart for His own work and employment, the weal or woe of all Christian states, is much furthered and promoted; It is therefore ordered and decreed, that if any Christian, so called, within this jurisdiction, shall contemptuously bear himself toward the Word preached, or the messengers that are called to dispense the same in any congregation, when he does faithfully execute his service and office therein, according to the Will and Word of God, either by interrupting him in his preaching or by charging him falsely with an error, which he has not taught, in the open face of the church, or like a son of Korah, cast upon his true doctrine, or himself, any reproach to the dishonor of the Lord Jesus, who has sent him, and to the disparagement of that His Holy Ordinance, and making God's ways contemptible and ridiculous, that every such person or persons, whatsoever censure the church may pass, shall, for the first scandal, be convented and reproved openly by the magistrates, at some lecture, and bound to their good behavior. And if a second time they break forth into the like contemptuous carriages, they shall either pay 5 pounds to the public treasure, or stand two hours, openly, upon a block or stool four foot high, upon a lecture day, with a paper fixed on his breast written with capital letters AN OPEN AND OBSTINANTE CONTEMNER OF GOD'S HOLY ORDINANCES, that others may fear and be ashamed of breaking out into the like wickedness.

It is ordered and decreed by this Court, and authority thereof, that wheresoever the ministry of the Word is established, according to the order of the Gospel, throughout this jurisdiction, every person shall duly resort and attend thereunto respectively upon the Lord's Day, and upon such public fast days and days of thanksgiving as are to be generally kept by the appointment of authority. And if any person within this jurisdiction shall, without just and necessary cause, withdraw himself from hearing the public ministry of the Word, after due means of conviction used, he shall forfeit for his absence, from every such public meeting, 5 s[hillings]; all such offenses to be heard and determined by any one magistrate, or more, from time to time.

Forasmuch as the peace and prosperity of churches, and members thereof, as well as civil rights and liberties, are carefully to be maintained; it is ordered by this Court and decreed, that the civil authority here established has power and liberty to see the peace, ordinances, and rules of Christ be observed in every church, according to His Word; as also to deal with any church member in a way of civil justice, notwithstanding any church relation, office, or interest, so it be done in a civil and not in an ecclesiastical way; nor shall any church censure degrade or depose any man from any civil dignity, office, or

authority he shall have in the Commonwealth....

Gaming

Upon complaint of great disorder, by the use of the game called shuffleboard, in houses of common entertainment, whereby much precious time is spent unfruitfully, and much waste of wine and beer occasioned; It is therefore ordered and enacted by the authority of this Court, that no person shall henceforth use the said game of shuffleboard in any such house, nor in any other house used as common for such purpose, upon pain for every keeper of such house to forfeit for every such offence 20 s[hillings]; and for every person playing at the said game in any such house, to forfeit for every such offense 5 s[hillings].; the like penalty shall be for playing in any place at any unlawful game....

Virginia Slave Laws (1660s)

While both African Americans and whites served as indentured servants in the colonies, by the mid-seventeenth century, laws began appearing in Virginia statutes distinguishing between white servants and African American slaves. The excerpts that follow reveal the bondage of African Americans and their treatment as property.

December 1662

Whereas some doubts have arisen whether children got by any Englishman upon a Negro woman should be slave or free, *be it therefore enacted and declared by this present Grand Assembly*, that all children born in this country shall be held bond or free only according to the condition of the mother; and that if any Christian shall commit fornication with a Negro man or woman, he or she so offending shall pay double the fines imposed by the former act.

September 1667

Whereas some doubts have risen whether children that are slaves by birth, and by the charity and piety of their owners made partakers of the blessed sacrament of baptism, should by virtue of their baptism be made free, *it is enacted and declared by this Grand Assembly, and the authority thereof*, that the conferring of baptism does not alter the condition of the person as to his bondage or freedom; that diverse masters, freed from this doubt may more carefully endeavor the propagation of Christianity by permitting children, though slaves, or those of greater growth if capable, to be admitted to that sacrament.

September 1668

Whereas it has been questioned whether servants running away may be punished with corporal punishment by their master or magistrate, since the act already made gives the master satisfaction by prolonging their time by service, *it is declared and enacted by this Assembly* that moderate corporal punishment inflicted by master or magistrate upon a runaway servant shall not deprive the master of the satisfaction allowed by the law, the one being as necessary to reclaim them from persisting in that idle course as the other is just to repair the damages sustained by the master.

October 1669

Whereas the only law in force for the punishment of refractory servants resisting their master, mistress, or overseer cannot be inflicted upon Negroes, nor the obstinacy of many of them be suppressed by other than violent means, *be it enacted and declared by this Grand Assembly* if any slave resists his master (or other by his master's order correcting him) and by the extremity of the correction should chance to die, that his death shall not be accounted a felony, but the master (or that other person appointed by the master to punish him) be acquitted from molestation, since it cannot be presumed that premeditated malice (which alone makes murder a felony) should induce any man to destroy his own estate.

Upon the Burning of Our House (1666)

America's first published American poet was Anne Bradstreet. She wrote about the common experiences—childbirth, death, and so on—of seventeenth-century residents of Massachusetts. This poem vividly recounts the ever-present danger of fire and the effect it had on families.

In silent night when rest I took,
For sorrow near I did not look,
I waken'd was with thund'ring noise
And piteous shrieks of dreadful voice.
That fearful sound of "fire" and "fire,"
Let no man know is my Desire.
I starting up, the light did spy,
And to my God my heart did cry
To straighten me in my Distress
And not to leave me succourless.
Then coming out, behold a space
The flame consume my dwelling place.
And when I could no longer look,
I blest his grace that gave and took,
That laid my goods now in the dust.
Yea, so it was, and so 'twas just.
It was his own; it was not mine.
Far be it that I should repine.
He might of all justly bereft
But yet sufficient for us left.
When by the Ruins oft I past
My sorrowing eyes aside did cast
And here and there the places spy
Where oft I sate and long did lie.
Here stood that Trunk, and there that chest,
There lay that store I counted best,
My pleasant things in ashes lie
And them behold no more shall I.
Under the roof no guest shall sit,
Nor at thy Table eat a bit.
No pleasant talk shall 'ere be told
Nor things recounted done of old.
No Candle 'ere shall shine in Thee,
Nor bridegroom's voice ere heard shall bee.
In silence ever shalt thou lie.
Adieu, Adieu, All's Vanity.
Then straight I 'gin my heart to chide:
And did thy wealth on earth abide,
Didst fix thy hope on mouldring dust,
The arm of flesh didst make thy trust?
Raise up thy thoughts above the sky
That dunghill mists away may fly.
Thou hast a house on high erect
Fram'd by that mighty Architect,
With glory richly furnished
Stands permanent, though this be fled.
It's purchased and paid for too
By him who hath enough to do.
A price so vast as is unknown,
Yet by his gift is made thine own.
There's wealth enough; I need no more.
Farewell, my pelf; farewell, my store.
The world no longer let me love;
My hope and Treasure lies above.

John Eliot and His Work with Native Americans (1670)

In 1646, John Eliot began ministering to the native peoples of New England in their own language, becoming known as the "Apostle to the Indians." He subsequently translated the Bible into Algonquian (1661) and established Native American "praying towns," where he attempted to convert the natives to

both Christianity and the ways of English civilization. The report that follows is Eliot's last narrative on the progress of his evangelization. His efforts were subsequently halted by King Philip's War (1675–1676).

To the Right Worshipful the Commissioners under his Majesties' Great-Seal, for Propagation of the Gospel amongst the poor blind Indians in New-England

Right Worshipful and Christian Gentlemen:

THAT brief Tract of the present state of the Indian-Work in my hand, which I did the last year on the sudden present you with when you call'd for such a thing; That falling short of its end, and you calling for a renewal thereof, with opportunity of more time, I shall begin with our last great motion in that Work done this Summer, because that will lead me to begin with the state of the Indians under the hands of my Brethren Mr. Mahew and Mr. Bourn.

Upon the 17th day of the 6th month, 1670, there was a Meeting at Maktapog near Sandwich in Plimouth-Pattent, to gather a Church among the Indians: There were present six of the Magistrates, and many Elders (all of them Messengers of the Churches within that Jurisdiction) in whose presence, in a day of Fasting and Prayer, they making confession of the Truth and Grace of Jesus Christ, did in that solemn Assembly enter into Covenant, to walk together in the Faith and Order of the Gospel; and were accepted and declared to be a Church of Jesus Christ. These Indians being of kin to our Massachusetts-Indians who first prayed unto God, conversed with them, and received amongst them the light and love of the Truth; they desired me to write to Mr. Leveredge to teach them: He accepted the Motion: and performed the Work with good success; but afterwards he left that place, and went to Long-Island, and there a godly Brother, named Richard Bourne (who purposed to remove with Mr. Leveredge, but hindered by Divine Providence) undertook the teaching of those Indians, and hath continued in the work with good success to this day; him we ordained Pastor: and one of the Indians, named Jude, should have been ordained Ruling-Elder, but being sick at that time, advice was given that he should be ordained with the first opportunity, as also a Deacon to manage the present Sabbath-Day Collections, and other parts of that Office in their season. The same day also were they, and such of their Children as were present, baptized.

From them we passed over to the Vineyard, where many were added to the Church both men and women, and were baptized all of them, and their Children also with them; we had the Sacrament of the Lords Supper celebrated in the Indian-Church, and many of the English-Church gladly joyned with them; for which cause it was celebrated in both languages. On a day of Fasting and Prayer, Elders were ordained, two Teaching-Elders, the one to be a Preacher of the Gospel, to do the Office of a Pastor and Teacher; the other to be a Preacher of the Gospel, to do the Office of a Teacher and Pastor, as the Lord should given them ability and opportunity; Also two Ruling-Elders, with advice to ordain Deacons also, for the Service of Christ in the Church. Things were so ordered by the Lord's guidance, that a Foundation is laid for two Churches more; for first, these of the Vineyard dwelling at too great a distance to enjoy with comfort their Sabbath-communion in one place, Advice was given them, that after some experience of walking together in the Order and Ordinances of the Gospel, they should issue forth into another Church; and the Officers are so chosen, that when they shall do so, both Places are furnished with a Teaching and Ruling-Elder.

Also the Teacher of the Praying Indians of Nantuket, with a Brother of his were received here, who made good Confessions of Jesus Christ; and being asked, did make report unto us that there be about ninety Families who pray unto God in that Island, so effectual is the Light of the Gospel among them. Advice was given, that some of the chief Godly People should joyn to this Church (for they frequently converse together, though the Islands be seven leagues asunder) and after some experience of walking in the Order of the Gospel, they should issue forth into Church-estate among themselves, and have Officers ordained amongst them.

The Church of the Vineyard were desirous to have chosen Mr. Mahew to be their Pastor: but he declined it, conceiving that in his present capacity he lieth under greater advantages to stand their Friend, and do them good, to save them from the hands of such as would bereave them of their Lands, &c., but they shall alwayes have his counsel, instruction and management in all their Church-affairs, as hitherto they have had; he will die in this service of Jesus Christ. The Praying-Indians of both these islands depend on him, as God's Instrument for their good. Advice also was given for the settling of Schools; every Child capable of learning, equally paying, whether he make use of it or no: Yet if any should sinfully neglect Schooling their Youth, it is a transgression liable to censure under both Orders, Civil and Ecclesiastical, the offence being against both. So we walk at Natick.

In as much as now we have ordained Indian Officers unto the Ministry of the Gospel, it is needed to add a word or two of Apology: I find it hopeless to expect English Officers in our Indian Churches; the work is full of hardship, hard labour, and chargeable also, and the Indians not yet capable to give considerable support and maintenance; and Men have bodies, and must live of the Gospel: And what comes from England is liable to hazard and uncertainties. On such grounds as these partly, but especially from the secret wise governance of Jesus Christ, the Lord of the Harvest, there is no appearance of hope for their souls feeding in that way: they must be trained up to be able to live of themselves in the ways of the Gospel of Christ; and through the riches of God's Grace and Love, sundry of themselves who are expert in the Scriptures, are able to teach each other: An English young man raw in that language, coming to teach among our Christian-Indians, would be much to their loss; there be of themselves such as be more able, especially being advantaged that he speaketh his own language, and knoweth their manners. Such English as shall hereafter teach them, must begin with a People that begin to pray unto God (and such opportunities we have many) and then as they grow in knowledge, he will grow (if he be diligent) in ability of speech to communicate the knowledge of Christ unto them. And seeing they must have Teachers amongst themselves, they must also be taught to be Teachers: for which cause I have begun to teach them the Art of Teaching, and I find some of them very capable. And while I live, my purpose is (by the grace of Christ assisting) to make it one of my chief cares and labours to teach them some of the Liberal Arts and Sciences, and the way how to analize, and lay out into particulars both the Works and Word of God; and how to communicate knowledge to others methodically and skilfully, and especially the method of Divinity. There be sundry Ministers who live in an opportunity of beginning with a People, and for time to come I shall cease my importuning of others, and onely fall to perswade such unto this service of Jesus Christ, it being one part of our Ministerial Charge to preach to the World in the Name of Jesus, and from amongst them to gather Subjects to his holy Kingdom. The Bible, and the Catechism drawn out of the Bible, are general helps to all parts and places about us, and are the ground-work of Community amongst all our Indian-Churches and Christians.

I find a blessing, when our Church of Natick doth send forth fit Persons unto some remoter places, to teach them the fear of the Lord. But we want maintenance for that Service; it is chargeable matter to send a Man from his Family: The Labourer is worthy of his Hire: And when they go only to the High-ways and Hedges, it is not to be expected that they should reward them: If they believe and obey their Message, it is enough. We are determined to send forth some (if the Lord will, and that we live) this Autumn, sundry ways. I see the best way is, up and be doing: In all labour there is profit; Seek

and ye shall find. We have Christ's Example, his Promise, his Presence, his Spirit to assist; and I trust that the Lord will find a way for your encouragement.

Natick is our chief Town, where most and chief of our Rulers, and most of the Church dwells; here most of our chief Courts are kept; and the Sacraments in the Church are for the most part here administered: It is (by the Divine Providence) seated well near in the center of all our praying Indians, though Westward the Cords of Christ's Tents are more enlarged. Here we began Civil Government in the year 1650. And here usually are kept the General-Trainings, which seven years ago looked so big that we never had one since till this year, and it was at this time but a small appearance. Here we have two Teachers, John Speen and Anthony; we have betwixt forty and fifty Communicants at the Lord's Table, when they all appear, but now, some are dead, and some decrepid with age; and one under Censure, yet making towards a recovery; one died here the last Winter of the Stone, a temperate, sober, godly man, the first Indian that ever was known to have that disease; but now another hath the same disease: Sundry more are proposed, and in way of preparation to joyn unto the Church.

Ponkipog, or Pakeunit, is our second Town, where the Sachems of the Bloud (as they term the Chief Royal-Line) had their Residence and Rights, which are mostly Alienated to the English Towns: The last Chief Man, off that Line, was last year slain by the Mauquzogs, against whom he rashly (without due Attendants and Assistance, and against Counsel) went; yet all, yea, his Enemies say, He died valiantly; they were more afraid to kill him, than we was to died; yet being deserted by all (some knowingly say through Treason) he stood long, and at last feel alone: Had he had but 10 Men, yea 5 in good order with him, he would have driven all his Enemies before him. His Brother was resident with us in this Town, but he is fallen into sin, and from praying to God. Our Chief Ruler is Ahauton, an old stedfast and trusty friend to the English, and loveth his Country. He is more loved than feared; the reins of his bridle are too long. Waken is sometimes necessarily called to keep Courts here, to add live and zeal in the punishment of Sinners. Their late Teacher, William, is deceased; He was a man of eminent parts, all the English acknowledge him, and he was known to many: He was of a ready wit, sound judgment, and affable; he is gone unto the Lord; And William, the Son of Ahauton, is called to be Teacher in his stead. He is a promising young-man, of a single and upright heart, a good judgment, he Prayeth and Preacheth well, he is studious and industrious, and well accounted of among the English.

Hassunnimesut is the next Town in order, dignity, and antiquity; sundry of our chief Friends in the great work of Praying to God, came from them, and there lived their Progenitors, and there lieth their Inheritance, and that is the place of their desires. It lieth upon Nichmuke River; the people were well known to the English so long as Connecticut Road lay that way, and their Religion was judged to be real by all that travelled that journey, and had occasion to lodge, especially to keep a Sabbath among them. The Ruler of the Town is Anuweekin, and his brother Tuppukkoowillin is Teacher, both sound and godly Men. This Ruler, last Winter, was overtaken with a Passion, which was so observable, that I had occasion to speak with him about it; he was very penitent; I hold him, That as to man, I, and all men were ready to forgive him. Ah! said he, I find it the greatest difficulty to forgive myself. For the encouragement of this place, and for the cherishing of a new Plantation of Praying Indians beyond them, they called Monatunkanet to be a Teacher also in that Town, and both of them to take care of the new Praying-Town beyond them. And for the like encouragement, Captain Gookins joyned Petahheg with Anuweekin. The aged Father of this Ruler and Teacher, was last year Baptized, who hath many Children that fear God. In this place we meditate ere long (if the Lord will, and that we live) to gather a Church, that so the Sabbath-Communion of our Christian Indians may be the more agreeable to the Divine Institution, which we make too bold with while we live at such distance.

Ogquonikongquamesut is the next Town; where, how we have been afflicted, I may not say. The English Town called Marlborough doth border upon them, as did the lines of the Tribes of Judah and Benjamin; the English Meeting-house standeth within the line of the Indian Town, although the contiguity and co-inhabitation is not barren in producing matters of interfering; yet our godly Indians do obtain a good report of the godly English, which is an argument that bringeth light and evidence to my heart, that our Indians are really godly. I was very lately among them; they desired me to settle a stated Lecture amongst them, as it is in sundry other Praying Towns, which I did with so much the more gladness and hope of blessing in it, because through Grace the Motion did first spring from themselves. Solomon is their Teacher, whom we judge to be a serious and sound Christian; their Ruler is Owannamug, whose grave, faithful, and discreet Conversation hath procured him real respect from the English. One that was a Teacher in this place, is the man that is now under Censure in the Church; his sin was that adventitious sin which we have brought unto them, Drunkenness, which was never known to them before they knew us English. But I account it our duty, and it is much in my desire, as well to teach them Wisdom to Rule such heady Creatures, as skill to get them to be able to bridle their own appetites, when they have means and opportunity of high-spirited enticements. The Wisdom and Power of Grace is not so much seen in the beggarly want of these things, as in the bridling of our selves in the use of them. It is true Dominion, to be able to use them, and not to abuse ourselves by them.

Nashope is our next Praying Town, a place of much Affliction; it was the chief place of Residence, where Tahattawans lived, a Sachem of the Blood, a faithful and zealous Christian, a strict yet gentle Ruler; he was a Ruler of 50 in our Civil Order; and when God took him, a chief man in our Israel was taken away from us. His only Son was a while vain, but proved good, except in the Scripture, was Elected to rule in his Father's place, but soon died, insomuch that this place is now destitute of a Ruler. The Teacher of the place is John Thomas, a godly understanding Christian, well esteemed of by the English: his Father was killed by the Mauquaogs, shot to death as he was in the River doing his Eele-wyers. This place lying in the Road-way which the Mauquaogs haunted, was much molested by them, and was one year wholly deserted; but this year the People have taken courage and dwell upon it again.

In this place after the great Earthquake, there was some eruption out of the Earth, which left a great Hiatus or Cleft a great way together, and out of some Cavities under great Rocks, by a great Pond in that place, there was a great while after often heard an humming noise, as if there were frequent eruptions out of the Ground at that place: yet for Healthfulness thee place is much as other places be. For Religion, there be amongst them some Godly Christians, who are received into the Church, and baptized, and others looking that way.

Wamesut is our next Praying-Town; it lyeth at the bottom of the great Falls, on the great River Merymak, and at the falling-in of Concord River; the Sachem of this Place is named Nomphon, said to be a Prince of the Bloud, a Man of a real Noble Spirit: A Brother of his was slain by the Mauquaogs as he was upon a Rock fishing in the great River. In revenge whereof he went in the forementioned rash Expedition, but had such about him, and was so circumspect, that he came well off, though he lost one principal Man. This place is very much annoyed by the Mauquaogs, and have much ado to stand their ground.

In this Place Captain Gookins ordered a Garrison to be kept the last year, which Order while they attended they were safe; but when the Northern Sachems and Souldiers came, who stirred up ours to go with them on their unsuccessful Expedition, the Town was for the most part scatter'd and their

Corn spoyled.

The Teacher of this Place is named George: they have not much esteem for Religion, but I am hopefully perswaded of sundry of them; I can go unto them but once in a year.

Panatuket is the upper part of Merimak-Falls; so called, because of the noise which the Waters make. Thither the Penagwog-Indians are come, and have built a great Fort; Their Sachems refused to pray to God, so signally and sinfully, that Captain Gookins and my self were very sensible of it, and were not without some expectation of some interposure of a Divine-Hand, which did eminently come to pass; for in the forenamed expedition they joyned with the Northern Sachems, and were all of them cut off; even all that had so signally refused to pray unto God were now as signally rejected by God, and cut off. I hear not that it was ever known, that so many Sachems and Men of Note were killed in one imprudent Expedition, and that by a few scattered people; for the Mauquaogs were not imbodyed to received them, nor prepared, and few at home, which did much greaten the Overthrow of so many great Men, and shews a divine over-ruling hand of God. But now, since the Penaguag-Sachems are cut off, the People (sundry of them) dwelling at Panatuket-Fort do bow the ear to hear, and submit to pray unto God; to whom Jethro, after he had confest Christ and was baptized, was sent to preach Christ to them.

Magunkukquok is another of our Praying-Towns at the remotest Westerly borders of Natick; these are gathering together of some Nipmuk Indians who left their own places, and sit together in this place, and have given up themselves to pray unto God. They have called Pomham to be their Ruler, and Simon to be their Teacher. This latter is accounted a good and lively Christian; he is the second man among the Indians that doth experience that afflicting disease of the Stone. The Ruler hath made his Preparatory Confession of Christ, and is approved of, and at the next opportunity is to be received and baptized.

I obtained of the General-Court a Grant of a Tract of Land, for the settlement and encouragement of this People; which though as yet it be by some obstructed, yet I hope we shall find some way to accomplish the same.

Quanasusset is the last of our Praying-Towns, whose beginnings have received too much discouragement; but yet the Seed is alive: they are frequently with me; the work is at the birth, there doth only want strength to bring forth. The care of this People is committed joyntly to Monatunkanit, and Tuppunkoowillin, the Teachers of Hassunemeesut, as is abovesaid; and I hope if the Lord continue my life, I shall have a good account to give of that People.

Thus I have briefly touched some of the chiefest of our present Affairs, and commit them to your Prudence, to do with them what you please; committing your Selves, and all your weighty Affairs unto the Guidance and Blessing of the Lord, I rest, Your Worships to serve you in the Service of our Lord Jesus.

JOHN ELLIOT [sic].

Roxbury, this 20th of the 7th month, 1670.

Probate Inventory of a Plymouth Colony Estate (1672)

This probate inventory of the estate of Ester Woodfeild, from Plymouth Colony, offers insights into the modest household of a woman who owned farm animals, linens, spinning wheels, and various other household implements. She was apparently literate, as evidenced by mention of not only a Bible but other books as well. It is likely that she died intestate, that is, without having left behind a will, since it was customary in such cases for the court to require an inventory and appraisal of the decedent's possessions.

A true Inventory of the estate of Ester Woodfeild of Scittuate lately deceased exhibited to the Court of his Matie holden att Plymouth in New England the fift of June 1672 on the oath of henery Ewell; taken and appraised by Rodulphus Elmes and Steven Vinall; as followeth

Item her purse and apparrell both woolen and linnine 36 [pounds] 00 [shillings] 00 [pence]

Item bookes viz: bibles and other bookes 00 12 00

Item bedds and bedding both woolen and linnine 16 00 00

Item brasse pewter and Iron houshold stuffe 01 15 00

Item Cowes and Calfe mare and Colt and swine 20 00 00

Item three Chistes and Iron tooles 01 15 00

Item Corne meale seiues trenchers baggs and four Caske 01 00 00

Item spining wheelles Cards and Flax 00 18 00

Item bedsteeds Chernes tubb and other Lumber 02 10 00

Apprised by vs

Rodolphus Elmes

Steven Vinall

Marquette's Travels on the Mississippi (1673)

The French Jesuit priests Jacques Marquette and former seminary student Louis Jolliet traveled over 2,500 miles on the Mississippi, preaching to native settlements along the way. Jolliet made maps, and Marquette kept a detailed journal of their observations. On the return trip, Marquette lost his notes, and so wrote his account from memory.

Taken from his *Travels and Discoveries in North America*, Marquette's narrative comments on their diet along the way, animals and vegetation, rock drawings, iron mines, climate, and the hazards of the Mississippi and other waterways, which they monitored for depth using a sounding line. Their expedition ventured as far as the Arkansas and Louisiana border, where, realizing that the river flowed into the Gulf of Mexico and not California, they turned back to avoid capture by the Spanish.

I embarked with M. Joliet, who had been chosen to conduct this enterprise, on the 13th May, 1673, with five other Frenchmen, in two bark canoes. We laid in some Indian corn and smoked beef for our voyage. We first took care, however, to draw from the Indians all the information we could, concerning the countries through which we designed to travel, and drew up a map, on which we marked down the rivers, nations, and points of the compass to guide us in our journey. The first nation we came to was called the Folles-Avoines, or the nation of wild oats. I entered their river to visit them, as I had preached among them some years before. The wild oats, from which they derive their name, grow spontaneously in their country....

I acquainted them with my design of discovering other nations, to preach to them the mysteries of our holy religion, at which they were much surprized, and said all they could to dissuade me from it. They told me I would meet Indians who spare no strangers, and whom they kill without any provocation or mercy; that the war they have one with the other would expose me to be taken by their warriors, as they are constantly on the look-out to surprize their enemies. That the Great River was exceedingly dangerous, and full of frightful monsters who devoured men and canoes together, and that the heat was so great that it would positively cause our death. I thanked them for their kind advice, but told them I would not follow it, as the salvation of a great many souls was concerned in our undertaking, for whom I should be glad to lose my life. I added that I defied their monsters, and their information would oblige us to keep more upon our guard to avoid a surprize. And having prayed with them, and given them some instructions, we set out for the Bay of Puan, where our missionaries had been successful in converting them.... The next day, being the 10th of June, the two guides [Miami] embarked with us in sight of all the village, who were astonished at our attempting so dangerous an expedition. We were informed that at three leagues from the Maskoutens, we should find a river which runs into the Mississippi, and that we were to go to the west-south-west to find it, but there were so many marshes and lakes, that if it had not been for our guides we could not have found it....

Before embarking we all offered up prayers to the Holy Virgin, which we continued to do every morning, placing ourselves and the events of the journey under her protection, and after having encouraged each other, we got into our canoes. The river upon which we embarked is called Mesconsin [Wisconsin]; the river is very wide, but the sand bars make it very difficult to navigate, which is increased by numerous islands covered with grape-vines. The country through which it flows is beautiful; the groves are so dispersed in the prairies that it makes a noble prospect; and the fruit of the trees shows a fertile soil. These groves are full of walnut, oak, and other trees unknown to us in Europe. We saw neither game nor fish, but roebuck and buffaloes in great numbers. After having navigated thirty leagues we discovered some iron mines, and one of our company who had seen such mines before, said these were very rich in ore. They are covered with about three feet of soil, and situate near a chain of rocks, whose base is covered with fine timber. After having rowed ten leagues farther, making forty leagues from the place where we had embarked, we came into the Mississippi on the 17th of June [1673].

The mouth of the Mesconsin [Wisconsin] is in about 42½° N. lat. Behold us, then, upon this celebrated river, whose singularities I have attentively studied. The Mississippi takes its rise in several lakes in the North. Its channel is very narrow at the mouth of the Mesconsin, and runs south until it is affected by very high hills. Its current is slow, because of its depth. In sounding we found nineteen fathoms of water. A little further on it widens nearly three-quarters of a league, and the width continues to be more equal. We slowly followed its course to the south and southeast to the 42°, N. lat. Here we perceived the country change its appearance. There were scarcely any more woods or mountains. The islands are covered with fine trees, but we could not see any more roebucks, buffaloes, bustards, and swans. We met from time to time monstrous fish, which struck so violently against our canoes, that at first we took them to be large trees, which threatened to upset us. We saw also a hideous monster; his head was like that of a tiger, his nose was sharp, and somewhat resembled a wildcat; his beard was long; his ears stood upright; the color of his head was gray; and his neck black. He looked upon us for some time, but as we came near him our oars frightened him away. When we threw our nets into the water we caught an abundance of sturgeons, and another kind of fish like our trout, except that the eyes and nose are much smaller, and they have near the nose a bone like a woman's busk, three inches broad and a foot and a half long, the end of which is flat and broad, and when it leaps out of the water the weight of it throws it on its back.

Having descended the river as far as 41° 28' we found that turkeys took the place of game, and the Pisikious that of other animals. We called the Pisikious wild buffaloes, because they very much resemble our domestic oxen; they are not so long, but twice as large. We shot one of them, and it was as much as thirteen men could do to drag him from the place where he fell....

We continued to descend the river, not knowing where we were going, and having made a hundred leagues without seeing anything but wild beasts and birds, and being on our guard we landed at night to make our fire and prepare our repast, and then left the shore to anchor in the river, while one of us watched by turns to prevent a surprize. We went south and southwest until we found ourselves in about the latitude of 40° and some minutes, having

rowed more than sixty leagues since we entered the river.

We took leave of our guides about the end of June, and embarked in presence of all the village, who admired our birch canoes, as they had never before seen anything like them. We descended the river, looking for another called Pekitanoni [Missouri], which runs from the northwest into the Mississippi....

As we were descending the river we saw high rocks with hideous monsters painted on them, and upon which the bravest Indians dare not look. They are as large as a calf, with head and horns like a goat; their eyes red; beard like a tiger's; and a face like a man's. Their tails are so long that they pass over their heads and between their fore legs, under their belly, and ending like a fish's tail. They are painted red, green, and black. They are so well drawn that I cannot believe they were drawn by the Indians. And for what purpose they were made seems to me a great mystery. As we fell down the river, and while we were discoursing upon these monsters, we heard a great rushing and bubbling of waters, and small islands of floating trees coming from the mouth of the Pekitanoni [Missouri], with such rapidity that we could not trust ourselves to go near it. The water of this river is so muddy that we could not drink it. It so discolours the Mississippi as to make the navigation of it dangerous. This river comes from the northwest, and empties into the Mississippi, and on its banks are situated a number of Indian villages. We judged by the compass, that the Mississippi discharged itself into the Gulf of Mexico. It would, however, have been more agreeable if it had discharged itself into the South Sea or Gulf of California....

Having satisfied ourselves that the Gulf of Mexico was in latitude 31° 40', and that we could reach it in three or four days' journey from the Akansea [Arkansas River], and that the Mississippi discharged itself into it, and not to the eastward of the Cape of Florida, nor into the California Sea, we resolved to return home. We considered that the advantage of our travels would be altogether lost to our nation if we fell into the hands of the Spaniards, from whom we could expect no other treatment than death or slavery; besides, we saw that we were not prepared to resist the Indians, the allies of the Europeans, who continually infested the lower part of this river; we therefore came to the conclusion to return, and make a report to those who had sent us. So that having rested another day, we left the village of the Akansea, on the seventeenth of July, 1673, having followed the Mississippi from the latitude 42° to 34°, and preached the Gospel to the utmost of my power, to the nations we visited. We then ascended the Mississippi with great difficulty against the current, and left it in the latitude of 38° north, to enter another river [Illinois], which took us to the lake of the Illinois [Michigan], which is a much shorter way than through the River Mesconsin [Wisconsin], by which we entered the Mississippi....

Governor William Berkeley on Bacon's Rebellion (1676)

Bacon's Rebellion was the first popular revolt in the British colonies. Led by Nathaniel Bacon, the rebellion was fueled by a perception of disenfranchisement by landowners, heavy taxes, a low financial return on tobacco, and inadequate protection from native raids in Virginia. In this excerpt, Governor Berkeley, who was temporarily overthrown by Bacon, discusses how he resumed control and justifies his assessment of treason on the part of Bacon. The rebel leader died of dysentery in the midst of his campaign.

The declaration and Remonstrance of Sir William Berkeley his most sacred Majesties Governor and Captain Generall of Virginia

Sheweth That about the yeare 1660 Coll. Mathews the then Governor dyed and then in consideration of the service I had don the Country, in defending them from, and destroying great numbers of the Indians, without the loss of three men, in all the time that warr lasted, and in contemplation of the equall and uncorrupt Justice I had distributed to all men, Not onely the Assembly but the unanimous votes of all the Country, concurred to make me Governor in a time, when if the Rebells in England had prevailed, I had certainly dyed for accepting itt, 'twas Gentlemen an unfortunate Love, shewed to me, for to shew myselfe gratefull for this, I was willing to accept of this Governement againe, when by my gracious Kings favour I might have had other places much more profitable, and lesse toylesome then this hath beene. Since that time that I returned into the Country, I call the great God Judge of all things in heaven and earth to witnesse, that I doe not know of any thing relateive to this Country wherein I have acted unjustly, corruptly, or negligently in distributeing equall Justice to all men, and takeing all possible care to preserve their proprietyes, and defend the from their barbarous enimies.

But for all this, perhapps I have erred in things I know not of, if I have I am soe conscious of humane frailty, and my owne defects, that I will not onely acknowledge them, but repent of, and amend them, and not like the Rebell Bacon persist in an error, onely because I have comitted itt, and tells me in diverse of his Letters that itt is not for his honnor to confess a fault, but I am of opinion that itt is onely for divells to be incorrigable, and men of principles like the worst of divells, and these he hath, if truth be reported to me, of diverse of his ex pressions of Atheisme, tending to take away all Religion and Laws.

And now I will state the Question betwixt me as a Governor and Mr. Bacon, and say that if any enimies should invade England, any Councillor Justice of peace or other inferiour officer, might raise what forces they could to protect his Majesties subjects, But I say againe, if after the Kings knowledge of this invasion, any the greatest peere of England, should raise forces against the kings prohibition this would be now, and ever was in all ages and Nations accompted treason. Nay I will goe further, that though this peere was truly zealous for the preservation of his King, and subjects, and had better and greater abillitys then all the rest of his fellow subjects, doe his King and Country service, yett if the King (though by false information) should suspect the contrary, itt were treason in this Noble peere to proceed after the King's prohibition, and for the truth of this I appeale to all the laws of England, and the Laws and constitutions of all other Nations in the world, And yett further itt is declared by this Parliament that the takeing up Armes for the King and Parliament is treason, for the event shewed that what ever the pretence was to seduce ignorant and well affected people, yett the end was ruinous both to King and people, as this will be if not prevented, I doe therefore againe declair that Bacon proceedeing against all Laws of all Nations modern and ancient, is Rebell to his sacred Majesty and this Country, nor will I insist upon the sweareing of men to live and dye togeather, which is treason by the very words of the Law.

Now my friends I have lived 34 yeares amongst you, as uncorrupt and dilligent as ever Governor was, Bacon is a man of two yeares amongst you, his person and qualities unknowne to most of you, and to all men else, by any vertuous action that ever I heard of, And that very action which he boasts of, was sickly and fooleishly, and as I am informed treacherously carried to the dishonnor of the English Nation, yett in itt, he lost more men then I did in three yeares Warr, and by the grace of God will putt mysele to the same daingers and troubles againe when I have brought Bacon to acknowledge the Laws are above him, and I doubt not but by God's assistance to have better success then Bacon hath had, the reason of my hopes are, that I will take Councell of wiser men then my selfe, but Mr. Bacon hath none about him, but the lowest of the people.

Yett I must further enlarge, that I cannot without your helpe, doe any thinge in this but dye in defence of my King, his laws, and subjects, which I will cheerefully doe, though alone I doe itt, and considering my poore fortunes, I can not leave my poore Wife and friends a better legacy then by dyeing for my King and you: for his sacred Majesty will easeily distinguish betweene Mr. Bacons actions and myne, and Kinges have long Armes, either to reward or punish.

Now after all this, if Mr. Bacon can shew one precedens or example where such actings in any Nation what ever, was approved of, I will mediate with the King and you for a pardon, and excuce for him, but I can shew him an hundred examples where brave and great men have beene putt to death for gaineing Victorys against the Comand of their Superiors.

Lastly my most assured friends I would have preserved those Indians that I knew were howery att our mercy, to have beene our spyes and intelligence, to finde out our bloody enimies, but as soone as I had the least intelligence that they alsoe were trecherous enimies, I gave out Commissions to destroy them all as the Commissions themselves will speake itt.

To conclude, I have don what was possible both to friend and enemy, have granted Mr. Bacon three pardons, which he hath scornefully rejected, suppoaseing himsele stronger to subvert then I and you to maineteyne the Laws, by which onely and Gods assisting grace and mercy, all men m[igh]t hope for peace and safety. I will add noe more though much more is still remaineing to Justifie me and condemne Mr. Bacon, but to desier that this declaration may be read in every County Court in the Country, and that a Court be presently called to doe itt, before the Assembly meet, That your approbation or dissatisfaction of this declaration may be knowne to all the Country, and the Kings Councell to whose most revered Judgments itt is submitted.

Given the xxixth [29th] day of May, a happy day in the xxvith [25th] yeare of his most sacred Majesties Reigne, Charles the second, who God grant long and prosperously to Reigne, and lett all his good subjects say Amen.

Protest of German Quakers Against Slavery (1688)

More than any other group, Quakers consistently objected to the practice of slavery in America, even though some of their own members were slaveholders. This resolution from a group in Germantown, Pennsylvania, is the first known condemnation of slavery in the colonies. By 1777, the majority of Quakers were strongly advocating abolition.

These are the reasons why we are against the traffic of men-body, as followeth: Is there any that would be done or handled at this manner? viz., to be sold or made a slave for all the time of his life? How fearful and faint-hearted are many at sea, when they see a strange vessel, being afraid it should be a Turk, and they should be taken, and sold for slaves into Turkey. Now, what is this better done, than Turks do? Yea, rather it is worse for them, which say they are Christians; for we hear that the most part of such negers are brought hither against their will and consent, and that many of them are stolen. Now, though they are black, we cannot conceive there is more liberty to have them slaves, as it is to have other white ones. There is a saying, that we should do to all men like as we will be done ourselves; making no difference of what generation, descent, or colour they are. And those who steal or rob men, and those who buy or purchase them, are they not all alike? Here is liberty of conscience, which is right and reasonable; here ought to be likewise liberty of the body, except of evil-doers, which is another case. But to bring men hither, or to rob and sell them against their will, we stand against. In Europe there are many oppressed for conscience sake; and here there are those oppressed which are of a black colour. And we who know that men must not commit adultery some do commit adultery in others, separating wives from their husbands, and giving them to others: and some sell the children of these poor creatures to other men. Ah! do consider well this thing, you who do it, if you would be done at this manner and if it is done according to Christianity! You surpass Holland and Germany in this thing. This makes an ill report in all those countries of Europe, where they hear of [it], that the Quakers do here handel men as they handel there the cattle. And for that reason some have no mind or inclination to come hither. And who shall maintain this your cause, or plead for it? Truly, we cannot do so, except you shall inform us better hereof, viz.: that Christians have liberty to practice these things. Pray, what thing in the world can be done worse towards us, than if men should rob or steal us away, and sell us for slaves to strange countries; separating husbands from their wives and children. Being now this is not done in the manner we would be done at; therefore, we contradict, and are against this traffic of men-body. And we who profess that it is not lawful to steal, must, likewise, avoid to purchase such things as are stolen, but rather help to stop this robbing and stealing, if possible. And such men ought to be delivered out of the hands of the robbers, and set free as in Europe. Then is Pennsylvania to have a good report, instead, it hath now a bad one, for this sake, in other countries; Especially whereas the Europeans are desirous to know in what manner the Quakers do rule in their province; and most of them do look upon us with an envious eye. But if this is done well, what shall we say is done evil?

If once these slaves (which they say are so wicked and stubborn men,) should join themselves fight for their freedom, and handel their masters and mistresses, as they did handel them before; will these masters and mistresses take the sword at hand and war against these poor slaves, like, as we are able to believe, some will not refuse to do? Or, have these poor negers not as much right to fight for their freedom, as you have to keep them slaves?

Now consider well this thing, if it is good or bad. And in case you find it to be good to handel these blacks in that manner, we desire and require you hereby lovingly, that you may inform us herein, which at this time never was done, viz., that Christians have such a liberty to do so. To the end we shall be satisfied on this point, and satisfy likewise our good friends and acquaintances in our native country, to whom it is a terror, or fearful thing, that men should be handelled so in Pennsylvania.

This is from our meeting at Germantown, held ye 18th of the 2d month, 1688, to be delivered to the monthly meeting at Richard Worrell's.

John Clayton's Report on Virginia (1688)

John Clayton's firsthand report to the Royal Society of London about Virginia was written some two years after Clayton returned to England. Having lost his books and scientific instruments at sea, Clayton draws upon memory and gives detailed observations on the hazardous journey over water, as well as the climate and vegetation of the area. He compares the weather of England and Virginia, being struck by the intense heat of the latter, comments on the effects of thunder and lightning, and describes medicinal cures used in Virginia.

A LETTER FROM Mr. JOHN CLAYTON Rector of Crofton at Wakefield in Yorkshire, TO THE ROYAL SOCIETY, May 12, 1688, giving an Account of several Observables in Virginia, and in his Voyage thither, more particularly concerning the Air.

Having oftentimes been urged to give an Account of Virginia, by several of the Worthy Members of the Royal Society, I cannot but, as far forth as I am able, obey Commands whereby I'm so much honour'd, and shew my Respect by my ready Compliance; tho' I am so sensible of my own Weakness and Incapacity to answer your Expectations, that before-hand I must Apologize for my self. And indeed by Sea I lost all my Books, Chymical Instruments, Glasses and Microscopes, which rendred me uncapable of making those Remarks and Observations I had designed, they were all cast away in Captain Win's Ship, as they were to follow me; and Virginia being a Country where one cannot furnish ones self again with such things, I was discourag'd from making so diligent a Scrutiny as otherwise I might have done, so that I took very few Minutes down in Writing; and therefore, since I have only my Memory to rely on, which too has the Disadvantage of it's own Weakness, and of the Distance of two Years since now I left the Country, if future Relations shall in some small Points, make out my Mistake, I thought this requisite to justify my Candor; for I ever judg'd it villanous to impose in matters of Fact; but Descriptions of things that depend on Memory may be liable to Mistakes; and yet the Sincerity of the Person that delivers them intire. But hereof I shall be as cautious as possible, and shall rather wave some things whereof I have some Doubts, and am uncapable now of satisfying my self, than in any sort presume too far. The Method I design is, first, to give an Account of the Air, and all such Observations as refer thereto; then of the Water, the Earth and Soil; the Birds, the Beasts, the Fishes, the Plants, the Insects; and lastly, the present State of the Inhabitants: But at present I shall neither trouble you nor my self with any more than an Account of what refers to the Air alone, being conscious the honourable Society may receive such a Glut with the Imperfection of this, as to excuse me from a farther Relation.

But before I begin, perhaps it may not be impertinent to acquaint you with some things that happen'd in our Voyage. We sail'd in the Ship Judith, Captain Trim Commander, 'twas Flyboat built, about 200 or 250 Tuns; she sprung a considerable Leak. When the Captain had made long and diligent Search, had tried all Methods that Sea-men use upon such Occasions, or he could think of, all in vain, and that the Leak encreased, he came pensively to consult me. Discoursing with him about it, and understanding that the Ship was cieled within; so that though the Leak might possibly be in the Fore-part, it would fill the whole Cavity betwixt the Cieling and the Planks, and so run into the Hold at all the Crevices of the Cieling up and down: I thereupon conceived, that where it burst in betwixt the Cieling and the Planks, it must needs make some Noise. He told me, they had endeavoured to find it out that Way, and according to custom had clapt Cans to their Ears to hear with; but the working of the Ship, the Tackle and the Sea made such a Noise, that they could discover nothing thereby. I happily bethought my self of the Speaking Trumpet; and having one which I had contrived for some other Conveniences, of a differing Shape from the common Sorts, I bid him take it and apply the broad End to the Side of the Ship, the narrow End to his Ear, and it would encrease his Hearing as much as it augmented the Voice the other Way, and would ward the Ear the too from the Confusion of foreign Noise. Upon the first Application, accordingly they heard it, tho' it happened to be at a considerable Distance; and when they removed the Trumpet nigher, they heard it as if it had been the Current of a mighty River, even so distinctly, as to have Apprehensions of the bigness and figure of the Hole that the Water came in at; so that cutting there the Cieling of the Ship, they immediately stopt the Leak.

In the Sea I saw many little things which the Seamen call Carvels; they are like a Jelly, or Starch that is made with a cast of Blue in it; they Swim like a small Sheeps Bladder above the Water, downwards there are long fibrous Strings, some whereof I have found near half a Yard long. This I take to be a Sort of Sea-Plant, and the Strings its Roots growing in the Sea, as Duck-weed does in Ponds. It may be reckon'd among the Potential Cauteries; for when we were one Day becalm'd, getting some to make Observations thereof, the sportful People rub'd it on one anothers Hands and Faces, and where it touch'd it would make it look very Red, and make it smart worse than a Nettle. In my Return for England we struck a Hauks-bill Turtle, in whose Guts I found many of these Carvels; so that it's manifest they feed thereon. 'Tis commonly asserted by the Seamen, that they can smell the Pines at Virginia several Leagues at Sea before they see Land, but I could receive no Satisfaction as to this Point; I could not discern any such thing when at a moderate Distance, I fear much of this may be attributed to Fancy; for one Day there came three or four full Scent to tell me they were certain they smelt the Pines;

but it afterwards prov'd that we were at that Time two hundred Leagues from the Shoar, so that I was satisfied that was therefore meer Fancy. Indeed we thought, by the general Accounts of the Ship, that we had been just on the Coast, but all were deceived by a Current we me with, that at that Time set about South-East, or East South-East, which when once becalmed we tried thus: We hoised out a Boat, and took one of the Scuttles that covered one of the Hatches of the Ship, tying thereto a great Weight, and a strong long Rope, we let it sink a considerable Depth, and then fastning it to the Boat, it serv'd as an Anchor, that the Boat could not drive: then with the Glass and log Line we found the Current set, as I say, Eastward, at the rate of a Mile and a half an Hour. This Current is of mischievous Consequence, it does not always run one way, but as it sets sometimes as we proved Easterly, so does it as they say, set at other Times Westerly, whereby many Ships have been lost; for then the Ships being before their Accounts, they fall in with the Land before they are aware. Thus one Year many Ships were lost on Cape Hattarassee, and thereabouts.

Of the AIR.

THE Cape called Cape Henry, lies in 36 1/2 of the Northern Latitude. The Air and Temperature of the Seasons is much govern'd by Winds in Virginia, both as to heat and cold, driness and moisture, whose Variations being very notable, I the more lamented the Loss of my Barometers and Thermometers, for considerable Observations might be made thereby, there being often great and suddain Changes. The Nore and Nore-West are very nitrous and piercing, cold and clear, or else stormy. The South-East and South hazy and sultry hot: their Winter is a fine clear Air, and dry, which renders it very pleasant: Their Frosts are short, but sometimes very sharp, that it will freeze the Rivers over three Miles broad; nay, the Secretary of State assured me, it had frozen clever over Potomack River, over against his House, where it is near nine Miles over: I have observed it freezes there the hardest, when from a moist South East, on a sudden the Wind passing by the Nore, a nitrous sharp Nore-West blows; not with high Gusts, but with a cutting brisk Air; and those Vales then that seem to be shelter'd from the Wind, and lie warm, where the Air is most stagnant and moist, are frozen the hardest, and seized the soonest; and there the Fruits are more subject to blast than where the Air has a free Motion. Snow falls sometimes in pretty Quantity, but rarely continues there above a Day or two: Their Spring is about a Month earlier than in England; in April they have frequent Rain, sometimes several short and suddain Gusts. May and June the Heat encreases, and it is much like our Summer, being mitigated with gentle Breezes that rise about nine of the Clock, and decrease and incline as the Sun rises and falls. July and August those Breezes cease, and the Air becomes stagnant that the Heat is violent and troublesome. In September the Weather usually breaks suddenly, and there falls generally very considerable Rains. When the Weather breaks many fall Sick, this being the Time of an endemical Sickness, for Seasonings, Cachexes, Fluxes, Scorbutical Dropsies, Gripes, or the like which I have attributed to this Reason. That by the extraordinary Heat, the Ferment of the Blood being raised too high, and the Tone of the Stomach relaxed, when the Weather breaks the Blood palls, and like over-fermented Liquors is depauperated, or turns eager and sharp, and there's a crude Digestion, whence the named Distempers may be supposed to ensue. And for Confirmation, I have observed the carminative Seeds, such as warm, and whose Oil sheaths the acid humors that ever result from crude Digestions. But Decoctions that retain the Tone of the Stomach, as I suppose, by making the little Glands in the Tunicles of Stomach, squeeze out their Juice (for what is bitter may be as well offensive to the Stomach, as to the Palate) and then Chalibiates that raise the decayed Ferment, are no bad Practice; after which, I conceive, Armoniack Spirits might be very beneficial. But their Doctors are so learned, that I never met with any of them that understood what Armoniack Spirits were: Two or three of them one Time ran me clear down by Consent, that they were Vomitive, and that they never used any thing for that Purpose but Crocus Metallorum, which indeed every House keeps; and if their Finger, as the Saying is, ake but, they immediately give three or four Spoonfuls thereof; if this fail, they give him a second Dose, then perhaps Purge them with fifteen or twenty Grains of the Rosin of Jalap, afterwards Sweat them with Venice Treacle, Powder of Snake-root, or Gascoin's Powder; and when these fail conclamatum est. But to return. 'Tis wonderful what influence the Air has over Men's Bodies, whereof I had my self sad Assurances; for tho' I was in a very close warm Room, where was a Fire constantly kept, yet there was not the least Alteration or Change, whereof I was not sensible when I was sick of the Gripes, of which Distemper I may give a farther Account in it's proper Place. When a very ingenious Gentlewoman was visited with the same Distemper, I had the Opportunity of making very considerable Observations. I stood at the Window, and could view the Clouds arise: for there small black fleeting Clouds will arise, and be swiftly carry'd cross the whole Element; and as these Clouds arose, and came nigher, her Torments were encreased, which were grievous as a labouring Womans; there was not the least Cloud but lamentably affected her, and that at a considerable Distance; but by her Shrieks it seemed more or less, according to the Bigness and nearness of the Clouds. The Thunder there is attended often with fatal Circumstances: I was with my Lord Howard of Effingham the Governor, when they brought Word that one Dr. A. was killed therewith after this Manner. He was Smoaking a Pipe of Tobacco, and looking out at his Window when he was struck dead, and immediately became so stiff, that he did not fall, but stood leaning in the Window, with the Pipe in his Mouth, in the same Posture he was in when struck: But this I only deliver as Report, tho' I heard the same Account from several, without any contradicting it. These things are remarkable, that it generally breaks in at the Gavel End of the Houses, and often kills Persons in, or near the Chimney's Range, darting most fiercely down the Funnel of the Chimney; more especially if there be a Fire (I speak here confusedly of Thunder and Lightning) for when they do any Mischief, the Crash and Lightning are at the same Instant, which must be from the nearness of the Cloud. One Time when the Thunder split the Mast of a Boat at James Town, I saw it break from the Cloud, which it divided in two, and seemed as if it had shot them immediately a Mile asunder, to the Eye: It is dangerous when it thunders standing in a narrow Passage, where there's a thorough Passage, or in a Room betwixt two Windows; tho' several have been kill'd in the open Fields. 'Tis incredible to tell how it will strike large Oaks, shatter and shiver them, sometimes twisting round a Tree, sometimes as if it struck the Tree backwards and forwards. I had noted a fine spreading Oak in James Town Island, in the Morning I saw it fair and flourishing, in the Evening I observed all the Bark of the Body of the Tree, as if it had been artificially peeled off, was orderly spread round the Tree, in a Ring, whose Semidiameter was four Yards, the Tree in the Center; all the Body of the Tree was shaken and split, but its Boughs had all their Bark on; few Leaves were fallen, and those on the Boughs as fresh as in the Morning, but gradually afterwards withered, as on a Tree that is fallen. I have seen several vast Oaks and other Timber Trees twisted, as if it had been a small Willow that a Man had twisted with his Hand, which I could suppose had been done by nothing but the Thunder. I have been told by very serious Planters, that thirty or forty Years since, when the Country was not so open, the Thunder was more fierce, and that sometimes after violent Thunder and Rain, the Roads would seem to have perfect casts of Brimstone; and 'tis frequent after much Thunder and Lightning for the Air to have a perfect sulphureous Smell. Durst I offer my weak Reasons when I write to so great Masters thereof, I should here consider the Nature of Thunder, and compare it with some sulphureous Spirits which I have drawn from Coals, that I could no way condense, yet were inflamable; nay, would burn after they pass'd through Water, and that seemingly fiercer, if they were not over-power'd therewith. I have kept of this Spirit a considerable time in Bladders; and though it appeared as if they were only blown with Air, yet if I let it forth, and fired it with a Match or Candle, it would continue burning till all were spent. It might be worthy Consideration likewise, whether those frequent Thunders proceeded from the Air's being more stagnant, the Motion of the Winds being impeded by the Trees, or whether the Motion of the Winds being obstructed by them below, the Motion might not be more violent aloft; and how far that may promote Inflamability; for Stacks of Hay or Corn that ferment with Moisture, never burn, unless when brisk Winds blow, that agitate and fan the little fermenting Sparks, and often kindle them into an actual Fire. And

Observance of the Meteors there might perhaps not be impertinent, as both what are more rare, and what are more frequent, as of Gosimore in great Abundance, and of those small Cobwebs in a Morning, which some have supposed to be Meteors: Ignes fatui, though there be many boggy Swamps and Marshes, are seldom, if any are seen there. There be frequent little sorts of Whirl-winds, whose Diameter may be sometimes not past two or three Yards, sometimes forty, which whisking round in a Circle, pass along the Earth, according to the Motion of the Cloud, from whence they issue; and as they pass along with their gyrus or circular Motion, they carry aloft the dry Leaves into the Air, which fall again often in places far remote. I have seen them descend in a calm Sun-shine Day, as if they had come from the Heavens in great Showers thereof, so that all the Elements seemed filled therewith. And I could perceive them to descend from on high as far as I could possibly discern a Leaf. I remember a roguish Expression of a Seaman, otherwise silly enough, who wondering thereat, cry'd out, Sure now 'tis manifest there is a World above! And now with them 'tis the Fall of the Leaf. But to proceed, I thought this made it manifest, whence many preternatural Showers have happen'd. I remember at Sir Richard Atherton's in Lancashire, some few Years ago, there fell a great Number of Seeds of Ivy-berries; at first we admir'd what they were, for they were cover'd with a thin Skin that was red, and resembled the Figure of a small Wheat Corn; but afterwards they fully manifested what they were; for many sprouted and took Root. I suppose they were carry'd aloft by some such Whirl-wind, and let fall there. I have purposely gone into the Place where I perceived this Gust, which is notorious enough by the Noise it makes, with rattling the Leaves as it carries them aloft, and have found a fine sharp Breeze of Wind.

Yours, &c.

Commission of Sir Edmund Andros for the Dominion of New England (1688)

The Dominion of New England was a manifestation of the British Crown's tightening of control over the colonies. As governor-in-chief, Edmund Andros, along with his designees, had wide authority over lands stretching from Maryland to Maine. Additionally, the Dominion combined the New England, New York, and New Jersey colonies into one, abolishing their elected assemblies and charters. In 1689, Andros was deposed by Boston colonists.

James the Second by the Grace of God King of England, Scotland France and Ireland Defender of the Faith &c. To our trusty and welbeloved Sr Edmund Andros Knt Greeting: Whereas by our Commission under our Great Seal of England, bearing date the third day of June in the second year of our reign wee have constituted and appointed you to be our Captain Generall and Governor in Cheif in and over all that part of our territory and dominion of New England in America known by the names of our Colony of the Massachusetts Bay, our Colony of New Plymouth, our Provinces of New Hampshire and Main and the Narraganset Country or King's Province. And whereas since that time Wee have thought it necessary for our service and for the better protection and security of our subjects in those parts to join and annex to our said Government the neighboring Colonies of Road Island and Connecticutt, our Province of New York and East and West Jersey, with the territories ... hereunto belonging, as wee do hereby join annex and unite the same to our said government and dominion of New England. Wee therefore reposing especiall trust and confidence in the prudence courage and loyalty of you the said Sir Edmund Andros, out of our especiall grace certain knowledge and meer motion, have thought fit to constitute and appoint as wee do by these presents constitute and appoint you the said Sr Edmund Andros to be our Captain Generall and Governor in Cheif in and over our Colonies of the Massachusetts Bay and New Plymouth, our Provinces of New Hampshire and Main, the Narraganset country or King's Province, our Colonys of Road Island and Connecticutt our Province of New York and East and West Jersey, and of all that tract of land circuit continent precincts and limits in America lying and being in breadth from forty degrees of Northern latitude from the Equinoctiall Line to the River of St. Croix Eastward, and from thence directly Northward to the river of Canada, and in length and longitude by all the breadth aforesaid and throughout the main land from the Atlantick or Western Sea or Ocean on the East part, to the South Sea on the West part, with all the Islands, Seas, Rivers, waters, rights, members, and appurtenances, thereunto belonging (our province of Pensilvania and country of Delaware only excepted), to be called and known as formerly by the name and title of our territory and dominion of New England in America.

And for your better guidance and direction Wee doe hereby require and command you to do & execute all things in due manner, that shall belong unto the said office and the trust wee have reposed in you, according to the severall powers instructions and authoritys mentioned in these presents, or such further- powers instructions and authoritys mentioned in these presents, as you shall herewith receive or which shall at any time hereafter be granted or appointed You under our signet and sign manual or by our order in our Privy Councill and according to such reasonable lawes and statutes as are now in force or such others as shall hereafter be made and established within our territory & dominion aforesaid.

And our will and pleasure is that You the said Sr Edmund Andros having, after publication of these our Letters Patents, first taken the Oath of duly executing the office of our Captain Generall and Governor in Cheif of our said territory and dominion, which our Councill there or any three of them are hereby required authorized and impowered to give and administer unto you, you shall administer unto each of the members of our Councill the Oath for the due execution of their places and trusts.

And Wee do hereby give and grant unto you full power and authority to suspend any member of our Councill from sitting voting and assisting therein, as you shall find just cause for so doing.

And if it shall hereafter at any time happen that by the death, departure out of our said territory, or suspension of any of our Counselors, or otherwise, there shall be a vacancy in our said Councill (any five whereof wee do hereby appoint to be a Quorum) Our will and pleasure is that you signify the same unto us by the first opportunity, that Wee may under our Signet and Sign Manuall constitute and appoint others in their room.

And Wee do hereby give and grant unto you full power and authority, by and with the advise and consent of our said Councill or the major part of them, to

make constitute and ordain lawes statutes and ordinances for the public peace welfare and good governmt of our said territory & dominion and of the people and inhabitants thereof, and such others as shall resort thereto, and for the benefit of us, our heires and successors. Which said lawes statutes and ordinances, are to be, as near as conveniently may be, agreeable to the lawes & statutes of this our kingdom of England: Provided that all such lawes statutes and ordinances of what nature or duration soever, be within three months, or sooner, after the making of the same, transmitted unto Us, under our Seal of New England, for our allowance or disapprobation of them, as also duplicates thereof by the next conveyance.

And Wee do by these presents give and grant unto you full power and authority by and with the advise and consent of our said Councill, or the major part of them, to impose assess and raise and levy rates and taxes as you shall find necessary for the support of the government within our territory and dominion of New England, to be collected and leveyed and to be employed to the uses aforesaid in such manner as to you & our said Councill or the major part of them shall seem most equall and reasonable.

And for the better supporting the charge of the governmt of our said Territory and Dominion, our will and pleasure is and wee do by these presents authorize and impower you the sd Sr Edmund Andros and our Councill, to continue such taxes and impositions as are now laid and imposed upon the Inhabitants thereof; and to levy and distribute or cause the same to be levied and distributed to those ends in the best and most equall manner, untill you shall by & with the advise and consent of our Councill agree on and settle such other taxes as shall be sufficient for the support of our government there, which are to be applied to that use and no other.

And our further will and pleasure is, that all publick money raised or to be raised or appointed for the support of the government within our said territory and dominion be issued out by warrant or order from you by & with the advise and consent of our Councill as aforesaid.

And our will and pleasure is that you shall and may keep and use our Seal appointed by Us for our said territory and dominion.

And Wee do by these presents ordain constitute and appoint you or the Commander in Cheif for the time being, and the Councill of our said territory & dominion for the time being, to be a constant and settled Court of Record for ye administration of justice to all our subjects inhabiting within our said Territory and Dominion, in all causes as well civill as Criminall with full power and authority to hold pleas in all cases, from time to time, as well in Pleas of the Crown and in all matters relateing to the conservation of the peace and punishment of offenders, as in Civill causes and actions between party and party, or between us and any of our subjects there, whether the same do concerne the realty and relate to any right of freehold & inheritance or whether the same do concerne the personality and relate to matter of debt contract damage or other personall injury; and also in all mixt actions which may concern both realty and personalty; and therein after due and orderly proceeding and deliberate hearing of both sides, to give judgement and to award execution, as well in criminall as in Civill cases as aforesaid, so as always that the forms of proceedings in such cases and the judgment thereupon to be given, be as consonant and agreeable to the lawes and statutes of this our realm of England as the present state and condition of our subjects inhabiting within our said Territory and Dominion and the circumstances of the place will admit.

And Wee do further hereby give and grant unto you full power and authority with the advise and consent of our said Councill to erect constitute and establish such and so many Courts of Judicature and public Justice within our said Territory and Dominion as you and they shall think fit and necessary for the determining of all causes as well Criminall as Civill according to law and equity, and for awarding of execution thereupon, with all reasonable and necessary powers authorities fees and privileges belonging unto them.

And Wee do hereby give and grant unto you full power and authority to constitute and appoint Judges and in cases requisite Commissioners of Oyer and Terminer, Justices of the Peace, Sheriffs, & all other necessary Officers and Ministers within our said Territory for the better administration of Justice and putting the lawes in execution, & to administer such oath and oaths as are usually given for the due execution and performance of offices and places and for the clearing of truth in judiciall causes.

And our further will and pleasure is and Wee doe hereby declare that all actings and proceedings at law or equity heretofore had or don or now depending within any of the courts of our said Territory, and all executions thereupon, be hereby confirmed and continued so fare forth as not to be avoided for want of any legall power in the said Courts; but that all and every such judiciall actings, proceeding and execution shall be of the same force effect and virtue as if such Courts had acted by a just and legall authority.

And Wee do further by these presents will and require you to permit Appeals to be made in cases of Error from our Courts in our said Territory and Dominion of New England unto you, or the Commander in Cheif for the time being and the Council, in Civill causes: Provided the value appealed for do exceed the sum of one hundred pounds sterling, and that security be first duly given by the Appellant to answer such charges as shall be awarded in case the first sentence shall be affirmed.

And whereas Wee judge it necessary that all our subjects may have liberty to Appeal to our Royall Person in cases that may require the same: Our will and pleasure is that if either party shall not rest satisfied with the judgement or sentence of you (or the Commander in Cheif for the time being) and the Councill, they may Appeal unto Us in our Privy Councill: Provided the matter in difference exceed the value and summ of three hundred pounds stern and that such Appeal be made within one fortnight after sentence, and that security be likewise duly given by the Appellant to answer such charges as shall be awarded in case the sentence of you (or the Commander in Cheif for the time being) and the Councill be confirmed; and provided also that execution be not suspended by reason of any such appeal unto us.

And Wee do hereby give and graunt unto you full power where You shall see cause and shall judge any offender or offenders in capitall and criminall matters, or for any fines or forfeitures due unto us, fit objects of our mercy, to pardon such offenders and to remit such fines & forfeitures, treason and wilfull murder only excepted, in which case you shall likewise have power upon extraordinary occasions to grant reprieves to the offenders therein untill and to the intent our pleasure may be further known.

And Wee do hereby give and grant unto you the said Sr Edmd Andros by your self your Captains and Commanders, by you to be authorized, full power and authority to levy arme muster command or employ, all persons whatsoever residing within our said Territory and Dominion of New England, and, as occasion shall serve, them to transfers from one place to another for the resisting and withstanding all enemies pyrats and rebels, both at land and sea, and to transfers such forces to any of our Plantations in America or the Territories thereunto belonging, as occasion shall require for the defence of the same against the invasion or attempt of any of our enemies, and then, if occasion shall require to pursue and prosecute in or out of the limits of our said

Territories and Plantations or any of them, And if it shall so please God, them to vanquish; and, being taken, according to the law of arms to put to death or keep and preserve alive, at your discretion. And also to execute martiall law in time of invasion insurrection or warr, and during the continuance of the same, and upon soldiers in pay, and to do and execute all and every other thing which to a Captain Generall doth or ought of right to belong, as fully and amply as any our Captain Generall doth or hath usually don.

And Wee do hereby give and grant unto you full power and authority to erect raise and build within our Territory and Dominion aforesaid, such and so many forts, platformes, Castles, cities, boroughs, towns, and fortifications as you shall judge necessary; and the same or any of them to fortify and furnish with ordnance ammunition and all sorts of armes, fit and necessary for the security & defence of our said territory; and the same again or any of them to demolish or dismantle as may be most convenient.

And Wee do hereby give and grant unto you the said Sr Edmund Andros full power and authority to erect one or more Court or Courts Admirall within our said Territory and Dominion, for the hearing and determining of all marine and other causes and matters proper therein to be heard & determined, with all reasonable and necessary powers, authorities fees and priviledges.

And you are to execute all powers belonging to the place and office of Vice Admirall of and in all the seas and coasts about your Government; according to such commission authority and instructions as you shall receive from ourself under the Seal of our Admiralty or from High Admirall of our Foreign Plantations for the time being.

And forasmuch as divers mutinies & disorders do happen by persons shipped and imployed at Sea, and to the end that such as shall be shipped or imployed at Sea may be better governed and ordered; Wee do hereby give and grant unto you the said Sr Edmund Andros our Captain Generall and Governor in Cheif, full power and authority to constitute and appoint Captains, Masters of Ships, and other Commanders, commissions to execute the law martial, and to use such proceedings authorities, punishment, correction and execution upon any offender or offenders who shall be mutinous seditious, disorderly or any way unruly either at sea or during the time of their abode or residence in any of the ports harbors or bays of our said Territory and Dominion, as the Cause shall be found to require, according to martial law. Provided that nothing herein contained shall be construed to the enabling you or any by your authority to hold plea or have jurisdiction of any offence cause matter or thing committed or don upon the sea or within any of the havens, rivers, or creeks of our said Territory and Dominion under your government, by any Captain Commander Lieutenant Master or other officer seaman soldier or person whatsoever, who shall be in actual service and pay in and on board any of our ships of War or other vessels acting by immediat commission or warrant from our self under the Seal of our Admiralty, or from our High Admirall of England for the time being; but that such Captain Commander Lieut Master officer seaman soldier and other person so offending shall be left to be proceeded against and tryed, as the merit of their offences shall require, either by Commission under our Great Seal of England as the statute of 28 Henry VIII directs, or by commission from our said High Admirall, according to the Act of Parliament passed in the 13th year of the reign of the late King our most dear and most intirely beloved brother of ever blessed memory (entitled An Act for the establishing articles and Orders for the regulating and better governmt of His Matys navys, shippes or warr, and Forces by sea) and not otherwise. Saving only, that it shall and may be lawfull for you, upon such Captains and Commanders refusing or neglecting to execute. Or upon his negligent or undue execution of any the written orders he shall receive from You for our service, & the service of our said Territory and Dominion. to suspend him the said Captain or Commander from the exercise of the said office of Commander and commit him safe custody, either on board his own ship or elsewhere, at the discretion of you, in order to his being brought to answer for the same by commission either under our Great Seal of England or from our said High Admirall as is before expressed. In which case our will and pleasure is that the Captain or Commander so by you suspended shall during his suspension and commitmt be succeeded in his said office, by such commission or Warrant Officer of our said ship appointed by our self or our High Admirall for the time being, as by the known practice and discipline of our Navy doth and ought next to succeed him, as is case of death sickness of other ordinary disability hapning to the Commander of any of our ships & not otherwise; you standing also accountable to us for the truth & importance of the crimes and misdemeanours for which you shall so proceed to the suspending of such our said Captain or Commander. Provided also that all disorders and misdemeanors committed on shore by any Captain Commander, Lieutent, Master, or other officer seaman soldier or person whatsoever belonging to any of our ships of warr or other vessel acting by immediate commission or warrt from our self under the Great Seal of our Admiralty or from our High Adml from England for the time being may be tryed & punished according to the lawes of the place where any such disorders offences and misdemeanors shall be so committed on shore, notwithstanding such offender be in our actual service and borne in our pay on board any such out shippes of warr or other vessels acting by immediate Commission or warrant from ourself or our High Admirall as aforesaid; so as he shall not receive any protection (for the avoiding of justice for such offences committed on shore) from any presence of his being improved in our service at sea.

And Wee do likewise give and grant unto you full power and authority by and with the advice and consent of our said Councill to agree with the planters and inhabitants of our said Territory and Dominion concerning such lands, tenements & hereditaments as now are or hereafter shall be in our power to dispose of, and them to grant unto any person or persons for such terms and under such moderat Quit Rents, Services and acknowledgements to be thereupon reserved unto us as shall be appointed by us. Which said grants are to pass and be sealed by our Seal of New England and (being entred upon record by such officer or officers as you shall appoint thereunto, shall be good and effectual in law against us, our heires and successors.

And Wee do hereby give you full power and authority to appoint so many faires martes and markets as you with the advise of the said Councill shall think fitt.

As likewise to order and appoint within our said Territory such and so many ports harbors, bayes havens and other places for the convenience and security of shipping, and for the better loading and unloading of goods and merchandise as by you with the advice and consent of our Councill shall be thought flit and necessary; and in them or any of them to erect nominal and appoint Custom houses ware houses and officers relating thereto; and them to alter change, place, or displace from time to time, as with the advice aforesaid shall be thought fitt.

And forasmuch as pursuant to the lawes & customes of our Colony of the Massachusetts Bay and of our other Colonies and Probes aforementioned, divers marriages have been made and performs by the Magstrats of our said territory; Our royall will and please is hereby to confirm all the said marriages and to direct that they be held good and valid in the same manner to all intents and purposes whatsoever as if they had been made and contracted according to the lawes established within our kingdom of England.

And Wee do hereby require and command all officers and ministers, civill and military and all other inhabitants of our said Territory and Dominion to be obedient aiding and assisting unto you the said Sr Edmd Andros in the execution of this our commission and of the powers and authorities therein

contained, and upon your death or absence out of our said Territory unto our Lieut. Governor, to whom wee do therefore by these presents give and grant all and singular the powers and authorities aforesaid to be exercised and enjoyed by him in case of your death or absence during our pleasure, or untill your arrival within our said Territory and Dominion; as Wee do further hereby give and grant full power and authority to our Lieut. Governor to do and execute whatsoever he shall be by you authorized and appointed to do and execute, in pursuance of and according to the powers granted to you by this Commission.

And if in the case of your death or absence there be no person upon the place, appointed by us to be Commander in Cheif; our will and pleasure is, that the then' present Councill of our Territory aforesaid, do take upon them the administration of the Governmt and execute this commission and the severall powers and authorities herein contained; and that the first Counselor who shall be at the time of yor death or absence residing within the same, do preside in our said Councill, with such powers and preheminencies as any former President hath used and enjoyed within our said territory, or any other our plantations in America, untill our pleasure be further known, or your arrivall as aforesaid.

And lastly, our will and pleasure is that you the said Sr Edmund Andros shall and may hold exercise and enjoy the office and place of Captain Generall and Governor in Cheif in and over our Territory and Dominion aforesaid, with all its rights members and appurtenances whatsoever, together with all and singular the powers and authorities hereby granted unto you, for and during our will and pleasure.

In Witness whereof Wee have caused these our letters to be made Patents. Witness our self at Westminster the seventh day of Aprill in the fourth year of our reign.

By Writ of Privy Seal

Clerke

The Salem Witch Trial of Susanna Martin (1692)

The Salem witch trials were a low point in the life of the Puritan community of Plymouth. In a climate of hysteria, intolerance, and superstition, the judicial system convicted the innocent on specious evidence. In the end, some twenty individuals were found guilty of witchcraft and executed.

Following is the transcript of the trial of Susanna Martin. The fact that Cotton Mather termed her "one of the most Impudent, Scurrilous, wicked creatures" did not help her case. Convicted of the capital offense of witchcraft, she was hanged on July 19, 1692.

The Tryal of Susanna Martin, At the Court of Oyer and Terminer, Held by Adjournment at Salem, June 29, 1692.

I. Susanna Martin, pleading Not Guilty to the Indictment of Witchcraft brought in against her, there were produced the evidences of many persons very sensibly and grievously Bewitched; who all complaned of the prisoner at the Bar, as the person whom they Believed the cause of their Miseries. And now, as well as in the other Trials, there was an extraordinary endeavour by Witchcrafts, with Cruel and Frequent Fits, to hinder the poor sufferers from giving in their complaints; which the Court was forced with much patience to obtain, by much waiting and watching for it.

II. There was now also an Account given, of what passed at her first examination before the Magistrates. The cast of her eye then striking the Afflicted People to the ground, whether they saw that Cast or no; there were these among other passages between the Magistrates and the Examinee.

Magistrate: Pray, what ails these People?

[Susanna] Martin: I don't know.

Magistrate: But what do you think ails them?

Martin: I don't desire to spend my Judgment upon it.

Magistrate: Don't you think they are Bewitch'd?

Martin: No, I do not think they are.

Magistrate: Tell us your thoughts about them then.

Martin: No, my thoughts are my own when they are in, but when they are out, they are anothers. Their Master—

Magistrate: Their Master? who do you think is their Master?

Martin: If they be dealing in the Black Art, you may know as well as I.

Magistrate: Well, what have you done towards this?

Martin: Nothing at all.

Magistrate: Why, tis you or your Appearance.

Martin: I cannot help it.

Magistrate: Is it not Your Master? How comes your Appearance to hurt these?

Martin: How do I know? He that appeared in the shape of Samuel, a Glorify'd Saint, may Appear in any ones shape.

It was then also noted in her, as in others like her, that if the Afflicted went to approach her, they were flung down to the Ground. And, when she was asked the Reason of it, she said, "I cannot tell; it may be, the Devil bears me more Malice than another."

III. The Court accounted themselves Alarum'd by these things, to Enquire further into the Conversation of the Prisoner; and see what there might occur, to render these Accusations further credible. Whereupon, John Allen, of Salisbury, testify'd, That he refusing, because of the weakness of his Oxen, to Cart some Staves, at the request of this Martin, she was displeased at it; and said, "It had been as good that he had; for his Oxen should never do him much more Service." Whereupon this Deponent said, "Dost thou threaten me, thou old Witch? I'll throw thee into the Brook": Which to avoid, she flew over the Bridge, and escaped. But, as he was going home, one of his Oxen Tired, so that he was forced to Unyoke him, that he might get him home. He then put his Oxen, with many more, upon Salisbury Beach, where Cattle did use to get Flesh. In a few days, all the Oxen upon the Beach were found by their Tracks, to have run unto the mouth of Merrimack-River, and not returned; but the next day they were found come ashore upon Plum-Island. They that sought them used all imaginable gentleness, but they would still run away with a violence that seemed wholly Diabolical, till they came near the mouth of Merrimack-River; when they ran right into the Sea, swimming as far as they could be seen. One of them then swam back again, with a swiftness amazing to the Beholders, who stood ready to receive him, and help up his Tired Carcass: But the Beast ran furiously up into the Island, and from thence, through the Marishes, up into Newbury Town, and so up into the Woods; and there after a while found near Amesbury. So that, of Fourteen good Oxen, there was only this saved: the rest were all cast up, some in one place, and some in another, Drowned.

IV. John Atkinson Testify'd, That he Exchanged a Cow with a Son of Susanna Martin, whereat she muttered, and was unwilling he should have it. Going to Receive this Cow, tho' he Hamstring'd her, and Halter'd her, she of a Tame Creature grew so mad, that they could scarce get her along. She broke all the Ropes that were fastned unto her, and though she were Ty'd fast unto a Tree, yet she made her Escape, and gave them such further Trouble, as they could ascribe to no cause but Witchcraft.

V. Bernard Peache testify'd, That being in Bed on a Lords-day Night, he heard a scrabbling at the Window, whereat he then saw Susanna Martin come in, and jump down upon the Floor. She took hold of this Deponents Feet, and drawing his Body up into an Heap, she lay upon him near Two Hours; in all which time he could neither speak nor stirr. At length, when he could begin to move, he laid hold on her Hand, and pulling it up to his mouth, he bit three of her Fingers, as he judged, unto the Bone. Whereupon she went from the Chamber, down the Stairs, out at the Door. This Deponent there-upon called unto the people of the House, to advise them of what passed; and he himself did follow her. The people saw her not; but there being a Bucket at the Left-hand of the Door, there was a drop of Blood found on it; and several more drops of Blood upon the Snow newly fallen abroad. There was likewise the print of her two Feet just without the Threshold; but no more sign of any Footing further off.

At another time this Deponent was desired by the Prisoner, to come unto an Husking of Corn, at her House; and she said, If he did not come, it were better that he did! He went not; but the Night following, Susanna Martin, as he judged, and another came towards him. One of them said, "Here he is!" but he having a Quarter-staff, made a Blow at them. The Roof of the Barn broke his Blow; but following them to the Window, he made another Blow at them, and struck them down; yet they got up, and got out, and he saw no more of them.

About this time, there was a Rumour about the Town, that Martin had a Broken Head; but the Deponent could say nothing to that.

The said Peache also testify'd the Bewitching of Cattle to Death, upon Martin's Discontents.

VI. Robert Downer testified, That this Prisoner being some years ago prosecuted at Court for a Witch, he then said unto her, He believed she was a Witch. Whereat she being dissatisfied, said, That some Shee-Devil would Shortly fetch him away! Which words were heard by others, as well as himself. The Night following, as he lay in his Bed, there came in at the Window the likeness of a Cat, which Flew upon him, took fast hold of his Throat, lay on him a considerable while, and almost killed him. At length he remembered what Susanna Martin had threatned the Day before; and with much striving he cried out, "Avoid, thou Shee-Devil! In the Name of God the Father, the Son, and the Holy Ghost, Avoid!" Whereupon it left him, leap'd on the Floor, and Flew out at the Window.

And there also came in several Testimonies, that before ever Downer spoke a word of this Accident, Susanna Martin and her Family had related, How this Downer had been Handled!

VII. John Kembal testified, that Susanna Martin, upon a Causeless Disgust, had threatned him, about a certain Cow of his, That she should never do him any more Good: and it came to pass accordingly. For soon after the Cow was found stark Dead on the dry Ground, without any Distemper to be discerned upon her. Upon which he was followed with a strange Death upon more of his Cattle, whereof he lost in One Spring to the value of Thirty Pounds. But the said John Kembal had a further Testimony to give in against the Prisoner which was truly admirable.

Being desirous to furnish himself with a Dog, he applied himself to buy one of this Martin, who had a Bitch with Whelps in her House. But she not letting him have his Choice, he said, he would supply himself then at one Blezdels. Having mark'd a puppy which he lik'd at Blezdels, he met George Martin, the Husband of the prisoner, going by, who asked him, Whether he would not have one of his Wives Puppies? and he answered, No. The same Day, one Edmund Eliot, being at Martins House, heard George Martin relate, where this Kembal had been, and what he had said. Whereupon Susanna Martin replied, "If I live, I'll give him Puppies enough!" Within a few Dayes after, this Kembal coming out of the Woods, there arose a little Black Cloud in the N.W. and Kembal immediately felt a Force upon him, which made him not able to avoid running upon the stumps of Trees, that were before him, albeit he had a broad, plain Cart way, before him; but tho' he had his Ax also on his Shoulder to endanger him in his Falls, he could not forbear going out of his way to tumble over them. When he came below the Meeting-House, there appeared unto him a little thing like a Puppy, of a Darkish Colour; and it shot backwards and forwards between his Legs. He had the Courage to use all possible Endeavours of Cutting it with his Ax; but he could not Hit it; the Puppy

gave a jump from him, and went, as to him it seem'd, into the Ground. Going a little further, there appeared unto him a Black Puppy, somewhat bigger than the first, but as Black as a Cole. Its motions were quicker than those of his Ax; it Flew at his Belly, and away; then at his Throat; so, over his Shoulder one way, and then over his Shoulder another way. His heart now began to fail him, and he thought the Dog would have Tore his Throat out. But he recovered himself, and called upon God in his Distress; and Naming the Name of Jesus Christ, it Vanished away at once. The Deponent Spoke not one Word of these Accidents, for fear of affrighting his wife. But the next Morning, Edmond Eliot going into Martins House, this woman asked him where Kembal was? He Replyed, At home, a bed, for ought he knew. She returned, "They say, he was frighted last Night." Eliot asked, "With what?" She answered, "With Puppies." Eliot asked, Where she heard of it, for he had heard nothing of it? She rejoined, "About the Town." Altho' Kembal had mentioned the Matter to no Creature Living.

VIII. William Brown testify'd, that Heaven having blessed him with a most Pious and prudent wife, this wife of his one day mett with Susanna Martin; but when she approch'd just unto her, Martin vanished out of sight, and left her extremely affrighted. After which time, the said Martin often appear'd unto her, giving her no little trouble; and when she did come, she was visited with Birds that sorely peck't and Prick'd her; and sometimes a Bunch, like a pullets egg, would Rise in her throat, ready to Choak her, till she cry'd out, "Witch, you shan't choak me!" While this good Woman was in this Extremity, the Church appointed a Day of Prayer, on her behalf; whereupon her Trouble ceas'd; she saw not Martin as formerly; and the Church, instead of their Fast, gave Thanks for her Deliverance. But a considerable while after, she being Summoned to give in some Evidence at the Court, against this Martin, quickly thereupon this Martin came behind her, while she was milking her Cow, and said unto her, "For thy defaming me at Court, I'll make thee the miserablest Creature in the World." Soon after which, she fell into a strange kind of Distemper, and became horribly Frantick, and incapable of any Reasonable Action; the Physicians declaring, that her Distemper was preternatural, and that some Devil had certainly Bewitched her; and in that Condition she now remained.

IX. Sarah Atkinson testify'd, That Susanna Martin came from Amesbury to their House at Newbury, in an extraordinary Season, when it was not fit for any one to Travel. She came (as she said unto Atkinson) all that long way on Foot. She brag'd and show'd how dry she was; nor could it be perceived that so much as the Soles of her Shoes were wet. Atkinson was amazed at it; and professed, that she should her self have been wet up to the knees, if she had then came so far; but Martin reply'd, She scorn'd to be Drabbled! It was noted, that this Testimony upon her Trial cast her in a very singular Confusion.

X. John Pressy testify'd, That being one Evening very unaccountably Bewildred, near a field of Martins, and several times, as one under an Enchantment, returning to the place he had left, at length he saw a marvellous Light, about the Bigness of an Half-Bushel, near two Rod out of the way. He went, and struck at it with a Stick, and laid it on with all his might. He gave it near forty blows; and felt it a palpable substance. But going from it, his Heels were struck up, and he was laid with his Back on the Ground, Sliding, as he thought, into a Pit; from whence he recover'd, by taking hold on the Bush; altho' afterwards he could find no such Pit in the place. Having, after his Recovery, gone five or six Rod, he saw Susanna Martin standing on his Left-hand, as the Light had done before; but they changed no words with one another. He could scarce find his House in his Return; but at length he got home, extreemly affrighted. The next day, it was upon Enquiry understood, that Martin was in a miserable condition by pains and hurts that were upon her.

It was further testify'd by this Deponent, That after he had given in some Evidence against Susanna Martin, many years ago, she gave him foul words about it; and said, He should never prosper more; particularly, That he should never have more than two Cows; that tho' he were never so likely to have more, yet he should never have them. And that from that very Day to this, namely for Twenty Years together, he could never exceed that Number; but some strange thing or other still prevented his having of any more.

XI. Jervis Ring testified, that about seven years ago, he was oftentimes and grievously Oppressed in the Night, but saw not who Troubled him, until at last he, Lying perfectly Awake, plainly saw Susanna Martin approach him. She came to him, and forceably Bit him by the Finger; so that the Print of the Bite is now so long after to be seen upon him.

XII. But besides all of these Evidences, there was a most wonderful Account of one Joseph Ring, produced on this Occasion.

This man has been strangely carried about by Dæmons, from one Witch-Meeting to another, for near two years together; and for one Quarter of this Time, they have made him and kept him Dumb, tho' he is now again able to speak. There was one T. H. who having, as tis judged, a Design of engaging this Joseph Ring in a Snare of Devillism, contrived a wile, to bring this Ring two Shillings in Debt unto him.

Afterwards, this poor man would be visited with unknown shapes, and this T. H. sometimes among them; which would force him away with them, unto unknown Places, where he saw meetings, Feastings, Dancings; and after his Return, wherein they hurried him along thro' the Air, he gave Demonstrations to the Neighbours, that he had indeed been so transported. When he was brought unto these Hellish meetings, one of the First things they still did unto him, was to give him a knock on the Back, whereupon he was ever as if Bound with Chains, incapable of Stirring out of the place, till they should Release him. He related, that there often came to him a man, who presented him a Book, whereto he would have him set his Hand; promising to him, that he should then have even what he would; and presenting him with all the Delectable Things, persons, and places, that he could imagine. But he refusing to subscribe, the business would end with dreadful Shapes, Noises and Screeches, which almost scared him out of his witts. Once with the Book, there was a Pen offered him, and an Inkhorn with Liquor in it, that seemed like Blood: but he never toucht it.

This man did now affirm, that he saw the Prisoner at several of those Hellish Rendezvouzes.

Note, This Woman was one of the most Impudent, Scurrilous, wicked creatures in the world; and she did now throughout her whole Trial discover herself to be such an one. Yet when she was asked, what she had to say for her self? her Cheef Plea was, That she had Led a most virtuous and Holy Life!

Source: George Lincoln Burr, *Narratives of the Witchcraft Cases, 1648–1706* (New York: Charles Scribner's Sons, 1914).

The Boston gentleman and business leader Thomas Brattle offered his opinion of the Salem proceedings in the following letter to an unknown English minister. He questioned the contradictions in evidence and the scanty proofs used to uncharitably accuse hundreds of witchcraft. Many of those accused were imprisoned, and some twenty were condemned to death. In this missive, Brattle also wrote of the many pious men in the Boston area who questioned the "irregular and dangerous methods" used in the trials.

October 8, 1692.

Reverend Sir,

Your's I received the other day, and am very ready to serve you to my utmost. I should be very loath to bring myself into any snare by my freedom with you, and therefore hope that you will put the best construction on what I write, and secure me from such as would interpret my lines otherwise than they are designed. Obedience to lawfull authority I evermore accounted a great duty; and willingly I would not practise any thing that might thwart and contradict such a principle. Too many are ready to despise dominions, and speak evil of Dignities; and I am sure the mischiefs, which arise from a factious and rebellious spirit, are very sad and notorious; insomuch that I would sooner bite my finger's ends than willingly cast dirt on authority, or any way offer reproach to it: Far, therefore, be it from me, to have any thing to do with those men your letter mentions, whom you acknowledge to be men of a factious spirit, and never more in their element than when they are declaiming against men in public place, and contriving methods that tend to the disturbance of the common peace. I never accounted it a credit to my cause, to have the good liking of such men. My son! (says Solomon) fear thou the Lord and the King, and meddle not with them that are given to change. Prov[verbs]. xxiv. 21. However, Sir, I never thought Judges infallible; but reckoned that they, as well as private men, might err; and that when they were guilty of erring, standers by, who possibly had not half their judgment, might, notwithstanding, be able to detect and behold their errors. And furthermore, when errors of that nature are thus detected and observed, I never thought it an interfering with dutifullness and subjection for one man to communicate his thoughts to another thereabout; and with modesty and due reverence to debate the premised failings; at least, when errors are fundamental, and palpably pervert the great end of authority and government: for as to circumstantial errors, I must confesse my principle is, that it is the duty of a good subject to cover with his silence a multitude of them. But I shall no longer detain you with my preface, but passe to some things you look for, and whether you expect such freedom from me, yea or no, yet shall you find, that I am very open to communicate my thoughts unto you, and in plain terms to tell you what my opinion is of the Salem proceedings.

First, as to the method which the Salem Justices do take in their examinations, it is truly this: A warrant being issued out to apprehend the persons that are charged and complained of by the afflicted children, (as they are called); said persons are brought before the Justices, (the afflicted being present.) The Justices ask the apprehended why they afflict those poor children; to which the apprehended answer, they do not afflict them. The Justices order the apprehended to look upon the said children, which accordingly they do; and at the time of that look, (I dare not say by that look, as the Salem Gentlemen [S.G.] do) the afflicted are cast into a fitt. The apprehended are then blinded, and ordered to touch the afflicted; and at that touch, tho' not by the touch, (as above) the afflicted ordinarily do come out of their fitts. The afflicted persons then declare and affirm, that the apprehended have afflicted them; upon which the apprehended persons, tho' of never so good repute, are forthwith committed to prison, on suspicion for witchcraft. One of the Salem Justices was pleased to tell Mr. Alden, (when upon his examination) that truly he had been acquainted with him these many years; and had always accounted him a good man; but indeed now he should be obliged to change his opinion. This, there are more than one or two did hear, and are ready to swear to, if not in so many words, yet as to its natural and plain meaning. He saw reason to change his opinion of Mr. Alden, because that at the time he touched the poor child, the poor child came out of her fitt.

I suppose his Honour never made the experiment, whether there was not as much virtue in his own hand, as there was in Mr. Alden's, to cure by a touch. I know a man that will venture two to one with any Salemite whatever, that let the matter be duly managed, and the afflicted person shall come out of her fitt upon the touch of the most religious hand in Salem. It is worthily noted by some, that at some times the afflicted will not presently come out of their fitts upon the touch of the suspected; and then, forsooth, they are ordered by the Justices to grasp hard, harder yet, etc. insomuch that at length the afflicted come out of their fitts; and the reason is very good, because that a touch of any hand, and processe of time, will work the cure; infallibly they will do it, as experience teaches.

I cannot but condemn this method of the Justices, of making this touch of the hand a rule to discover witchcraft; because I am fully persuaded that it is sorcery, and a superstitious method, and that which we have no rule for, either from reason or religion. The Salem Justices, at least some of them, do assert, that the cure of the afflicted persons is a natural effect of this touch; and they are so well instructed in the Cartesian philosophy, and in the doctrine of effluvia, that they undertake to give a demonstration how this touch does cure the afflicted persons; and the account they give of it is this; that by this touch, the venomous and malignant particles, that were ejected from the eye, do, by this means, return to the body whence they came, and so leave the afflicted persons pure and whole. I must confesse to you, that I am no small admirer of the Cartesian philosophy; but yet I have not so learned it. Certainly this is a strain that it will by no means allow of.

I would fain know of these Salem Gentlemen, but as yet could never know, how it comes about, that if these apprehended persons are witches, and, by a look of the eye, do cast the afflicted into their fitts by poisoning them, how it comes about, I say, that, by a look of their eye, they do not cast others into fitts, and poison others by their looks; and in particular, tender, fearfull women, who often are beheld by them, and as likely as any in the whole world to receive an ill impression from them. This Salem philosophy, some men may call the new philosophy; but I think it rather deserves the name of Salem superstition and sorcery, and it is not fitt to be named in a land of such light as New-England is. I think the matter might be better solved another way; but I shall not make any attempt that way, further than to say, that these afflicted children, (as they are called,) do hold correspondence with the devill, even in the esteem and account of the S.G.; for when the black man, i.e. (say these gentlemen,) the Devill, does appear to them, they ask him many questions, and accordingly give information to the inquirer; and if this is not holding correspondence with the devill, and something worse, I know not what is.

But furthermore, I would fain know of these Salem Justices what need there is of further proof and evidence to convict and condemn these apprehended persons, than this look and touch, if so be they are so certain that this falling down and arising up, when there is a look and a touch, are natural effects of the said look and touch, and so a perfect demonstration and proof of witchcraft in those persons. What can the Jury or Judges desire more, to convict any man of witchcraft, than a plain demonstration, that the said man is a witch? Now if this look and touch, circumstanced as before, be a plain

demonstration, (as their Philosophy teaches,) what need they seek for further evidences, when, after all, it can be but a demonstration?

But let this pass with the S.G. for never so plain and natural a demonstration; yet certain is it, that the reasonable part of the world, when acquainted herewith, will laugh at the demonstration, and conclude that the said S.G. are actually possessed, at least, with ignorance and folly.

I most admire that Mr. N. N. the Reverend Teacher at Salem, who was educated at the School of Knowledge, and is certainly a learned, a charitable, and a good man, though all the devils in Hell, and all the possessed girls in Salem, should say to the contrary; at him, (I say,) I do most admire; that he should cry up the above mentioned philosophy after the manner that he does. I can assure you, that I can bring you more than two, or twice two, (very credible persons) that will affirm, that they have heard him vindicate the above mentioned demonstration as very reasonable.

Secondly, with respect to the confessours, (as they are improperly called,) or such as confesse themselves to be witches, (the second thing you inquire into in your letter), there are now about fifty of them in Prison; many of which I have again and again seen and heard; and I cannot but tell you, that my faith is strong concerning them, that they are deluded, imposed upon, and under the influence of some evill spirit; and therefore unfit to be evidences either against themselves, or any one else. I now speak of one sort of them, and of others afterward.

These confessours, (as they are called) do very often contradict themselves, as inconsistently as is usual for any crazed, distempered person to do. This the S.G. do see and take notice of; and even the Judges themselves have, at some times, taken these confessours in flat lyes, or contradictions, even in the Courts; By reason of which, one would have thought, that the Judges would have frowned upon the said confessours, discarded them, and not minded one tittle of any thing that they said; but instead thereof, (as sure as we are men,) the Judges vindicate these confessours, and salve their contradictions, by proclaiming, that the Devill takes away their memory, and imposes upon their brain. If this reflects any where, I am very sorry for it: I can but assure you, that, upon the word of an honest man, it is truth, and that I can bring you many credible persons to witness it, who have been eye and ear witnesses to these things.

These confessours then, at least some of them, even in the Judges' own account, are under the influence of the Devill; and the brain of these Confessours is imposed upon by the Devill, even in the Judges' account. But now, if, in the Judges' account, these confessours are under the influence of the Devill, and their brains are affected and imposed upon by the Devill, so that they are not their own men, why then should these Judges, or any other men, make such account of, and set so much by, the words of these Confessours, as they do? In short, I argue thus:

If the Devill does actually take away the memory of them at some times, certainly the Devill, at other times, may very reasonably be thought to affect their fancies, and to represent false ideas to their imagination. But now, if it be thus granted, that the Devill is able to represent false ideas (to speak vulgarly) to the imaginations of the confessours, what man of sense will regard the confessions, or any of the words, of these confessours?

The great cry of many of our neighbours now is, What, will you not believe the confessours? Will you not believe men and women who confesse that they have signed to the Devill's book? that they were baptized by the Devill; and that they were at the mock-sacrament once and again? What! will you not believe that this is witchcraft, and that such and such men are witches, altho' the confessours do own and assert it?

Thus, I say, many of our good neighbours do argue; but methinks they might soon be convinced that there is nothing at all in all these their arguings, if they would but duly consider of the premises.

In the mean time, I think we must rest satisfied in it, and be thankfull to God for it, that all men are not thus bereft of their senses; but that we have here and there considerate and thinking men, who will not thus be imposed upon, and abused, by the subtle endeavours of the crafty one.

In the next place, I proceed to the form of their inditements, and the Trials thereupon.

The Inditement runs for sorcery and witchcraft, acted upon the body of such an one, (say M. Warren), at such a particular time, (say April 14, '92.) and at divers other times before and after, whereby the said M. W. is wasted and consumed, pined, etc.

Now for the proof of the said sorcery and witchcraft, the prisoner at the bar pleading not guilty.

1. The afflicted persons are brought into Court; and after much patience and pains taken with them, do take their oaths, that the prisoner at the bar did afflict them: And here I think it very observable, that often, when the afflicted do mean and intend only the appearance and shape of such an one, (say G. Proctour) yet they positively swear that G. Proctour did afflict them; and they have been allowed so to do; as tho' there was no real difference between G. Proctour and the shape of G. Proctour. This, methinks, may readily prove a stumbling block to the Jury, lead them into a very fundamental error, and occasion innocent blood, yea the innocentest blood imaginable, to be in great danger. Whom it belongs unto, to be eyes unto the blind, and to remove such stumbling blocks, I know full well; and yet you and every one else, do know as well as I who do not.

2. The confessours do declare what they know of the said prisoner; and some of the confessours are allowed to give their oaths; a thing which I believe was never heard of in this world; that such as confesse themselves to be witches, to have renounced God and Christ, and all that is sacred, should yet be allowed and ordered to swear by the name of the great God! This indeed seemeth to me to be a grosse taking of God's name in vain. I know the S.G. do say, that there is hopes that the said Confessours have repented; I shall only say, that if they have repented, it is well for themselves; but if they have not, it is very ill for you know who. But then,

3. Whoever can be an evidence against the prisoner at the bar is ordered to come into Court; and here it scarce ever fails but that evidences, of one nature and another, are brought in, tho', I think, all of them altogether aliene to the matter of inditement; for they none of them do respect witchcraft upon the bodies of the afflicted, which is the alone matter of charge in the inditement.

4. They are searched by a Jury; and as to some of them, the Jury brought in, that [on] such or such a place there was a preternatural excrescence. And I wonder what person there is, whether man or woman, of whom it cannot be said but that, in some part of their body or other, there is a preternatural excrescence. The term is a very general and inclusive term.

Some of the S.G. are very forward to censure and condemn the poor prisoner at the bar, because he sheds no tears: but such betray great ignorance in the nature of passion, and as great heedlesnesse as to common passages of a man's life. Some there are who never shed tears; others there are that

ordinarily shed tears upon light occasions, and yet for their lives cannot shed a tear when the deepest sorrow is upon their hearts; and who is there that knows not these things? Who knows not that an ecstasie of Joy will sometimes fetch teares, when as the quite contrary passion will shutt them close up? Why then should any be so silly and foolish as to take an argument from this appearance? But this is by the by. In short, the prisoner at the bar is indited for sorcery and witchcraft acted upon the bodies of the afflicted. Now, for the proof of this, I reckon that the only pertinent evidences brought in are the evidences of the said afflicted.

It is true, that over and above the evidences of the afflicted persons, there are many evidences brought in, against the prisoner at the bar; either that he was at a witch meeting, or that he performed things which could not be done by an ordinary natural power; or that she sold butter to a saylor, which proving bad at sea, and the seamen exclaiming against her, she appeared, and soon after there was a storm, or the like. But what if there were ten thousand evidences of this nature; how do they prove the matter of inditement! And if they do not reach the matter of inditement, then I think it is clear, that the prisoner at the bar is brought in guilty, and condemned, merely from the evidences of the afflicted persons.

The S.G. will by no means allow, that any are brought in guilty, and condemned, by virtue of spectre Evidence, (as it is called,) i.e. the evidence of these afflicted persons, who are said to have spectral eyes; but whether it is not purely by virtue of these spectre evidences, that these persons are found guilty, (considering what before has been said,) I leave you, and any man of sense, to judge and determine. When any man is indited for murdering the person of A. B. and all the direct evidence be, that the said man pistoled the shadow of the said A. B. tho' there be never so many evidences that the said person murdered C. D., E. F. and ten more persons, yet all this will not amount to a legal proof, that he murdered A. B.; and upon that inditement, the person cannot be legally brought in guilty of the said inditement; it must be upon this supposition, that the evidence of a man's pistolling the shadow of A. B. is a legal evidence to prove that the said man did murder the person of A. B. Now no man will be so much out of his wits as to make this a legal evidence; and yet this seems to be our case; and how to apply it is very easy and obvious. As to the late executions, I shall only tell you, that in the opinion of many unprejudiced, considerate and considerable spectatours, some of the condemned went out of the world not only with as great protestations, but also with as good shews of innocency, as men could do.

They protested their innocency as in the presence of the great God, whom forthwith they were to appear before: they wished, and declared their wish, that their blood might be the last innocent blood shed upon that account. With great affection they intreated Mr. C. M. to pray with them: they prayed that God would discover what witchcrafts were among us; they forgave their accusers; they spake without reflection on Jury and Judges, for bringing them in guilty, and condemning them: they prayed earnestly for pardon for all other sins, and for an interest in the pretious blood of our dear Redeemer; and seemed to be very sincere, upright, and sensible of their circumstances on all accounts; especially Proctor and Willard, whose whole management of themselves, from the Goal to the Gallows, and whilst at the Gallows, was very affecting and melting to the hearts of some considerable Spectatours, whom I could mention to you:—but they are executed, and so I leave them.

Many things I cannot but admire and wonder at, an account of which I shall here send you.

And 1. I do admire that some particular persons, and particularly Mrs. Thatcher of Boston, should be much complained of by the afflicted persons, and yet that the Justices should never issue out their warrants to apprehend them, when as upon the same account they issue out their warrants for the apprehending and imprisoning many others.

This occasions much discourse and many hot words, and is a very great scandal and stumbling block to many good people; certainly distributive Justice should have its course, without respect to persons; and altho' the said Mrs. Thatcher be mother in law to Mr. Corwin, who is one of the Justices and Judges, yet if Justice and conscience do oblige them to apprehend others on the account of the afflicted their complaints, I cannot see how, without injustice and violence to conscience, Mrs. Thatcher can escape, when it is well known how much she is, and has been, complained of.

2. I cannot but admire that Mr. H. U. (whom we all think innocent,) should yet be apprehended on this account, and ordered to prison, by a mittimus under Mr. Lynd's his hand, and yet that he should be suffered, for above a fortnight, to be in a private house; and after that, to quitt the house, the town, and the Province, and yet that authority should not take effectual notice of it. Methinks that same Justice, that actually imprisoned others, and refused bail for them on any terms, should not be satisfied without actually imprisoning Mr. U. and refusing bail for him, when his case is known to be the very same with the case of those others.

If he may be suffered to go away, why may not others? If others may not be suffered to go, how in Justice can he be allowed herein?

3. If our Justices do think that Mrs. C. Mr. E. and his wife, Mr. A. and others, were capital offenders, and justly imprisoned on a capital account, I do admire that the said Justices should hear of their escape from prison, and where they are gone and entertained, and yet not send forthwith to the said places, for the surrendering of them, that Justice might be done them. In other Capitalls this has been practised; why then is it not practised in this case, if really judged to be so heinous as is made for?

4. I cannot but admire, that any should go with their distempered friends and relations to the afflicted children, to know what their distempered friends ayl; whether they are not bewitched; who it is that afflicts them, and the like. It is true, I know no reason why these afflicted may not be consulted as well as any other, if so be that it was only their natural and ordinary knowledge that was had recourse to: but it is not on this notion that these afflicted children are sought unto; but as they have a supernatural knowledge; a knowledge which they obtain by their holding correspondence with spectres or evill spirits, as they themselves grant. This consulting of these afflicted children, as abovesaid, seems to me to be a very grosse evill, a real abomination, not fitt to be known in N.E. [New England] and yet is a thing practised, not only by Tom and John—I mean the ruder and more ignorant sort—but by many who professe high, and passe among us for some of the better sort. This is that which aggravates the evil, and makes it heinous and tremendous; and yet this is not the worst of it, for, as sure as I now write to you, even some of our civil leaders, and spiritual teachers, who, (I think,) should punish and preach down such sorcery and wickedness, do yet allow of, encourage, yea, and practise this very abomination.

I know there are several worthy Gentlemen in Salem, who account this practise as an abomination, have trembled to see the methods of this nature which others have used, and have declared themselves to think the practise to be very evill and corrupt; but all avails little with the abettours of the said practice.

A person from Boston, of no small note, carried up his child to Salem, (near 20 miles,) on purpose that he might consult the afflicted about his child; which

accordingly he did; and the afflicted told him, that his child was afflicted by Mrs. Cary and Mrs. Obinson. The man returned to Boston, and went forthwith to the Justices for a warrant to seise the said Obinson, (the said Cary being out of the way); but the Boston Justices saw reason to deny a warrant. The Rev. Mr. I. M. of Boston, took occasion severely to reprove the said man; asking him whether there was not a God in Boston, that he should go to the Devill in Salem for advice; warning him very seriously against such naughty practices; which, I hope, proved to the conviction and good of the said person; if not, his blood will be upon his own head.

This consulting of these afflicted children, about their sick, was the unhappy begining of the unhappy troubles at poor Andover: Horse and man were sent up to Salem Village, from the said Andover, for some of the said afflicted; and more than one or two of them were carried down to see Ballard's wife, and to tell who it was that did afflict her. I understand that the said B. took advice before he took this method; but what pity was it, that he should meet with, and hearken to such bad Counsellours? Poor Andover does now rue the day that ever the said afflicted went among them; they lament their folly, and are an object of great pity and commiseration. Capt. B. and Mr. St. are complained of by the afflicted, have left the town, and do abscond. Deacon Fry's wife, Capt'n Osgood's wife, and some others, remarkably pious and good people in repute, are apprehended and imprisoned; and that that is more admirable, the forementioned women are become a kind of confessours, being first brought thereto by the urgings and arguings of their good husbands, who, having taken up that corrupt and highly pernicious opinion, that whoever were accused by the afflicted, were guilty, did break charity with their dear wives, upon their being accused, and urge them to confesse their guilt; which so far prevailed with them as to make them say, they were afraid of their being in the snare of the Devill; and which, through the rude and barbarous methods that were afterwards used at Salem, issued in somewhat plainer degrees of confession, and was attended with imprisonment. The good Deacon and Captain are now sensible of the error they were in; do grieve and mourn bitterly, that they should break their charity with their wives, and urge them to confesse themselves witches. They now see and acknowledge their rashnesse and uncharitableness, and are very fitt objects for the pity and prayers of every good Christian. Now I am writing concerning Andover, I cannot omit the opportunity of sending you this information; that Whereas there is a report spread abroad the country, how that they were much addicted to Sorcery in the said town, and that there were forty men in it that could raise the Devill as well as any astrologer, and the like; after the best search that I can make into it, it proves a mere slander, and a very unrighteous imputation.

The Rev'd Elders of the said place were much surprized upon their hearing of the said Report, and faithfully made inquiry about it; but the whole of naughtiness, that they could discover and find out, was only this, that two or three girls had foolishly made use of the sieve and scissors, as children have done in other towns. This method of the girls I do not Justifie in any measure; but yet I think it very hard and unreasonable, that a town should lye under the blemish and scandal of sorceryes and conjuration, merely for the inconsiderate practices of two or three girls in the said town.

5. I cannot but admire that the Justices, whom I think to be well-meaning men, should so far give ear to the Devill, as merely upon his authority to issue out their warrants, and apprehend people. Liberty was evermore accounted the great priviledge of an Englishman; but certainly, if the Devill will be heard against us, and his testimony taken, to the siezing and apprehending of us, our liberty vanishes, and we are fools if we boast of our liberty. Now, that the Justices have thus far given ear to the Devill, I think may be mathematically demonstrated to any man of common sense: And for the demonstration and proof hereof, I desire, only, that these two things may be duly considered, viz.

1. That several persons have been apprehended purely upon the complaints of these afflicted, to whom the afflicted were perfect strangers, and had not the least knowledge of imaginable, before they were apprehended.

2. That the afflicted do own and assert, and the Justices do grant, that the Devill does inform and tell the afflicted the names of those persons that are thus unknown unto them.

Now these two things being duly considered, I think it will appear evident to any one, that the Devill's information is the fundamental testimony that is gone upon in the apprehending of the aforesaid people.

If I believe such or such an assertion as comes immediately from the Minister of God in the pulpitt, because it is the word of the everliving God, I build my faith on God's testimony: and if I practise upon it, this my practice is properly built on the word of God: even so in the case before us.

If I believe the afflicted persons as informed by the Devill, and act thereupon, this my act may properly be said to be grounded upon the testimony or information of the Devill. And now, if things are thus, I think it ought to be for a lamentation to you and me, and all such as would be accounted good Christians.

If any should see the force of this argument, and upon it say, (as I heard a wise and good Judge once propose,) that they know not but that God almighty, or a good spirit, does give this information to these afflicted persons; I make answer thereto, and say, that it is most certain that it is neither almighty God, nor yet any good Spirit, that gives this information; and my Reason is good, because God is a God of truth; and the good Spirits will not lye; whereas these informations have several times proved false, when the accused were brought before the afflicted.

6. I cannot but admire that these afflicted persons should be so much countenanced and encouraged in their accusations as they are: I often think of the Groton woman, that was afflicted, an account of which we have in print, and is a most certain truth, not to be doubted of. I shall only say, that there was as much ground, in the hour of it, to countenance the said Groton woman, and to apprehend and imprison, on her accusations, as there is now to countenance these afflicted persons, and to apprehend and imprison on their accusations. But furthermore, it is worthy of our deepest consideration, that in the conclusion, (after multitudes have been imprisoned, and many have been put to death,) these afflicted persons should own that all was a mere fancy and delusion of the Devill's, as the Groton woman did own and acknowledge with respect to herself; if, I say, in after times, this be acknowledged by them, how can the Justices, Judges, or any else concerned in these matters, look back upon these things without the greatest of sorrow and grief imaginable? I confesse to you, it makes me tremble when I seriously consider of this thing. I have heard that the chief judge has expressed himself very hardly of the accused woman at Groton, as tho' he believed her to be a witch to this day; but by such as knew the said woman, this is judged a very uncharitable opinion of the said Judge, and I do not understand that any are proselyted thereto.

Rev'd Sir, these things I cannot but admire and wonder at. Now, if so be it is the effect of my dullness that I thus admire, I hope you will pity, not censure me: but if, on the contrary, these things are just matter of admiration, I know that you will join with me in expressing your admiration hereat.

The chief Judge is very zealous in these proceedings, and says, he is very clear as to all that hath as yet been acted by this Court, and, as far as ever I

could perceive, is very impatient in hearing any thing that looks another way. I very highly honour and reverence the wisdom and integrity of the said Judge, and hope that this matter shall not diminish my veneration for his honour; however, I cannot but say, my great fear is, that wisdom and counsel are withheld from his honour as to this matter, which yet I look upon not so much as a Judgment to his honour as to this poor land.

But altho' the Chief Judge, and some of the other Judges, be very zealous in these proceedings, yet this you may take for a truth, that there are several about the Bay, men for understanding, Judgment, and Piety, inferior to few, (if any,) in N.E. that do utterly condemn the said proceedings, and do freely deliver their Judgment in the case to be this, viz. that these methods will utterly ruin and undo poor N.E. I shall nominate some of these to you, viz. The hon'ble Simon Bradstreet, Esq. (our late Governor); the hon'ble Thomas Danforth, Esq. (our late Deputy Governor); the Rev'd Mr. Increase Mather, and the Rev'd Mr. Samuel Willard. Major N. Saltonstall, Esq. who was one of the Judges, has left the Court, and is very much dissatisfied with the proceedings of it. Excepting Mr. Hale, Mr. Noyes, and Mr. Parris, the Rev'd Elders, almost throughout the whole Country, are very much dissatisfied. Several of the late Justices, viz. Thomas Graves, Esq. N. Byfield, Esq. Francis Foxcroft, Esq. are much dissatisfied; also several of the present Justices; and in particular, some of the Boston Justices, were resolved rather to throw up their commissions than be active in disturbing the liberty of their Majesties' subjects, merely on the accusations of these afflicted, possessed children.

Finally; the principal Gentlemen in Boston, and thereabout, are generally agreed that irregular and dangerous methods have been taken as to these matters.

Sir, I would not willingly lead you into any error, and therefore would desire you to note,

1. That when I call these afflicted "the afflicted children," I would not be understood as though I meant, that all that are afflicted are children: there are several young men and women that are afflicted, as well as children: but this term has most prevailed among us, because of the younger sort that were first afflicted, and therefore I make use of it.
2. That when I speak of the Salem Gentlemen, I would not be understood as tho' I meant every Individual Gentleman in Salem; nor yet as tho' I meant, that there were no men but in Salem that run upon these notions: some term they must have, and this seems not improper, because in Salem this sort of Gentlemen does most abound.
3. That other Justices in the Country, besides the Salem Justices, have issued out their warrants, and imprisoned, on the accusations of the afflicted as aforesaid; and therefore, when I speak of the Salem Justices, I do not mean them exclusively.
4. That as to the above mentioned Judges, that are commissioned for this Court at Salem, five of them do belong to Suffolk county; four of which five do belong to Boston; and therefore I see no reason why Boston should talk of Salem, as tho' their own Judges had had no hand in these proceedings at Salem.

Nineteen persons have now been executed, and one pressed to death for a mute: seven more are condemned; two of which are reprieved, because they pretend their being with child; one, viz. Mrs. Bradbury of Salisbury, from the intercession of some friends; and two or three more, because they are confessours.

The Court is adjourned to the first Tuesday in November, then to be kept at Salem; between this and then will be [the] great assembly, and this matter will be a peculiar matter of their agitation. I think it is matter of earnest supplication and prayer to almighty God, that he would afford his gracious presence to the said assembly, and direct them aright in this weighty matter. Our hopes are here; and if, at this Juncture, God does not graciously appear for us, I think we may conclude that N.E. is undone and undone.

I am very sensible, that it is irksome and disagreeable to go back, when a man's doing so is an implication that he has been walking in a wrong path: however, nothing is more honourable than, upon due conviction, to retract and undo, (so far as may be,) what has been amiss and irregular.

I would hope that, in the conclusion, both the Judges and Justices will see and acknowledge that such were their best friends and advisers as dissuaded from the methods which they have taken, tho' hitherto they have been angry with them, and apt to speak very hardly of them.

I cannot but highly applaud, and think it our duty to be very thankful, for the endeavours of several Elders, whose lips, (I think,) should preserve knowledge, and whose counsel should, I think, have been more regarded, in a case of this nature, than as yet it has been: in particular, I cannot but think very honourably of the endeavours of a Rev'd person in Boston, whose good affection to his country in general, and spiritual relation to three of the Judges in particular, has made him very solicitous and industrious in this matter; and I am fully persuaded, that had his notions and proposals been hearkened to, and followed, when these troubles were in their birth, in an ordinary way, they would never have grown unto that height which now they have. He has as yet met with little but unkindness, abuse, and reproach from many men; but I trust that, in after times, his wisdom and service will find a more universal acknowledgment; and if not, his reward is with the Lord.

Two or three things I should have hinted to you before, but they slipped my thoughts in their proper place.

Many of these afflicted persons, who have scores of strange fits in a day, yet in the intervals of time are hale and hearty, robust and lusty, as tho' nothing had afflicted them. I Remember that when the chief Judge gave the first Jury their charge, he told them, that they were not to mind whether the bodies of the said afflicted were really pined and consumed, as was expressed in the indictment; but whether the said afflicted did not suffer from the accused such afflictions as naturally tended to their being pined and consumed, wasted, etc. This, (said he,) is a pining and consuming in the sense of the law. I add not.

Furthermore: These afflicted persons do say, and often have declared it, that they can see Spectres when their eyes are shut, as well as when they are open. This one thing I evermore accounted as very observable, and that which might serve as a good key to unlock the nature of these mysterious troubles, if duly improved by us. Can they see Spectres when their eyes are shut? I am sure they lye, at least speak falsely, if they say so; for the thing, in nature, is an utter impossibility. It is true, they may strongly fancy, or have things represented to their imagination, when their eyes are shut; and I think this is all which ought to be allowed to these blind, nonsensical girls; and if our officers and Courts have apprehended, imprisoned, condemned, and executed our guiltless neighbours, certainly our error is great, and we shall rue it in the conclusion. There are two or three other things that I have

observed in and by these afflicted persons, which make me strongly suspect that the Devill imposes upon their brains, and deludes their fancye and imagination; and that the Devill's book (which they say has been offered them) is a mere fancye of theirs, and no reality: That the witches' meeting, the Devill's Baptism, and mock sacraments, which they oft speak of, are nothing else but the effect of their fancye, depraved and deluded by the Devill, and not a Reality to be regarded or minded by any wise man. And whereas the Confessours have owned and asserted the said meetings, the said Baptism, and mock Sacrament, (which the S.G. and some others, make much account of) I am very apt to think, that, did you know the circumstances of the said Confessours, you would not be swayed thereby, any otherwise than to be confirmed, that all is perfect Devilism, and an Hellish design to ruine and destroy this poor land: For whereas there are of the said Confessours 55 in number, some of them are known to be distracted, crazed women, something of which you may see by a petition lately offered to the chief Judge, a copy whereof I may now send you; others of them denyed their guilt, and maintained their innocency for above eighteen hours, after most violent, distracting, and draggoning methods had been used with them, to make them confesse. Such methods they were, that more than one of the said confessours did since tell many, with teares in their eyes, that they thought their very lives would have gone out of their bodyes; and wished that they might have been cast into the lowest dungeon, rather than be tortured with such repeated buzzings and chuckings and unreasonable urgings as they were treated withal.

They soon recanted their confessions, acknowledging, with sorrow and grief, that it was an hour of great temptation with them; and I am very apt to think, that as for five or six of the said confessours, if they are not very good Christian women, it will be no easy matter to find so many good Christian women in N.E. But, finally, as to about thirty of these fiftyfive Confessours, they are possessed (I reckon) with the Devill, and afflicted as the children are, and therefore not fitt to be regarded as to any thing they say of themselves or others. And whereas the S.G. do say that these confessours made their Confessions before they were afflicted, it is absolutely contrary to universal experience, as far as ever I could understand. It is true, that some of these have made their confession before they had their falling, tumbling fitts, but yet not absolutely before they had any fitts and marks of possession, for (as the S.G. know full well) when these persons were about first confessing, their mouths would be stopped, and their throats affected, as tho' there was danger of strangling, and afterward (it is true) came their tumbling fitts. So that, I say, the confessions of these persons were in the beginning of their fitts, and not truly before their fitts, as the S.G. would make us believe.

Thus, (Sir,) I have given you as full a narrative of these matters as readily occurs to my mind, and I think every word of it is matter of fact; the several glosses and descants whereupon, by way of Reasoning, I refer to your Judgment, whether to approve or disapprove.

What will be the issue of these troubles, God only knows; I am afraid that ages will not wear off that reproach and those stains which these things will leave behind them upon our land. I pray God pity us, Humble us, Forgive us, and appear mercifully for us in this our mount of distress:

Herewith I conclude, and subscribe myself,

Reverend Sir, your real friend and humble servant,

T. B.

A Poem Recalling the Hanging of a Relative due to the Salem Witch Trials (in 1692; pub. 1857)

The Quaker poet John Greenleaf Whittier was known for his strong interest in the Puritan colonies of New England. His was more than a passing interest, however. He was related to Susanna Martin, who was condemned as a witch and hanged in 1692 as a result of the Salem witch trials.

The "Witch's Daughter" was originally published as a separate poem in 1857, but it was reissued in Whittier's expanded version of the poem as "Mabel Martin: A Harvest Idyl" (1875). This narrative poem captures the flavor of the period leading up to and following the trials and the effect such a judgment would have had on a child of a "witch." Note that it is a fictionalized account; Susanna Martin did not have a daughter named Mabel.

I call the old time back: I bring my lay
In tender memory of the summer day
When, where our native river lapsed away,
We dreamed it over, while the thrushes made
Songs of their own, and the great pine-trees laid
On warm noonlights the masses of their shade.
And she was with us, living o'er again
Her life in ours, despite of years and pain,
The Autumn's brightness after latter rain.
Beautiful in her holy peace as one
Who stands, at evening, when the work is done,
Glorified in the setting of the sun!
Her memory makes our common landscape seem
Fairer than any of which painters dream;
Lights the brown hills and sings in every stream;
For she whose speech was always truth's pure gold

Heard, not unpleased, its simple legends told,
And loved with us the beautiful and old.

I. THE RIVER VALLEY

... Here, in the dim colonial time
Of sterner lives and gloomier faith,
A woman lived, tradition saith,
Who wrought her neighbors foul annoy,
And witched and plagued the county side,
Till at the hangman's hand she died....

III. THE WITCH'S DAUGHTER

But still the sweetest voice was mute
That river-valley ever heard
From lips of maid or throat of bird;
For Mabel Martin sat apart,
And let the hay-mow's shadow fall
Upon the loveliest face of all.
She sat apart, as one forbid,
Who knew that none would condescend
To own the Witch-wife's child a friend.
The seasons scarce had gone their round,
Since curious thousands thronged to see
Her mother at the gallows-tree;
And mocked the prison-palsied limbs
That faltered on the fatal stairs,
And wan lip trembling with its prayers!
Few questioned of the sorrowing child,
Or, when they saw the mother die,
Dreamed of the daughter's agony.
They went up to their homes that day,
As men and Christians justified:
God willed it, and the wretch had died!
Dear God and Father of us all,
Forgive our faith in cruel lies,
Forgive the blindness that denies!
Forgive thy creature when he takes,
For the all-perfect love Thou art,
Some grim creation of his heart.
Cast down our idols, overturn
Our bloody altars; let us see
Thyself in Thy humanity!
Young Mabel from her mother's grave
Crept to her desolate hearth-stone,
And wrestled with her fate alone;
With love, and anger, and despair,
The phantoms of disordered sense,
The awful doubts of Providence!
Oh, dreary broke the winter days,
And dreary fell the winter nights
When, one by one, the neighboring lights
Went out, and human sounds grew still,
And all the phantom-peopled dark
Closed round her hearth-fire's dying spark
And summer days were sad and long,
And sad the uncompanioned eves,
And sadder sunset-tinted leaves,
And Indian Summer's airs of balm;
She scarcely felt the soft caress,
The beauty died of loneliness!
The school-boys jeered her as they passed,
And, when she sought the house of prayer,
Her mother's curse pursued her there.
And still o'er many a neighboring door
She saw the horseshoe's curved charm,

To guard against her mother's harm:
That mother, poor and sick and lame,
Who daily, by the old arm-chair,
Folded her withered hands in prayer;
Who turned, in Salem's dreary jail,
Her worn old Bible o'er and o'er,
When her dim eyes could read no more!
Sore tried and pained, the poor girl kept
Her faith, and trusted that her way,
So dark, would somewhere meet the day.
And still her weary wheel went round
Day after day, with no relief:
Small leisure have the poor for grief.

IV. THE CHAMPION

So in the shadow Mabel sits;
Untouched by mirth she sees and hears,
Her smile is sadder than her tears.
But cruel eyes have found her out,
And cruel lips repeat her name,
And taunt her with her mother's shame.
She answered not with railing words,
But drew her apron o'er her face,
And, sobbing, glided from the place.
And only pausing at the door,
Her sad eyes met the troubled gaze
Of one who, in her better days,
Had been her warm and steady friend,
Ere yet her mother's doom had made
Even Esek Harden half afraid.
He felt that mute appeal of tears,
And, starting, with an angry frown,
Hushed all the wicked murmurs down. "Good neighbors mine," he sternly said,
"This passes harmless mirth or jest;
I brook no insult to my guest.
"She is indeed her mother's child,
But God's sweet pity ministers
Unto no whiter soul than hers.
"Let Goody Martin rest in peace;
I never knew her harm a fly,
And witch or not, God knows—not I." "I know who swore her life away;
And as God lives, I'd not condemn
An Indian dog on word of them."
The broadest lands in all the town,
The skill to guide, the power to awe,
Were Harden's; and his word was law.
None dared withstand him to his face,
But one sly maiden spake aside:
"The little witch is evil-eyed!" "Her mother only killed a cow,
Or witched a churn or dairy-pan;
But she, forsooth, must charm a man!"

V. IN THE SHADOW

Poor Mabel, homeward turning, passed
The nameless terrors of the wood
And saw, as if a ghost pursued,
Her shadow gliding in the moon;
The soft breath of the west-wind gave
A chill as from her mother's grave.
How dreary seemed the silent house!
Wide in the moonbeams' ghastly glare
Its windows had a dead man's stare!
And, like a gaunt and spectral hand,
The tremulous shadow of a birch
Reached out and touched the door's low porch,

As is to lift its latch; hard by,
A sudden warning call she heard,
The night-cry of a boding bird.
She leaned against the door; her face,
So fair, so young, so full of pain,
White in the moonlight's silver rain.
The river, on its pebbled rim,
Made music such as childhood knew;
The door-yard tree was whispered through
By voices such as childhood's ear
Had heard in moonlights long ago;
And through the willow-boughs below... She strove to drown her sense of wrong,
And, in her old and simple way,
To teach her bitter heart to pray.
Poor child ! the prayer, begun in faith,
Grew to a low, despairing cry
Of utter misery: "
Let me die!"
Oh! take me from the scornful eyes,
And hide me where the cruel speech
And mocking finger may not reach!"
I dare not breathe my mother's name:
A daughter's right I dare not crave
To weep above her unblest grave!"
Let me not live until my heart,
With few to pity, and with none
To love me, hardens into stone."O God ! have mercy on Thy child,
Whose faith in Thee grows weak and small,
And take me ere I lose it all!"
A shadow on the moonlight fell,
And murmuring wind and wave became
A voice whose burden was her name ...

Raising Colonial Children (1699)

In this essay, Cotton Mather gives moral guidance to his congregation, recognizing that parents need to exercise authority over their children to help maintain an orderly society. He urges parents to be examples to their children and to raise them in faith. Beyond their spiritual health, parents are exhorted to instruct children in civility and ensure that they can read and write. Widowed three times and the father of sixteen children, Mather well understood the responsibilities of parenthood.

The Duties of Parents to Their Children

I know him, That he will command his Children And his Household after him, And they shall keep the way of the Lord. (Gen[esis]. 18:19)

As the Great God, who at the Beginning said, Let Us make man after our Image, hath made man a Sociable creature, so it is evident, That Families are the Nurseries of all Societies; and the First combinations of mankind. Well-ordered Families naturally produce a Good Order in other Societies. When Families are under an ill Discipline, all other Societies being therefore ill Disciplined, will feel that Error in the First Concoction.

To Serve the Families of our Neighborhood, will be a Service to all our Interests. Every serious Christian is concerned, That he may be Serviceable in the World; And many a serious Christian is concerned, because he sees himself to be furnished with no more Opportunities to be Serviceable.

But art thou not a Member of some Family? If that Family may by thy means, O Christian, become a Well-regulated Family, in that point thou wilt become Serviceable; I had almost said, Incomprehensibly Serviceable.

They that have the Government of some Family, do make up no Little part of this Great Assembly. And, Sirs, are there any of you, that would forfeit that Honorable Title, of all the Faithful, The Children of Abraham? Give your Attention, ye Children of Abraham, while I set before you, the Example of your Father for your imitation.

Our Glorious Lord-Messiah, is here going to Communicate unto Abraham some of His Heavenly Counsels. And we have a Text before us, that assigns a Reason for that gracious Communication. The Reason is, the care which this Good man, would thereupon take to bring up his Family in the Fear of God.

In this Text there are some Remarkable Things; and things that some Wise men have often remarked. There was an Excellent man, sometimes a Preacher of the Lord Jesus Christ, in this very place; whose custom it was, not only to Read a portion of the Scripture before his Prayers with his Family, but also to Infer and Apply brief Notes out of what he Read. He professed, That he found none of all his weary Studies in Divinity, so profitable to him, as this one Exercise, for the Rare and Rich Thoughts, which he therein found himself supplied withal, And he Declared, "that he looked on it as an accomplishment of this very word; Shall I hide from Abraham, the thing which I do? I know him, that he will command his Children, and his Household.

Moreover, You may here Observe a most comfortable Connection, between, He will, and They Shall. Say's the Lord, He will Command his Children, and They shall keep the way of the Lord. It seems, If every one that is Owner of a Family, would faithfully Command, and manage those that belong unto him, through the Blessing of God, they would generally Keep His Way, and His Law.

I find a famous Writer in the Church, therefore thus expressing himself; 'If Parents did their Duties as they ought, the Word Publically Preached would not be the ordinary means of Regeneration in the Church, but only without the Church, among Infidels:' God would so pour out His Grace upon the Children of His people, and Hear Prayers for them, and bless Endeavours for their Holy Education, that we should see the Promises made Good unto our Seed."

We will now Dismiss these Reflections; and Repair to that Grand Case, which hence offers itself unto us.

The Case

What May Be Done by Pious Parents, to Promote the Piety and Salvation of Their Children?

The Case Inquires, What may be done? You will take it for granted, that the Answer to it will tell you, What Should be done? For you will readily grant, that in such an Important Case as this, All that May be done, Should be done!

In the Case We Inquire after what is to be done, by Pious Parents. Other Parents will take no due Notice, of the Injunctions that God has Laid upon them concerning their Children.

Parents, If you don't first become yourselves Pious, you will do nothing to purpose to make your Children so.

Except you do yourselves walk in the Way of the Lord, you will be very careless about bringing your Children to such a Walk.

It is not a Cain, or a Cham, or any Enemy of God; that will do anything to make his Children become the Children of God. The Psalmist in Psal[ms]. 34:1, 4, 11, could first say I will bless the Lord and I sought the Lord, and then he says, Come ye Children, and I will teach you the Fear of the Lord.

O Parents, In the Name of God, Look after your own miserable Souls; How should those wretched people do anything for the Souls of their Children, that never did anything for their own?

In the Case, we Inquire, after what is to be done by Parents for their Children. But let it be Remembered, That our Servants [others in our home] are in some sort likewise our Children. Our whole Household, as well as the Children that are our Offspring, are to be taught the Way of the Lord. An Abraham will have his Trained Servants. We read concerning a certain Person of Quality, in 2 Ki[ngs]. 5:13. His servants came near and spake unto him, and said, My Father.

Let not those of my Hearers, that are without such Invaluable Blessings of God, as Children, count themselves unconcerned in our Discourse, if they have any Servants under them. A considerable part of what is to be done for our Children, I pray, Masters, think, as we go along; Think, without our particular inculcation, whether nothing. This may be done for your Servants: and, God make Eliezers of them for you!

Attend Now to the Counsils of God

I. Parents, Consider the Condition of your Children; and the loud cry of their Condition unto you, to Endeavour their Salvation! What an Army of powerful Thoughts, do at once now show themselves, to besiege your Hearts, and subdue them unto a just care for the Salvation of your Children!

Know you not, that your Children have precious and Immortal Souls within them? They are not all Flesh. You that are the Parents of their Flesh, must know, That your Children have Spirits also, whereof you are told, in Heb[rews]. 12:9. God is the Father of them; and in Eccles[iastes]. 12:7. God is the Giver of them.

The Souls of your Children, must survive their Bodies, and are transcendently Better and Higher & Nobler Things than their Bodies. Are you solicitous that their Bodies may be Fed? You should be more solicitous that their Souls may not be Starved, or go without the Bread of Life.

Are you solicitous that their Bodies may be Cloath'd: you should be more solicitous that their Souls may not be Naked, or go without the Garments of Righteousness.

Are you Loath to have their Bodies Labouring under Infirmities, or Deformaties? You should be much more Loath to have their Souls pining away in their Iniquities.

Man, Are thy Children, but the Children of Swine? If thou art Regardless of their Souls, truly thou dost call them so!

One of the Ancients, namely Cyprian, has a pungent comparison for this matter; Pray, Consider; (said that Great man) He that minds his Childs Body more than his Soul, is like, one, that if his Child and his Dog were like to be drowned, should be solicitous to save his Dog, but let the Child perish in the water.

How deaf art thou, that thou dost not hear a loud cry from the Souls of thy Children in thine Ears, Oh, my Father, my Mother, look after me!

But more than so; Don't you know, That your Children, are the Children of Death, and the Children of Hell, and the Children of Wrath, by Nature: And that

from you, this Nature is derived and conveyed unto them!

You must know, Parents, that your Children are by your means Born under the dreadful Wrath of God: And if they are not New-Born before they die, it had been Good for them, that they never had been Born at all.

The law of equity was in Exodus 21:19 If one man wound another, he shalt cause him to be throughly healed. Your Children are born with deadly wounds of Sin upon their Souls; and they may Thank you for those wounds: Unjust men, will you now do nothing for their Healing?

Man, thy Children are dying of an horrid poison, in their Bowels; and it was thou that poison'd them. What! Wilt thou do nothing for the succour [help]! Thy Children are thrown into a Devouring Fire; and it is from thee that the Fiery Vengeance of God has taken Hold of them. What! Wilt thou do nothing to Help them out!

There is a Corrupt Nature in thy children, which is a Fountain of all Wickedness and Confusion. The very Pagans were not insensible of this Corrupt Nature; they styled it our Congenite [congenital] Sin, and our Domestick Evil, and cried out, with Tully, "*Simul ac Editi sumus in Lucem, ac suscepti, in omni continue pravitare versamur.*"

The Jews have been yet more Sensible of this Corrupt Nature; they have Stil'd it, our Evil Frame and the poison of the old Serpent; and This they understand by The Enemy, so often mentioned in the Scripture; And, The Heart of Stone and, the Wicked that watches the Righteous.

Will not you that are Christians, then show your Christianity, by Sensibly doing what you can, that your Children may have a Better Nature infused into them?

What shall I Say? I may say, The Time would fail me to mention a thousandth part of what might be said. But, in short: Is it not a sad Thing to be the Father of a fool?

Alas, man, till thy Children become Regenerate, thou art the Father of a Fool; Thy Children are but the Wild Asses Colt! I add; would it not Break thy Heart, if thy Children, were in Slavery to Turks, or Moors, or Indians?

Devils are worse than Indians, and Infidels: till thy Children are brought home to God, they are the slaves of Devils.

In a word; Can thy Heart Endure, that thy Children, should be Banished from the Lord Jesus Christ, and Languishing under the Torments of Sin among Devils, in outer Darkness throughout Eternal Ages?

Don't call thyself a Parent; Thou art an Ostrich [they care not for their offspring]. Call not these, the Children of thy Bowels; thou hast no Bowels! I will not say, that Zipporah call'd her Husband, A Bloody Husband. But all the Angels in Heaven call thee, A Bloody Father, and A Bloody Mother; and are astonished at the Adamantine Hardness of that Bloody Heart of thine; and those Heartstrings that are Sinewes of Iron!

II. Improve the Baptism of your children, as an obligation, and an encouragement unto you, parents, to endeavour the salvation of your Baptised little ones.

Of your children, you may say, with Jacob, in Gen[esis]. 33:5 These are the children that God hath graciously given to me. Now, will not you heartily give back those children to God again: their Baptism is to be the sign and seal of your doing so.

You generally bring your infant children unto the Baptism of the Lord: I suppose, it is because you are satisfied, that the children of believers were in the Covenant with God, in the days of the Old Testament; and, that the children of believers then had a right unto the initial seal of the Covenant, and, that in the days of the New Testament they have not lost this privilege.

Well, but when you bring your children to the Sacred Baptism, what is it for? Oh, let it not be done, as an empty formality; as if the Baptism of your children were for nothing, but only a formal and a pompous putting of a name upon them.

No, but let the serious language of your souls, in this action, be that of Hannah, in 1 Sam[uel] 1:28: I have given this child unto the Lord, as long as he lives, he shall be given unto the Lord.

I find in the private writings of an holy man, who died in this place, not much above a year ago; That the day before one of his children was to be Baptised, he spent the time in giving up himself and his child unto the Lord, and in taking hold of the Covenant for both of them, and in praying that he might on the morrow, be able in much faith and love and Covenant obedience, to do it, at the Baptism of the Lord. Oh, which he writes it is not easy, though common, to offer a child unto God in Baptism.

Sirs, when you have done this for your Children, you have a singular advantage to plead for the fulfillment of that word upon them in Is[aiah]. 44:3 I will pour my Spirit upon thy Soul, and my blessing upon thy offspring. You may go before the Lord, and plead, Lord, Was not the Baptismal water poured by thy command upon my children! Oh, do thou now pour upon them the heavenly grace, which that Baptismal water signified.

And now, no sooner let those Children become able to understand it, than you shall make them understand what the design of their Baptism was. Parents, I am to tell you, that if you let your Children grow up, without ever telling them, that, and, why, they were Baptised into the Name of the Lord, you are fearfully guilty of taking the name of the Lord in vain.

It was the manner of an excellent minister, upon the Baptising of a child, solemnly to deliver the child into the hands of the Parents, with such words as those, here, take this child now, and bring it up for the Lord Jesus Christ, I charge you.

God from Heaven speaks the like words to you, O Parents, upon all your Baptised Children. And that you may bring up your Children for the Lord Jesus Christ, you must as soon as you can, let them know, that in Baptism, they were dedicated unto Him.

Show them that when they were Baptised, they were listed among the servants and soldiers of the Lord Jesus Christ, and that if they live in rebellion

against Him, Woe unto them!

Show them, from Matthew 28:19, 20. That since they are Baptised into the Name of the Father, and the Son, and the Holy Spirit, they must observe all things, whatsoever the Lord Jesus Christ, has commanded them.

Show them from Romans 6:4, that since they are Baptised, they are Buried with Christ in baptism, and must live no longer in sin, but be Dead unto all the Vanities of the World.

Show them from Galatians 3:27, that since they are Baptised, they have put on Christ, and must follow His Example, and be as He was in the World.

Show them from I Peter 3:21, that being Baptised, they must now make the Answer of a good conscience, to all the proposals of the New-Covenant: and God propounding to them, shall my Christ be thine, and wilt thou be His? They must conscientiously answer, Lord, with all my heart!

Put this very solemnly unto your children; My child, shall God the Father, be thy Father? Shall God the Son, be thy Saviour! Shall God the Spirit, be thy Sanctifier; and are thou willing to be the servant of that one God, who is, Father, Son, and Spirit?

Leave them not, until their little hearts are conquered unto that for which they have been Baptised. It has been the judgment of some Judicious men; that If infant baptism were more improved, it would be less disputed. Oh, that it were thus Improved.

III. Instruct your children in the great matters of Salvation; Oh, Parents, do not let them die without instruction.

There is indeed, an Instruction in Civil Matters which we owe unto our Children. It is very pleasing to our Lord Jesus Christ, that our Children be well formed with, and well informed in the rules of Civility, and not be left a Clownish, and Sottish, and Ill Bred sort of Creatures. An Unmannerly Brood is a Dishonour to Religion.

And, there are many points of a Good Education that we should bestow upon our Children; they should Read, and Write, and Cyphar, and be put unto some Agreeable Callings; and not only our Sons, but our Daughters also should be taught such things, as will afterwards make them useful in their places. There is a little Foundation of Religion laid in such an Education. But besides, and beyond all this, there is an Instruction in Divine Matters, which our Children are to be made partakers of.

Parents, Instruct your Children, in the Articles of Religion; and acquaint them with God, and Christ, and the Mysteries of the Gospel, and the Doctrines and Methods of the Great Salvation.

It was Required, in Psalm 78:5 He commanded our Fathers, to make known to their Children, that the Generation to come might know, who should arise and declare them to their children, that they might set their Hope in God, and keep His commandments.

It was required in Eph[esians]. 6:4 Fathers, bring up your children in the Nurture and Admonitions of the Lord. Would you have your Children to be Wise and Good? I know not why you should expect it, unless you take abundance of pains, by your Instruction to make them so.

There was a Wise and Good son, who gave that account how he became what he was; in Prov[erbs] 4:3, 4. I was my Fathers son, and he taught me. O Begin betimes, to Tell your Children who is their Maker, and who is their Saviour, and what they are Themselves, and what is like to become of them; and by no means let them want that Advantage in 2 Tim[othy] 3:15 From a child thou hast known the Holy Scriptures, which are able to make thee wise unto Salvation.

Cause them to look often into their Bibles, and here and there Single out some special Sentences from those Oracles of Heaven for them to get into their Memories. And for the better management of their Instruction there are especially two Handles, to be laid hold upon; the one is, a Proper Catachism, the other is the Public Ministry.

Be sure that they learn their Catachism very perfectly; but then content not yourselves with hearing them say by Rote the Answers in their Catachism; Question them very distinctly over again about every clause in the Answer and bring all to it so plain before them, that by their saying only, Yes, or No, you may perceive that the sense of the Truth is entered into their souls.

And then, what they hear in the Evangelical Ministry, do you Apply it unto them after their coming Home; Confer with them familiarly about the Things that have been handled in the [proper and true] Ministry of the Word: go over one Thing after another, with them, till you see they have got clear Ideas of it; Then put it unto them, Are not you now to Avoid such a thing; or perform such a thing! And must not you now make such and such a prayer unto God? Bid them then, go do accordingly.

Hence also, 'twere very desireable, that you should watch all opportunities, to be instilling your Instructions into the souls of your little Folks. They are narrow-mouthed Vessels, and things must be drop after drop instilled into them. It was required in Deut[eronomy]. 6:6, 7 The words which I command thee, Thou shalt teach them Diligently unto thy Children, and shalt Talk of them, when thou sittest in thine House, and when thou walkest by the way, and when thou sittest down and when thou riseth up.

How often in a week, are we Diverting ourselves, with our Children in our Houses? There thy stand before us; There is nothing to hinder our saying some very profitable thing for them to think upon; well, can you let fall Nothing upon them, that it will be worth their while, for them to think upon?

What, Nothing of God, and Christ, and of another World, and of their own Souls, and of the Sins that may Endanger them, and of the Ways which they may take to be Happy? Doubtless, you may say something.

And who can tell? It may be after you are gone to behold the Face of the Lord Jesus Christ in Glory, these your Children will Remember Hundreds of profitable Instructions, that you have given them; and Live upon them when you that gave them, are Dead.

With Two Strokes I will clench this advice. The one is that in Proverbs 22:6 Train up a Child in the way he should go, and when he is old, he will not Depart from it. The other is that in Prov 17:25. A Foolish Son is a grief to his Father, and a bitterness to her that bare him.

IV. Parents, with a Sweet Authority over your Children, Rebuke them for, and Refrain them from, everything that may prove prejudicial unto their Salvation.

Sirs, You can do little for the Welfare of your Children, if once you have lost your Authority over them. Would you bring your Children to the Fear of God? Your character then must be that in 1 Tim[othy] 3:4 One that ruleth well his own House, having his Children in subjection, with all gravity.

Don't by your Lightness and Weakness and Folly, suffer them to Trample upon you; but keep up so much Authority, that your Word may be a Law unto them. Nevertheless,

Let not your Authority be strained with such Harshness and Fierceness, as may discourage your Children. To treat our Children like Slaves, and with such Rigour, that they shall always Tremble and Abhor to come into our presence, This will be very unlike to our Heavenly Father.

Our Authority should be so Tempered with Kindness, and Meekness, and Loving Tenderness, that our Children may Fear us with Delight, and see that we Love them, with as much Delight.

Now, Let our Authority, effectually keep in our Children, from all their unruly Exorbitancies and Extravagancies. If we let our Young Folks grow Head-Strong, and if we grow Afraid of compelling them to the Wholesome Orders of our Families, we have even given them up to Ruin. God brought that Son to an Untimely and a Terrible End, of whom its reported in I Kings 1:6 His Father had not Displeased him at any time, in saying, Why hast thou done so?

I beseech you, Parents, Interpose your Authority to stop and check the Carrier of your Children, when they will be running into the paths of the Destroyer.

Gratify them with Rewards of Well doing, when they Do well; but let them not be gratified with every Ungodly Vanity, that their Vain Minds may be set upon.

Wherefore keep a strict Inspection upon their Conversations; Examine, How they spend their Time; Examine, What Company they keep? Examine, Whether they take no Bad Courses.

Be not such Foolish Enemies to yourselves, and your Children as to count them your Enemies, that shall friendly advise you of their Miscarriages. That wretched Folly, is a very Frequent One!

When you Find out their Miscarriages, effectually Rebuke them, and Restrain them. Incurr not the Indignation of Heaven, once Incurred by a Fond Father, in 1 Sam[uel] 3:13; I will Judge his House forever, for the Iniquity which he knoweth; because his Sons made themselves vile, and he Restrained them not.

Ah, Thou Indulgent Parent; if you canst not Cross thy Children, when they are disposed unto that which is for the Dishonour of God, God will make thy Children to become Crosses unto thee.

Sirs, When your Children do amiss, call them Aside; set before them the Precepts of God which they have broken, and the Threatenings of God, which they provoked. Demand of them, to profess their sorrow for their fault, and Resolve that they will be no more so Faulty.

Yes, there may be occasion for you, to consider that Word of God in Proverbs 13:24 He that spareth his Rod, hateth his son, but he that loveth him, chasteneth him betimes; and that Word in Proverbs 19:18 Chasten thy son while there is Hope, and let not thy soul spare for his Crying; and that word, in Proverbs 23:13, 14. Withhold not Correction from the Child; for if thou beatest him with the Rod, he shall not Die; Thou shalt beat him with the Rod, and shalt deliver his Soul from Hell.

But if it must be so, Remember this Counsel; Never give a Blow in a passion. Stay till your passion is over; and let the Offenders plainly see, that you deal thus with them, out of a pure Obedience unto God, and for their true Repentance.

One of the ancients, has this Ingenious gloss In the tabernacle, Aarons Rod, and the Pot of Manna, were together; so (says he) when the Rod is used, the sweetness and goodness of the Manna must accompany it: and Mercy be joined with Severity. Let me leave that premonition with you, in Proverbs 29:15 A child left unto himself, bringeth his Mother to shame.

V. Lay your Charges upon your Children; Parents, Charge them to Work about their own Salvation.

The Charges of Parents have a great Efficacy upon many Children; To Charge them vehemently, is to Charm them wonderfully.

Command your Children, and it may be they will Obey. Let Gods commands be your commands, and it may be your Children will obey them.

Lay upon your Children, the Charges of God, as David once upon his, in 1 Chron[icles] 28:9 My Son, know thou the God of thy Father, and serve Him with a perfect heart, and with a willing mind; if thou seek Him, He will be found of thee, but if thou forsake Him, He will cast thee off forever.

Now, Sirs, You will do well, to single out some singular Charges of God, and calling your Children one by one before you, Lay those Charges upon them, in the Name of the God that made them, and obtain from them, if you can, a promise that they will observe those Charges, with the Help of that God. I will set before you, three or four of those Charges.

Let one of your Charges upon your Children, be that in 1 John 3:23 This is His commandment, that we should believe on the Name of His Son Jesus Christ.

Charge them to carry their poor, guilty, ignorant and polluted and Enslaved souls unto the Lord Jesus Christ, that He may Save them from their Sins, and Save them from the Wrath to come.

Charge them, to mind how the Lord Jesus Christ Executes the Office of a Prophet, and a Priest, and a King, and Cry to Him, that He would Save them in the Execution of all those Blessed Offices.

Let another of your Charges be that in Hag[gai] 1:5, 7 Thus saith the Lord of Hosts, Consider Your Ways. Charge them to set apart a few minutes now and then, for Consideration; and in those minutes,

Charge them to Consider, what they have been doing, and what they should have been doing, ever since they came into the World, and if they should immediately go out of the World, what will become of them throughout Eternal Ages.

I have read of a Dying Parent, who laid this Charge upon his wild Son, That he would allow one quarter of an Hour every Day to Consider on something or other, any Thing, as his Fancy led him. The Young men having for some while done so, at last began to consider, why his Dying Parent should lay such a Charge upon him. This brought on so many Devout Thoughts, that before long, in the Conversion of the Young man, the Desire of the Dying Parent was accomplished.

Oh! If you could Engage your Children to Think Upon Their Ways, there would be Hopes of their Turning to God.

But, Let a Third of your Charges, be that in Matthew 6:6 Enter into thy closet, and when thou hast shut thy door, pray to thy Father that sees in secret.

Charge them to retire for Secret Prayer, every Day that comes over their Heads, Talk with them, till you see, that they can tell, what they should Pray for: and then, often Charge them to Pray every day; yea, sometimes Ask them, Do you Remember the charge I Laid upon you?

Ah, Parent, thy children will do well, while it can be said, Behold, They Pray. And thy House filled with thy Childrens Prayers, would be better accommodated, than if it were filled, with all the Riches of the Indies.

Let a Fourth of your Charges be That, in Proverbs 9:6, Forsake the Foolish and Live.

Charge them to avoid the snares of Evil Company; Terrify them with Warnings of those Deadly Snares.

Often Repeat this Charge unto them, That if there be any Vicious Company, they shun them, as they would the Plague or the Devil.

Often say, "My son, if Sinners entice thee, consent thou not."

Often say, "My child, walk with the Wise, and thou shalt be wise, but a Companion of Fools shall be destroyed."

Oh, Do Not let the Beasts of prey, carry away thy Children alive.

Shall I add; it is here intimated, That an Abraham, is to Command his Children, very particularly, about, The Way of the Lord. The Way of the Lord, is the Way of his Right, Pure, Instituted Worship. Well, then, Command your Children, that they do not Forsake the Holy Institutions of the Lord Jesus Christ, and Embrace a Vain Worship, consisting of things that He never Instituted.

There are some clauses in the Second Commandment, which intimate, That if Parents would see the Mercies of God upon their Children, they must Charge them, to Worship God, only in those Ways of Worship that God hath appointed.

Thus keep Charging of your Children, while you Live. And if you are capable so to Do, Do it once more with all possible Solemnity, when you come to Die. The words of a Dying Parent, will probably be Living Words, and Lively Ones.

When our Excellent Mitchel was a Dying, he let fall such a Speech as This, unto a Young Gentleman, that Lodged in his House, My Friend, as a Dying man, I now charge you, that you don't meet me out of Christ in the Day of Christ. This one Speech, brought into Christ, the soul of that Young Gentleman! Truly, if your Dying Lips, may utter such Dying Words unto your Children, who can tell, but they may then be brought into Christ, if they were never so before!

But, lest you should have no opportunity to Speak in a Dying Hour, why should you not Write such things, as you would have them to Think upon, when you shall be Dead and Gone? An unknown deal of Good, may your Children reap, from the Admonitions, that a Dying Parent may Leave unto them.

VI. Parents, be Exemplary:

Your Example may do much towards the Salvation of your Children, your Works will more Work upon your Children, than your Words; your Patterns will do more than your Precepts; your Copies than your Counsels.

What was then said unto Pastors, may very fitly be said unto Parents, in Titus 2:2, In all Things show thyself a pattern of good works; and in Timothy 4:12 Be thou an Example in Word, in Conversation, in Charity, in Spirit, in Faith, in Purity.

It will be impossible for you to infuse any Good into your Children, if you appear void of that Good yourselves. If the Old Crab go backward, it is to no purpose, for the Young One to be directed to go forward: Sirs, Young Ones, will Crawl after the Old Ones.

Would you have your Children, well principled with the Fear and Faith of God? Mind that passage, in Acts 10:2, Cornelius was a devout man, and one that Feared God, with all his House.

Mind that passage in Acts 18:8 Crispus Believed on the Lord, with all his House. It seems, the whole House, is like to do, as the Parents do. It is as Austin [Augustine] expresses it, the usual cry, Nolumus esse meliores quam patres, We will be no Better than our Parents, If the Parents will make their Cakes to the Queen of Heaven, the Children will kindle their Fires for them.

Justin Martyr somewhere Inquires why the Prophet Elisha imprecated the Revenges of Heaven upon the Children that mocked him, when they hardly understood what they did? and he answers, The Children Learned their wicked Language from their Parents, and now God punished both of them together.

Parents, let your Children see nothing by you, but what shall be commendable and imitable. Be able to say unto your Children, My child, follow me, as you have seen me follow Christ.

Let them from your Seriousness, and your Prayerfulness, and your Watchfulness, and your Sanctification of the Lord's Day, be taught, how they should walk and please God. You "Bid" them well; "Show" them How!

VII. Prayer, Prayer, must be the Crown of all:

Parents, is it your Hearts Desire? Let it be also your Prayer, for your Children, that they may be Saved.

Prayer for the Salvation of any Sinners, availith much. How much may it avail for the Salvation of our Sinful Children? Much availed that Prayer of David in 1 Chron[icles]. 29:19, Lord, Give unto my Son a perfect Heart, to keep thy Commandments.

Parents, Make such a prayer for your Children, Lord, Give unto my Child, a New Heart, and a Clean Heart, and a Soft Heart; and an Heart after thy own Heart.

We have been told, that Children once were brought unto our Lord Jesus Christ, for Him to Put His hands upon them; and He Put His hands upon them, and blessed them. Oh! Thrice, and Four Times Blessed Children! Well, Parent, Bring your Children unto the Lord Jesus Christ; it may be, He will put His Blessing, and Healing, and Saving Hands upon them: Then, they are Blessed, and shall be Blessed for evermore! If Abraham cry to God, O that my son Ishmael may live in thy sight! God will say to Abraham, concerning Ishmael, I have heard thee!

Pray for the Salvation of thy Children, and carry the Names of every one of them, every day before the Lord, with Prayers, the Cries whereof shall pierce the very Heavens. Holy Job did so! Job 1:5 He offered according to the number of all his Children; Thus did Job continually.

Address Heaven with daily Prayers, That God would make thy Children the Temples of His Spirit, the Vessels of His Glory; and the Care of His Holy Angels.

Address the Lord Jesus Christ, with Prayers, like them of old, That all the Maladies upon the Souls of thy Children may be cured and that the Evil One may have no possession of them.

Yea, when thou do cast thine Eyes upon the Little Folks, often in a day dart up an Ejaculatory Prayer to Heaven for them; Lord, let this child be thy servant for ever.

If your Prayers are not presently answered, be not Disheartened: Remember the Word of the Lord, in Luke 18:1, That men ought always to pray, and not to faint.

Redouble your Importunity, until thou speed for thy child, as the poor Woman of Canaan did.

Join Fasting to thy Prayer; it may be, the evil in the soul of your child, will not go out, without such a Remedy. David sets himself to Fasting, as well as Prayer, for the Life of his Child. Oh, Do as much for the Soul of thy Child!

Wrestle with the Lord. Receive no Denial. Earnestly protest, Lord, I will not let thee go, except thou Bless this poor Child of mine, and make it thy own! Do this, until, if it may be, thy Heart is Raised by a Touch of Heaven, to a particular Faith; that God has blessed this child, and it shall be Blessed and Saved Forever.

But is this all that is to be done? There is more. Parents, Pray with your Children, as well as for them.

Family prayer must be maintained by all those Parents, that would not have their Children miss of Salvation, and that would not have the Damnation of their Children horribly fall upon themselves. Man, thy Family is a Pagan Family, if it be a Prayerless Family: And the Children going down to the place of Dragons from this thy Family, will pour out their Execrations upon thee, in the Bottom of Hell, until the very Heavens be no more.

But, besides your Family Prayers, Oh, parents, why should you not now and then, take one capable Child after another, alone before the Lord? Carry the Child with you, into your Secret Chambers; make the Child kneel down by you, while you present it unto the Lord, and Implore His Blessing upon it.

Let the Child, hear the Groans, and See the Tears, and be a witness of the Agonies, wherewith you are Travailing for the Salvation of it. The Children will never Forget what you do; it will have a marvelous Force upon them.

Thus, Oh, Parents, You have been told, what you have to do, for the Salvation of your Children; and certainly, their Salvation is worth all of this!

Your Zeal about the Salvation of your Children, will be a symptom of your own Sincerity. A total want of Zeal, will be a Spot upon you, that is not a Spot of the Children of God.

God will Reward the Zeal. It is very probable, That the Children thus cared for, will be the Saved of the Lord. Your Glad Hearts will one day see it, if they are so: it will augment your Heaven, through all eternity, to have These in Heaven with you.

And let it be Remembered, That the Fathers, are not the only Parents obliged thus to pursue the Salvation of their Children: You that are Mothers, have not a little to do for the Souls of your Children, and you have Opportunity to do more than a Little.

Bathsheba the Mother of Solomon, and Eunice the Mother of Timothy, did greatly contribute unto the Salvation of their famous and worthy Sons.

God has Commanded Children, Forsake not the Law of thy Mother. Then, a Mother must give the Law of God unto them.

It is said of the Virtuous Woman, She looks well to the ways of her Household; Then a Virtuous Mother looks well to the Ways of her Children.

Your Children may say, In sin did my Mother Conceive me. Oh, Then let Mothers do what they can, to Save their Children out of Sin!

And especially, Mothers, do you Travail for your Children over again, with your Earnest Prayers for their Salvation, until it may be said unto you, as it was unto Monica the Mother of Austin, concerning him: "Tis impossible, that thy Child should perish, after thou hast Employed so many Prayers and Tears for the Salvation of it."

Now God give a Good Success to these Poor Endeavours!

Source: Cotton Mather, A family well-ordered, or, An essay to render parents and children happy in one another handling two very important cases: I. What are the duties to be done by pious parents, for the promoting of piety in their children, II. What are the duties that must be paid by children that they may obtain the blessings of the dutiful. (Boston: Printed by B. Green & J. Allen, 1699).

Founding of New Sweden (1700s)

The eighteenth-century Swedish Lutheran minister Israel Acrelius gives an account of the earlier settlement of New Sweden, an area that today encompasses Delaware and parts of New Jersey and Pennsylvania.

In 1633, the King of Sweden granted a charter for the establishment of the New Sweden Company, which initially had Dutch and Swedish backing. Peter Minuit (also spelled Minuet), the former director of New Netherland, headed the Swedish settlement, but conflicts arose with neighboring Dutch settlements. In 1655, Peter Stuyvesant, who had replaced Minuit as director of New Netherland, claimed New Sweden. This diversion of resources, however, weakened New Netherland's defenses. In 1664, the British conquered New Netherland, which included lands extending to the Delaware River.

After that the magnanimous Genoese, Christopher Columbus, had, at the expense of Ferdinand, King of Spain, in the year 1492, discovered the western hemisphere, and the illustrious Florentine, Americus Vesputius, sent out by King Emanuel of Portugal, in the year 1502, to make a further exploration of its coasts, had had the good fortune to give the country his name, the European powers have, from time to time, sought to promote their several interests there. Our Swedes and Goths were the less backward in such expeditions, as they had always been the first therein. They had already, in the year 996 after the birth of Christ, visited America, had named it Vinland the Good, and also Skrællinga Land, and had called its inhabitants "the Skrællings of Vinland." It is therefore evident that the Northmen had visited some part of North America before the Spaniards and Portuguese went to South America. But the question is, What would have been thought about Vinland if no later discoveries had been made, and what they thought about it before the time of Columbus?

Every region in America was discovered in its own separate time. Virginia was discovered in the year 1497 by Sebastian Cabot, a Portuguese, who was then the captain of an English ship. Its coasts were afterwards visited by those brave knights, Sir Francis Drake and Sir Walter Raleigh, the latter of whom called the land VIRGINIA, after Queen Elizabeth of England, who lived unmarried. Under this name was included all the country stretching from Cape Florida to the St. Lawrence River, which was formerly called Florida, when separate names were not yet given to its coasts. That was done about the year 1584. Captain De la Ware, under the hand of the English Admiral James Chartiers, was the first who discovered the bay in which the Indian river Poutaxat debouched, and gave his name, Delaware, to both the river and the bay, in the year 1600. These countries were repeatedly visited by the English: first by those sent out by Sir Walter Raleigh from Bristol, in the year 1603, and afterwards by Sir G. Popham and Captain James Davis, but little more was accomplished than that they learned to know the people, erected me small places and forts, which, however, were soon destroyed by the savages. In the year 1606 body of emigrants was sent to the northern regions, by two companies, called the London and the Bristol Companies. The former settled southward on the Chesapeake Bay; the latter, on the Kennebeck, or Sagadahoc River. Each had its territorial rights secured by a patent. In the year 1620, a dispute arose between them about the fisheries at Cape Cod, when a new patent was given. The Bristol Company, which received an accession of some persons of rank and distinction, changed its name to that of the Plymouth Council, and obtained a right to all the lands lying above the 40th degree up to the 48th degree of north latitude, which was three degrees farther north than the former grant, and included the greater part of Acadia, or New Scotland, and also extended westward from the Atlantic to the Pacific Ocean: all this was included in New England. The rest remained under Virginia.

About the same time the Hollanders undertook to steal into these American harbors. They took a fancy to the shores of the bay called by the Indians Menahados, and the river Mohaan Henry Hudson, an Englishman in the service of the Holland East India Company, had first discovered those places, and called the bay after his own name, Hudson's Bay. 'P his East India Company, in the year 1608, sold its right to the country, which it based upon its priority of discovery, to some Hollanders. These obtained from the States-General of Holland an exclusive privilege (*privilegium exclusivum*) to the country, and took the name of "The West India Company of Amsterdam." In the year 1610 they began to traffic with the Indians, and in the year 1613 built a trading post (*magazin*) at the plat now called Albany, and in the following year placed some cannon there. Samuel Argall, the Governor of Virginia, drove them out in 1618; but King James I. gave them permission to remain, that their ships might obtain water there in their voyages to Brazil. From that time until 1623, when the West India Company obtained its charter, their trade with the Indians was conducted almost entirely on shipboard, and they made no attempts to build any house or fortress until 1629. Now, whether that was done with or without the permission of England, the town of New Amsterdam was built and fortified, as also the place Aurania, Orange, now called Albany, having since had three general-governors, one after the other. But that was not yet enough. They wished to extend their power to the river Delaware also, and erected on its shores two or three small forts, which were, however, soon after destroyed by the natives of the country.

It now came in order for Sweden also to take part in this enterprise. William Usselinx, a Hollander, born at Antwerp in Brabant, presented himself to King Gustaf Adolph, and laid before him a proposition for a Trading Company, to be established in Sweden, and to extend its operations to Asia, Africa, and

Magellan's Land (Terra Magellanica), with the assurance that this would be a great source of revenue to the kingdom. Full power was given him to carry out this important project; and thereupon a contract of trade was drawn up, to which the Company was to agree and subscribe it. Usselinx published explanations of this contract, wherein he also particularly directed attention to the country on the Delaware, its fertility, convenience, and all its imaginable resources. To strengthen the matter, a charter (octroy) was secured to the Company, and especially to Usselinx, who was to receive a royalty of one thousandth upon all articles bought or sold by the Company.

The powerful king, whose zeal for the honor of God was not less ardent than for the welfare of his subjects, availed himself of this opportunity to extend the doctrines of Christ among the heathen, as well as to establish his own power in other parts of the world. To this end, he sent forth Letters Patent, dated at Stockholm on the 2d of July, 1626, wherein all, both high and low, were invited to contribute something to the Company, according to their means. The work was completed in the Diet of the following year, 1627, when the estates of the realm gave their assent, and confirmed the measure. Those who took part in this Company were: His Majesty's mother, the Queen Dowager Christina, the Prince John Casimir, the Royal Council, the most distinguished of the nobility, the highest officers of the army, the bishops and other clergymen, together with the burgomasters and aldermen of the cities, as well as a large number of the people generally. The time fixed for paying in the subscriptions was the 1st of May of the following year (1628). For the management and working of the plan there were appointed an admiral, vice-admiral, chipman, under-chipman, assistants, and commissaries; also a body of soldiers duly officered.

But when these arrangements were now in full progress, and duly provided for, the German war and the king's death occurred, which caused this important work to be laid aside. The Trading Company was dissolved, its subscriptions nullified, and the whole project seemed about to die with the king. But, just as it appeared to be at its end, it received new life. Another Hollander, by the name of PETFR MENEWE, sometimes called MENUET made his appearance in Sweden. He had been in the service of Holland in America, where he became involved in difficulties with the officers of their Rest India Company, in consequence of which he was recalled home and dismissed from their service. But he was not discouraged by this, and went over to Sweden, where he renewed the representations which Usselinx had formerly made in regard to the excellence of the country and the advantages that Sweden might derive from it.

Queen Christina, who succeeded her royal father in the government, was glad to have the project thus renewed. The royal chancellor, Count Axel Oxenstierna, understood well how to put it in operation. He took the West India Trading Company into his own hands, as its president, and encouraged other noblemen to take shares in it. King Charles I of England had already, in the year 1631, upon representations made to him by John Oxenstierna, at that time Swedish ambassador in London, renounced, in favor of the Swedes, all claims and pretensions of the English to that country, growing out of their rights as its first discoverers. Hence everything seemed to be settled upon a firm foundation, and all earnestness was employed in the prosecution of the plans for a colony.

As a good beginning, the first colony was sent off; and Peter Menewe was placed over it, as being best acquainted in those regions. They set sail from Göteborg, in a ship-of-war called the *Key of Colmar*, followed by a smaller vessel bearing the name of the *Bird Griffin*, both laden with people, provisions, ammunition, and merchandise, suitable for traffic and gifts to the Indians. The ships successfully reached their place of destination. The high expectations which our emigrants had of that new land were well met by the first views which they had of it. They made their first landing on the bay or entrance to the river Poutaxat, which they called the river of New Sweden; and the place where they landed they called *Paradise Point*.

A purchase of land was immediately made from the Indians; and it was determined that all the land on the western side of the river, from the point called Cape Inlopen or Hinlopen, up to the fall called Santickan, and all the country inland, as much as was ceded, should belong to the Swedish crown forever. Posts were driven into the ground as landmarks, which were still seen in their places sixty years afterwards. A deed was drawn up for the land thus purchased. This was written in Dutch, because no Swede was yet able to interpret the language of the heathen. The Indians subscribed their hands and marks. The writing was sent home to Sweden to be preserved in the royal archives. Mans Kling was the surveyor. He laid out the land and made a map of the whole river, with its tributaries, islands, and points, which is still to be found in the royal archives in Sweden. Their clergyman was Reorus Torkillus of East Gothland.

The first abode of the newly arrived emigrants was at a place called by the Indians Hopokahacking. There, in the year 1638, Peter Menuet built a fortress which he named Fort Christina, after the reigning queen of Sweden. The place, situated upon the west side of the river, was probably chosen so as to be out of the way of the Hollanders, who claimed the eastern side, a measure of prudence, until the arrival of a greater force from Sweden. The fort was built upon an eligible site, not far from the mouth of the creek, so as to secure them in the navigable water of the Maniquas, which was afterwards called Christina Kihl, or creek.

The country was wild and uninhabited by the Hollanders. They had had two or three forts on the river-Fort Nassau, where Gloucester now stands, and another at Horekihl, down on the bay. But both of these were entirely destroyed by the Americans, and their occupants driven away. The following extract from the History of the New Netherlands, which Adrian van der Donck published in the year 1655, with the license and privilege as well of the States-General as of the Nest India Company, will serve as proof of what we have said.

"The place is called Hore-kihl, but why so called we know not. But this is certain: that some years back, before the English and the Swedes came hither, it was taken up and settled as a colony by Hollanders, the arms of the States being at the same time set up in brass. These arms having been pulled down by the villany of the Indians, the commissary there resident demanded that the head of the traitor should be delivered to him. The Indians, unable to escape in any other way, brought him the head, which was accepted as a sufficient atonement of their offence. But some time afterwards, when we were at work in the fields, and unsuspecting of danger, the Indians came as friends, surrounded the Hollanders with overwhelming numbers, fell upon them, and completely exterminated them. Thus was the colony destroyed, though sealed with blood, and dearly enough purchased."

Notwithstanding all this, the Hollanders believed that they had the best right to the Delaware River; yea, a better right than the Indians themselves. It was their object to secure at least all the land lying between said river and their city of New Amsterdam, where was their stronghold, and which country they once called "The New Netherlands." But, as their forces were still too weak, they always kept one or another of their people upon the east side of the river to watch those who might visit the country. As soon, therefore, as Menuet landed with his Swedish company, notice of the fact was given to the Director-General of the Hollanders in New Amsterdam. He waited for some time, until he could ascertain Menuet's purpose; but, when it appeared that he was erecting a fortress for the Swedes, he sent him the following protest:

Thursday, May 6, 1638.

"I, William Kieft, Director-General of the New Netherlands, residing upon the island of Manhattan, in the Fort Amsterdam, under the government belonging to the High and Mighty States-General of the United Netherlands, and the West India Company, chartered by the Council Chamber in Amsterdam, make known to you, Peter Menuet, who style yourself Commander in the service of Her Royal Majesty, the Queen of Sweden, that the whole South River of the New Netherlands, both above and below, hath already, for many years, been our property, occupied by our forts, and sealed with our blood, which was also done when you were in service in the New Netherlands, and you are, therefore, well aware of this. But whereas you have now come among our forts to build a fortress to our injury and damage, which we shall never permit; as we are also assured that Her Royal Majesty of Sweden has never given you authority to build forts upon our rivers and coasts, nor to settle people on the land, nor to traffic in peltries, or to undertake anything to our injury: We do, therefore, protest against all the disorder and injury, and all the evil consequences of bloodshed, uproar, and wrong which our 'Trading Company may thus suffer: And that we shall protect our rights in such manner as we may find most advisable." Then follows the usual conclusion.

In his History of the New Netherlands, already cited, Adrian van der Donck likewise relates how protest was made against the building of Fort Christina; but there, also, he gives evidence of the weakness of the Hollanders in the river, on the first arrival of the Swedes, and that their strength consisted almost entirely in great words.

"On the river," he says, "lies, first, Maniqua's Kihl, where the Swedes have built Fort Christina, where the largest ships can load and unload at the shore. There is another place on the river called Schulkihl, which is also navigable. That, also, was formerly under the control of the Hollanders, but is now mostly under the government of the Swedes. In that river (Delaware) there are various islands and other places, formerly belonging to the Hollanders, whose name they still bear, which sufficiently shows that the river belongs to the Hollanders, and not to the Swedes. Their very commencement will convict them. Before the year 1638, one Minnewits, who had formerly acted as director for the Trading Company at Manhatans, came into the river in the ship *Key of Colmar*, and the yacht called the *Bird Griffin*. He gave out to the Hollander, Mr. van der Nederhorst, the agent of the West India Company in the South River, that he was on a voyage to the West India Islands, and that he was staying there to take in wood and water. Whereupon said Hollander allowed him to go free. But, some time after, some of our people going thither found him still there, and he had planted a garden, and the plants were growing in it. In astonishment eve asked the reasons for such procedure, and if he intended to stay there. To which he answered evasively, alleging various excuses for his conduct. The third time they found them settled and building a fort. Then we saw their purpose. As soon as he was informed of it, Director Kieft protested against it, but in vain."

Thus Peter Menuet made a good beginning for the settlement of the Swedish colony in America. He guarded his little fort for over three years, and the Hollanders neither attempted nor were able to overthrow it. After some years of faithful service he died at Christina. In his place followed Peter Hollendare, a native Swede, who did not remain at the head of its affairs more than a year and a half. He returned home to Sweden, and was a major at Skepsholm, in Stockholm, in the year 1655.

The second emigration took place under Lieutenant Colonel JOHN PRINTZ, who went out with the appointment of Governor of New Sweden. He had a grant of four hundred six dollars for his travelling expenses, and one thousand two hundred dollars silver as his annual salary. The Company was invested with the exclusive privilege of importing tobacco into Sweden, although that article was even then regarded as unnecessary and injurious, although indispensable since the establishment of the bad habit of its use. Upon the same occasion was also sent out Magister John Campanius Holm, who was called by their excellencies the Royal Council and Admiral Claes Flemming, to become the government chaplain, and watch over the Swedish congregation.

The ship on which they sailed was called the "Fama." It went from Stockholm to Göteborg, and there took in its freight. Along with this went two other ships of the line, the *Swan* and the *Charitas*, laden with people, and other necessities. Under Governor Printz, ships came to the colony in three distinct voyages. The first ship was the *Black Cat*, with ammunition, and merchandise for the Indians. Next, the ship *Swan*, on a second voyage, with emigrants, in the year 1647. Afterwards, two other ships, called the *Key* and *The Lamp*. During these times the clergymen, Mr. Lawrence Charles Lockenius and Mr. Israel Holgh, were sent out to the colony. The instructions for the governor were as follows:—

Instructions, according to which Her Royal Majesty, our Most Gracious Queen, will have the Lieutenant Colonel, now also the appointed governor over New Sweden, the noble and well-born JOHN PRINTZ, to regulate himself as well during his voyage as upon his arrival in that country. Given at Stockholm, the 15th of August, 1642.

1. ... Inasmuch as some of the subjects of Her Royal Majesty and of the crown of Sweden have, for some time past, undertaken to sail to the coasts of the Rest Indies, and have already succeeded in conquering and purchasing a considerable tract of land, and in promoting commerce, with the especial object of extending the jurisdiction and greatness of Her Royal Majesty and of the Swedish crown, and have called the country NEW SWEDEN; wherefore and inasmuch as Her Royal Majesty approves and finds this their undertaking and voyaging not only laudable in itself, but reasonable, and likely, in the course of time, to benefit and strengthen Her Royal Majesty and the Swedish throne: so has Her Royal Majesty, for the promotion of that work and for the assistance of those who participate therein, furnished them for the making of that important voyage, and also for the confirming and strengthening of that important work thus begun in New Sweden, for said voyage, two ships, named the *Fama* and the *Swan*, as well as some other means necessary thereto, under a certain Governor, whom Her Majesty has provided with sufficient and necessary powers, having thereunto appointed and legitimated Lieutenant Colonel John Printz, whom she has, accordingly, seen good to instruct upon the points following.
2. The ships above named having proceeded to Göteborg, John Printz, the Governor of New Sweden, shall now, without any delay, take his departure to said place, so arranging his journey by land that he may reach there by the first opportunity. Going down to Göteborg, he shall assist in ordering and arranging everything in the best manner possible, and especially in accordance with the best regulations that the members of the company can have made; and as concerns his own person, and that of his attendants, he shall so arrange his affairs that he may immediately, in the month of September next following, set sail from this country and proceed to sea.

3. But either before, or at the time when the ships are about to set sail from Götheborg, the Governor shall consult with the skippers and officers of the ships, considering and deciding, according to the state of the wind and other circumstances, whether he shall direct his course to the north of Scotland, or through the channel between France and England.
4. Under Way, and on the journey, he must see to it that the officers and people of the ships perform their duties at sea truly and faithfully; and in all important and serious matters he can always avail himself of the aid and counsel of the persons aforesaid, who usually form the council of a ship; he shall also have every important occurrence carefully noted, causing a correct log or journal thereof to be kept, of which, also, he shall, by every opportunity, send hither a correct copy.
5. The Governor, God willing, having arrived in New Sweden, he must, for his better information, bear in mind that the boundaries of the country of which our subjects have taken possession extend, in virtue of the articles of the contract entered into with the wild inhabitants of the country, as its rightful lords, from the seacoast at Cape Hinlopen, upwards along the west side of Godin's Bay, and so up the Great South River, onwards to Minque's Pil, where Fort Christina is built, and thence still farther along the South River, and up to a place which the wild inhabitants call Sankikans, where the farthest boundaries of New Sweden are to be found. This tract or district of country extends in length about thirty (30) German miles; but in breadth, and into the interior, it is, in and by tile contract, conditioned that Her Royal Majesty's subjects, and the participants in this Company of navigators, may hereafter occupy as much land as they may desire.
6. Recently, and in the year last past—viz., 1641—several English families, probably amounting to sixty persons in all, settled, and begun to build and cultivate the land elsewhere, namely, upon the east side of the above-mentioned South River, on a little stream named Ferken's Kil; so have also the above-named subjects of Her Majesty, and participants in the Company, purchased for themselves of the wild inhabitants of the country the whole of this eastern side of the river, from the mouth of the aforesaid great river at Cape May up to a stream named Narraticen's Kil, which tract extends about twelve (12) German miles, including also the said Ferken's Kil, with the intention of thus drawing to themselves the English aforesaid. This purchase the Governor shall always, with all his power, keep intact, and thus bring these families under the jurisdiction and government of Her Royal Majesty and the Swedish crown; especially as we are informed that they themselves are not indisposed thereto; and should they be induced, as a free people, voluntarily to submit themselves to a government which can maintain and protect them, it is believed that they might shortly amount to some hundred strong. But, however that may be, the Governor is to seek to bring these English under the government of the Swedish crown, inasmuch as Her Royal Majesty finds it to be thus better for herself and the crown as partners in this undertaking; and they might also, with good reason, be driven out and away from said place; therefore Her most Royal Majesty aforesaid will most graciously leave it to the on of Governor Printz so to consider and act in the premises as can be done with propriety and success.
7. There is no doubt that the Holland West India Company will seek to appropriate to themselves the place aforesaid, and the large tract of land upon which the English have settled, and the whole of the above-named east side of the Great South River, and that so much the rather as their fort or fortification of Nassau, which they have manned with about twenty (20) men, is not very far therefrom, upon the same eastern side of the river; just as they also make pretensions to the whole western side of the aforesaid South River, and, consequently, to all that of which our subjects aforesaid have taken possession, which they have seized, relying upon their Fort Nassau, whereby they would take possession of the whole South River, and of the whole country situated upon both sides of the same river. It is for this that they have protested against the beginning which her before-mentioned Majesty's subjects have made in settling and building; and, so far as they could, have always opposed and sought to prevent our people from going up the South River and past their Fort Nassau. Therefore shall the Governor take measures for meeting the agents and participants of said Holland West India Company in a proper manner; and with mildness, but firmly, remonstrate, and make known to them the upright intentions of Her Royal Majesty and her subjects in the premises, that nothing has herein been sought, or is now sought, other than a free opening for commerce; that Her Royal Majesty's subjects have, in a just and regular manner, purchased of the proper owners and possessors of the country that district of which they have taken possession, and which they have begun to cultivate; and that they cannot, therefore, without injustice, oppose Her Royal Majesty or her subjects, or seek to disturb them in their possessions without doing them great injury. But should the same Holland Company, contrary to all better hopes, allow themselves to undertake any hostility, or make any attack, then, in such case, it will only be proper to be prepared with the best means that circumstances will allow, and so seek to repel force by force; therefore, as this, like everything else, is best judged of and decided on the ground, so also does Her Royal Majesty place it in the Governor's discretion to meet such vexations, in the first instance, with kind admonitions, but, if these are not effective, then with severity, according to the best of his understanding, so as to arrange everything to the best advantage and honor alike of Her Royal Majesty and the members of the Company. But if no such troubles arise, which it is hoped will be the case, and Her Royal Majesty and her subjects remain undisturbed in that which they have rightfully brought into their possession, then shall the Governor hold good friendship and neighborhood with the aforesaid Hollanders at Fort Nassau, and with those who dwell upon the North River at Mankatan's, or New Amsterdam, as also with the English who dwell in the country of Virginia, and make no inroads upon any of them, nor interfere with that of which they are in the actual possession. Especially, since the adjacent English in Virginia have already commenced to offer Her Royal Majesty's subjects in New Sweden all kinds of useful assistance, and to let them procure, upon reasonable payment, such cattle and seed-corn as they may desire; therefore shall the Governor continually seek to give free and undisturbed course to the correspondence and commerce thus begun with the English, to the use and benefit of Her Royal Majesty's subjects aforesaid.
8. Those Hollanders who have emigrated to New Sweden, and settled there under the protection of Her Royal Majesty and the Swedish crown, over whom Jost von deco Boyandh has command, the Governor shall treat, according to the contents of the charter and privileges conferred by Her Royal Majesty, of the principles whereof the Governor has been advised; but in other respects he shall show them all good-will and kindness, yet so that he shall hold them also to the same, that they, also, upon their side, comply with the requisitions of their charter which they have received. And inasmuch as notice has already been given them that they have settled too near to Fort Christina, and as houses are said to be built at the distance of almost three miles from that place, they should therefore leave that place, and betake themselves to a somewhat greater distance from the said fort. So also does Her Royal Majesty leave it to the good pleasure and prudence of the Governor, when on the ground, duly to consider the deportment of said Hollanders and the situation of the place of which they have taken possession; and, according to his judgment, either let them remain there quietly or make such a disposition and settlement of the matter as lie shall find most suitable and advantageous to Her Royal Majesty and the participants in said Company of navigation.
9. The wild nations, bordering upon all other sides, the Governor shall understand how to treat with all humanity and respect, that no violence or wrong

be done to them by Her Royal Majesty or her subjects aforesaid; but he shall rather, at every opportunity, exert himself that the same wild people may gradually be instructed in the truths and worship of the Christian religion and in other Ways brought to civilization and good government, and in this manner properly guided. Especially shall he seek to gain their confidence, and impress upon their minds that neither he, the Governor, nor his people and subordinates are come into those parts to do them any wrong or injury, but much more for the purpose of furnishing them with such things as they may need for the ordinary wants of life; and so, also, for such things as are found among them which they themselves cannot make for their own use, or buy, or exchange. Therefore shall the Governor also see thereto that the people of Her Royal Majesty, or of the Company who are engaged in trading in those parts, allow the wild people to obtain such things as they need, at a price somewhat more moderate than they are getting them of the Hollanders at Fort Nassau, or the adjacent English; so that said wild people may be withdrawn from them, and be so much the more won to our people.

10. In regard to the Governor's place of residence, Her Royal Majesty leaves it to him to provide and choose the same according as he finds the case to be in the place, or it can be continued where it now is, and the residence arranged and ordered in the most convenient manner possible; in like manner shall the Governor also provide a suitable place for a fortress, either at Cape Henlopen or the island called "James' Island," or wherever else a good site for the same may be found: wherein he has especially to keep in view these considerations above all others, namely, that by such a fortification it should be possible to close up the South River, having it commanded by the same fortress, and that there should also be found there, without great difficulty, a suitable harbor wherein the ships of Her Royal Majesty and her subjects could be in security, and, if need so were, continue to lie there over winter.
11. And if the Governor does not find it necessary at once and hastily to fortify another new place, but can for the present properly defend himself by Fort Christina, then shall he so much the more zealously at once arrange and urge forward agriculture and the improvement of the land, setting and urging the people thereto with zeal and energy, exerting him the ground that the people may derive from it their necessary food.
12. Next to this, he shall pay the necessary attention to the culture of tobacco, and appoint thereto a certain number of laborers, so arranging that the produce may be large, more and more being set out and cultivated from time to time, so that he can send over a good quantity of tobacco on all ships coming hither.
13. That better arrangements may be made for the production of cattle, both great and small, the Governor shall at once exert himself to obtain a good breed of cattle of all kinds, and especially of that which is sent out from this country, and also seek to obtain a supply from the neighboring English, dividing everything with those who will use and employ it in agriculture in exchange for seed, and with such prudence as he shall find most serviceable to the members of the Company.
14. Among and above other things, he shall direct his attention to sheep, to obtain them of good kinds, and, as soon as may be, seek to arrange as many sheep-folds as he conveniently can, so that presently a considerable supply of wool of good quality may be sent over to this country.
15. The peltry-trade with the natives he shall, also, so far as possible, seek to sustain in a good state, exercise a careful inspection of all engaged in it, prevent all frauds in established commissions, and take care that Her Royal Majesty and her subjects, and the members of the Company, may have reason to expect good returns for their cargoes. In like manner, he shall provide that no other persons whatever be permitted to traffic with the natives in peltries; but this trade shall be carried on only by persons thereto appointed in the name of the whole Company, and in its ways.
16. Whatever else it may at present be necessary to do in that country will be best committed to the hands of the Governor in the country, according to the circumstances of the time and place; more especially as the same land of New Sweden is situated in the same climate with Portugal; so, apparently, it is to be expected that salt-works might be arranged on the sea coasts. But, if the salt could not be perfectly evaporated by the heat of the sun, yet, at the least, the salt water might be brought to such a grade that it might afterwards be perfectly condensed by means of fire, without great labor or expense which the Governor must consider, and make such experiment, and, if possible, put it into operation and make it effective.
17. And, as almost everywhere in the forests wild grapevines and grapes are found, and the climate seems to be favorable to the production of wine, so shall the Governor also direct his thoughts to the timely introduction of this culture, and what might herein be devised and effected.
18. He can also have careful search made everywhere as to whether any metals or minerals are to be found in the country, and, if any are discovered, send hither correct information, and then await further orders from this place.
19. Out of the abundant forests, the Governor shall examine and consider how and in what manner profit may be derived from the country; especially what kind of advantages may be expected from oak-trees and walnut-trees, and whether a good quality of them might be sent over here as ballast. So also it might be examined whether oil might not be advantageously pressed out of the walnuts.
20. The Governor shall likewise take into consideration and correctly inform himself how and where fisheries might be most profitably established; especially as it is said that at a certain season of the year the whale fishery can be advantageously prosecuted in the aforesaid Godin's Bay, and adjacently; he shall therefore have an eye upon this and send over hither all needed information as to what can be done in this and other matters connected with the country, and what further hopes may be entertained in reference thereto.
21. The Governor shall also carefully inquire and inform himself in regard to the food and convenience for keeping great number of silkworms, wherewith a manufacture might be established; and, if he discovers that something useful might thus be accomplished, he shall take measures for the same.
22. Whatever else could be done in connection with the successful cultivation of the land, but cannot be introduced just for the present, this Her Royal Majesty will graciously have entrusted to the fidelity, foresight, and zeal of the Governor, with the earnest command and admonition that he seek in all matters to uphold the service and dignity of Her Royal Majesty and the crown of Sweden, as also to promote the advantage and interest of the members of the Company, in the conservation of the same land of New Sweden, its culture in every way possible, and the increase of its profitable commerce.
23. But, far above all this, as to what belongs to the political government and administration of justice, everything of this kind must be conducted under the name of Her Royal Majesty and the crown of Sweden, for no less reason than that the country enjoys the protection of Her Royal Majesty and of

the crown, and that the interest of the crown is in the highest degree involved in the protection of that country, its cultivation, and active trade and commerce. To give the Governor specific information herein cannot so well and effectually be done at so great a distance; it must therefore be left to his own discretion and good sense that lie upon the ground provide, arrange, and execute whatever conduces to bring matters into good order and a proper constitution, according as he finds the necessities of the time and place to require. At first, and until matters can be brought into a better form, the Governor may use his own seal, but in a somewhat larger form, in briefs, contracts, correspondence, and other written documents of a public character.

24. He shall decide all matters of controversy which may arise, according to Swedish law and right, custom and usage; but in all other matters, also, so far as possible, he shall adopt and employ the laudable customs, habits, and usages of this most praiseworthy realm.
25. He shall also have power, through the necessary and proper means of compulsion, to bring to obedience and a quiet life the turbulent and disorderly, who will not live quietly and peacefully, and especially gross offenders, who may possibly be found; he may punish, not only with imprisonment and the like duly proportioned means of correction, but, also, according to their misdeeds or crimes, with the loss of life itself, yet not in any other than the usual manner, and after the proper hearing and consideration of the case, with the most respectable people and the most prudent associate judges who can be found in the country as his counsellors.
26. Above all things, shall the Governor consider and see to it that a true and due worship, becoming honor, laud, and praise be paid to the Most High God in all things, and to that end all proper care shall be taken that divine service be zealously performed, according to the unaltered Augsburg Confession, the Council of Upsala, and the ceremonies of the Swedish Church; and all persons, but especially the young, shall be duly instructed in the articles of their Christian faith; and all good church discipline shall, in like manner, be duly exercised and received. But so far as relates to the Holland colonists that live and settle under the government of Her Royal Majesty and the Swedish crown, the Governor shall not disturb them in the indulgence granted them as to the exercise of the Reformed religion according to the aforesaid Royal Charter.
27. In all else which cannot here be set down in writing, the Governor shall conduct himself as is suitable and becoming to a faithful patriot, and take into due consideration whatever is correspondent to his office, according to the best of his understanding and with the greatest zeal and care, also regulating himself in accordance with that which may be here communicated to him by word of mouth; and there is herewith given him a special list of the people who accompany him, and of the means and equipment of his office.
28. Finally, Her Royal Majesty is also well satisfied that the said office of his government shall continue and exist for three years, after the lapse of which he, the said John Printz, shall be free to return hither again, after the necessary arrangements have been made in regard to his successor, or some substitute in the said service. Should he, the said John Printz, have a desire to continue longer in this charge, he shall have the preference over others therefor, provided that the advantage and service of Her Majesty and the crown, and of the Company, so demand. Given as above.

PAEHR BRAHE,

HERMAN WRANGEL,

CLAES FLEMMING,

AXEL OXENSTIERNA,

GABRIEL BENGTTSSON OXENSTIERNA

AND. GYLLENKLOU.

The voyage to New Sweden was at that time quite long. The watery way to the West was not yet well discovered, and, therefore, for fear of the sand-banks off Newfoundland, they kept their course to the east and south as far as to what were then called the Brazates. The ships which went under the command of Governor Printz sailed along the coast of Portugal, and down the coast of Africa, until they found the eastern passage, then directly over to America, leaving the Canaries high up to the north. They landed at Antigua, then continued their voyage northward, past Virginia and Maryland, to Cape Hinlopen. Yet, in view of the astonishingly long route which they took, the voyage was quick enough in ... from Stockholm on August 16, 1642, to the new fort of Christina, in New Sweden, on February 15, 1643.

The Swedes who emigrated to America belonged partly to a trading company, provided with a charter, who, for their services, according to their condition or agreement, were to receive pay and monthly wages; a part of them also went at their own impulse to try their fortune. For these it was free to settle and live in the country as long as they pleased or to leave it, and they were therefore, by way of distinction from the others, called freemen. At first, also, malefactors and vicious people were sent over, who were used as slaves to labor upon the fortifications. They were kept in chains and not allowed intercourse with the other settlers; moreover, a separate place of abode was assigned to them. The neighboring people and country were dissatisfied that such wretches should come into the colony. It was also, in fact, very objectionable in regard to the heathen, who might be greatly offended by it. Whence it happened that, when such persons came over in Governor Printz's time, it was not permitted that one of them should set foot upon the shore, but they had all to be carried back again, whereupon a great part of them died during the voyage or perished in some other way. Afterwards it was forbidden at home in Sweden, under a penalty, to take for the American voyage any persons of bad fame; nor was there ever any lack of good people for the colony.

Governor Printz was now in a position to put the government upon a safe footing to maintain the rights of the Swedes, and to put down the attempts of the Hollanders. They had lately, before his arrival, pitched their little Fort Nassau. On this account he selected the island of Tenackong as his residence, which is sometimes also called Tutaeenung and Tenicko, about three Swedish miles from Fort Christina. The convenient situation of the place suggested its selection, as also the location of Fort Nassau, which lay some miles over against it, to which he could thus command the passage by water. The new fort, which was erected and provided with considerable armament, was called New Götheborg. His place of residence, which he adorned with orchards, gardens, a pleasure-house, etc., he named Printz Hall. A handsome wooden church was also built at the same place, which Alagister Campanius consecrated, on the last great prayer-day which was celebrated in New Sweden, on the 4th of September, 1646. Upon that place also all the most prominent freemen had their residences and plantations.

Pennsylvania Charter of Privileges (1701)

William Penn, proprietor of an extensive land grant called Pennsylvania, gave the colonists a new frame of government through the 1701 charter of privileges. This charter increased the powers of the general assembly, setting the stage for self-government. It secured the rights of the accused to representation and was the colony's equivalent of the Magna Carta, guaranteeing religious liberty in Pennsylvania. The charter remained in force until it was replaced by the state constitution in 1776. What we know as the Liberty Bell was cast to commemorate the fiftieth anniversary of this charter of privileges.

[28 October 1701]

William Penn Proprietary and Governour of the Province of Pennsylvania and Territories thereunto belonging To all to whom these presents shall come Sendeth Greeting.

WHEREAS King Charles the Second by his Letters Patents under the Great Seale of England beareing Date the fourth day of March in the Yeare one thousand, Six hundred and Eighty was Graciously pleased to Give and Grant unto me my heires and Assignes forever this Province of Pennsylvania with divers great powers and Jurisdictions for the well Governement thereof.

AND WHEREAS the King's dearest Brother James Duke of York and Albany &c by his Deeds of Feofment under his hand and Seale duely perfected beareing date the twenty fourth day of August one thousand Six hundred Eighty and two Did Grant unto me my heires and Assignes All that Tract of Land now called the Territories of Pennsylvania together with powers and Jurisdictions for the good Government thereof.

AND WHEREAS for the Encouragement of all the Freemen and Planters that might be concerned in the said Province and Territories and for the good Governement thereof I the said William Penn in the yeare one thousand Six hundred Eighty and three for me my heires and Assignes Did Grant and Confirme unto all the Freeman Planters and Adventurers therein Divers Liberties Franchises and properties as by the said Grant Entituled the Frame of the Government of the Province of Pensilvania and Territories thereunto belonging in America may Appeare which Charter or Frame being found in Some parts of it not soe Suitable to the present Circumstances of the Inhabitants was in the third Month in the yeare One thousand Seven hundred Delivered up to me by Six parts of Seaven of the Freemen of this Province and Territories in Generall Assembly mett provision being made in the said Charter for that End and purpose.

AND WHEREAS I was then pleased to promise that I would restore the said Charter to them againe with necessary Alterations or in lieu thereof Give them another better adapted to Answer the present Circumstances and Conditions of the said Inhabitants which they have now by their Representatives in a Generall Assembly mett at Philadelphia requested me to Grant.

KNOW YE THEREFORE that for the further well being and good Governement of the said Province and Territories and in pursuance of the Rights and Powers before mencioned I the said William Penn doe Declare Grant and Confirme unto all the Freemen Planters and Adventurers and other Inhabitants in this Province and Territories these following Liberties Franchises and Priviledges soe far as in me lyeth to [be] held Enjoyed and kept by the Freemen Planters and Adventurers and other Inhabitants of and in the said Province and Territories thereunto Annexed for ever.

FIRST Because noe people can be truly happy though under the Greatest Enjoyments of Civil Liberties if Abridged of the Freedom of their Consciences as to their Religious Profession and Worship. And Almighty God being the only Lord of Conscience Father of Lights and Spirits and the Author as well as Object of all divine knowledge Faith and Worship who only [can] Enlighten the mind and perswade and Convince the understandings of people.

I doe hereby Grant and Declare that noe person or persons Inhabiting in this Province or Territories who shall Confesse and Acknowledge one Almighty God the Creator upholder and Ruler of the world and professe him or themselves Obliged to live quietly under the Civill Governement shall be in any case molested or prejudiced in his or their person or Estate because of his or their Conscientious perswasion or practice nor be compelled to frequent or maintaine any Religious Worship place or Ministry contrary to his or their mind or doe or Suffer any other act or thing contrary to their Religious perswasion.

And that all persons who also professe to beleive in Jesus Christ the Saviour of the world shall be capable (notwithstanding their other perswasions and practices in point of Conscience and Religion) to Serve this Governement in any capacity both Legislatively and Executively he or they Solemnly promising when lawfully required Allegiance to the King as Sovereigne and fidelity to the Proprietary and Governour.

And taking the Attests as now Establishd by the law made at Newcastle in the yeare One thousand Seven hundred Intituled an Act directing the Attests of Severall Officers and Ministers as now amended and Confirmed this present Assembly.

SECONDLY For the well Governeing of this Province and Territories there shall be an Assembly yearly Chosen by the Freemen thereof to Consist of foure persons out of each County of most note for Virtue wisdom and Ability (Or of a greater number at any time as the Governour and Assembly shall agree) upon the first day of October forever And shall Sitt on the Fourteenth day of the said Month in Philadelphia unless the Governour and Councell for the time being shall See cause to appoint another place within the said Province or Territories. Which Assembly shall have power to choose a Speaker and other their Officers and shall be judges of the Qualifications and Elections of their owne Members Sitt upon their owne Adjournments, Appoint Committees prepare Bills in or to pass into Laws Impeach Criminalls and Redress Greivances and shall have all other Powers and Priviledges of an Assembly according to the Rights of the Freeborne Subjects of England and as is usuall in any of the Kings Plantations in America.

And if any County or Counties shall refuse or neglect to choose their respective Representatives as aforesaid or if chosen do not meet to Serve in Assembly those who are soe chosen and mett shall have the full power of an Assembly in as ample manner as if all the representatives had beene chosen and mett Provided they are not less then two thirds of the whole number that ought to meet.

And that the Qualifications of Electors and Elected and all other matters and things Relateing to Elections of Representatives to Serve in Assemblies though not herein perticularly Express shall be and remaine as by a Law of this Government made at Newcastle in the Yeare One thousand [Seven] hundred Intituled An act to ascertaine the number of members of assembly and to Regulate the elections.

THIRDLY That the Freemen [in Ea]ch Respective County at the time and place of meeting for Electing [th]eir Representatives to serve in Assembly may as often as there shall be Occasion choose a Double number of persons to present to the Governour for Sheriffes and Coroners to Serve for three Yeares if they Soe long behave themselves well out of which respective Elections and Presentments the Governour shall nominate and Commissionate one for each of the said Officers the third day after Such Presentment or else the first named in Such Presentment for each Office as aforesaid shall Stand and Serve in that Office for the time before respectively Limited.

And in case of Death and Default Such Vacancies shall be Supplied by the Governour to serve to the End of the said Terme Provided allwayes that if the said Freemen shall at any time neglect or decline to choose a person or persons for either or both the aforesaid Offices then and in Such case the persons that are or shall be in the respective Offices of Sheriffes or Coroner at the time of Election shall remaine therein until they shall be removed by another Election as aforesaid.

And that the Justices of the respective Counties shall or may nominate and present to the Governour three persons to Serve for Clerke of the Peace for the said County when there is a vacancy, one of which the Governour shall Commissionate within Tenn dayes after Such Presentment or else the first Nominated shall Serve in the said Office during good behaviour.

FOURTHLY That the Laws of this Government shall be in this Stile Vizt "By the Governour with the Consent and Approbation of the Freemen in Generall Assembly mett" And shall be after Confirmation by the Governour forthwith Recorded in the Rolls Office and kept at Philadelphia unless the Governour and Assembly shall Agree to appoint another place.

FIFTHLY that all Criminalls shall have the same Priviledges of Witnesses and Councill as their Prosecutors.

SIXTHLY That noe person or persons shall or may at any time hereafter be obliged to answer any Complaint matter or thing whatsoever relateing to Property before the Governour and Councill or in any other place but in the Ordinary courts of Justice unless Appeales thereunto shall be hereafter by law appointed.

SEVENTHLY That noe person within this Governement shall be Licensed by the Governour to keep Ordinary Taverne or house of publick entertainment but Such who are first recommended to him under the hands of the Justices of the respective Counties Signed in open Court which Justices are and shall be hereby Impowred to Suppress and forbid any person keeping Such publick house as aforesaid upon their Misbehaviour on such penalties as the law doth or shall Direct and to recommend others from time to time as they shall see occasion.

EIGHTHLY If any person through Temptation or Melancholly shall Destroy himselfe his Estate Reall and personall shall notwithstanding Descend to his wife and Children or Relations as if he had dyed a Naturall Death. And if any person shall be Destroyed or kill'd by casualty or Accident there shall be noe forfeiture to the Governour by reason thereof And noe Act Law or Ordinance whatsoever shall at any time hereafter be made or done to Alter Change or Diminish the forme or Effect of this Charter or of any part or Clause therein Contrary to the True intent and meaning thereof without the Consent of the Governour for the [time being and] six parts of Seven of the Assembly [mett].

But because the happiness of Mankind Depends So much upon the Enjoying of Libertie of their Consciences as aforesaid I Doe hereby Solemnly Declare Promise and Grant for me my heires and Assignes that the first Article of this Charter Relateing to Liberty of Conscience and every part and Clause therein according to the True Intent and meaneing thereof shall be kept and remaine without any Alteration Inviolably for ever.

AND LASTLY I the said William Penn Proprietary and Governour of the Province of Pensilvania and Territories thereunto, belonging for my Selfe my heires and Assignes Have Solemnly Declared Granted and Confirmed And doe hereby Solemnly Declare Grant and Confirme that neither I my heires or Assignes shall procure or doe any thing or things whereby the Liberties in this Charter contained and expressed nor any part thereof shall be Infringed or broken And if any thing shall be procured or done by any person or persons contrary to these presents it shall be held of noe force or Effect.

IN WITNES WHEREOF I the said William Penn at Philadelphia in Pensilvania have unto this present Charter of Liberties Sett my hand and Broad Seale this twenty Eighth day of October in the Yeare of our Lord one thousand Seven hundred and one being the thirteenth yeare of the Reigne of King William the Third over England Scotland France and Ireland &c And in the Twenty first Yeare of my Government.

AND NOTWITHSTANDING the closure and Test of this present Charter as aforesaid I think fitt to add this following Provisoe thereunto as part of the same That is to say that notwithstanding any Clause or Clauses in the above mentioned Charter obligeing the Province and Territories to Joyne Together in Legislation I am Content and doe hereby Declare That if the representatives of the Province and Territories shall not hereafter Agree to Joyne together in Legislation and that the same shall be Signified to me or my Deputy In open Assembly or otherwise from under the hands and Seales of the Representatives (for the time being) of the Province or Territories or the Major part of either of them any time within three yeares from the Date hereof That in Such case the Inhabitants of each o' the three Counties of this Province shall not have less then Eight persons to represent them in Assembly for the Province and the Inhabitants of the Towne of Philadelphia (when the said Towne is Incorporated). Two persons to represent them in Assembly and the Inhabitants of each County in the Territories shall have as many persons to represent them in a Distinct Assembly for the Territories as shall be requested by them as aforesaid. Notwithstanding which Separation of the Province and Territories in Respect of Legislation I doe hereby promise Grant and Declare that the Inhabitants of both Province and Territories shall Separately Injoy all other Liberties Priviledges and Benefitts granted Joyntly to them in this Charter Any law usage or Custome of this Governement heretofore made and Practised or any law made and Passed by this Generall Assembly to the Contrary hereof Notwithstanding.

Wm Penn

The Journal of Sarah Kemble Knight (1704)

Sarah Kemble Knight, a Boston widow, traveled on business to New York City in 1704. She kept a journal of her adventures over a five-month period, relating her use of guides, her dangerous travels over land and water, her accommodations, and her observations of various towns along the way. She comments, for example, on the rigidity of punishment exacted in the colony of Connecticut and makes comparisons in the Sabbath observances in Boston and New York.

MONDAY, Oct[o]b[e]r ye 2d, 1704.—About three o'clock afternoon, I begun my Journey from Boston to New-Haven; being about two Hundred Mile. My Kinsman, Capt. Robert Luist, waited on me as farr as Dedham, where I was to meet ye Western post.

I vissitted the Reverd. Mr. Belcher, ye Minister of ye town, and tarried there till evening, in hopes ye post would come along. But he not coming, I resolved to go to Billingses where he used to lodg, being 12 miles further. But being ignorant of the way, Madm Billings, seing no persuasions of her good spouses or hers could prevail with me to Lodg there that night, Very kindly went wyth me to ye Tavern, where I hoped to get my guide, And desired the Hostess to inquire of her guests whether any of them would go with mee. But they being tyed by the Lipps to a pewter engine, scarcely allowed themselves time to say what clownish....

[Here half a page of the MS. is gone.]

... Peices of eight, I told her no, I would not be accessary to such extortion.

Then John shan't go, sais shee. No, indeed, shan't hee; And held forth at that rate a long time, that I began to fear I was got among the Quaking tribe, beleiving not a Limbertong'd sister among them could out do Madm. Hostes.

Upon this, to my no small surprise, son John arose, and gravely demanded what I would give him to go with me? Give you, sais I, are you John? Yes, says he, for want of a Better; And behold! this John look't as old as my Host, and perhaps had bin a man in the last Century. Well, Mr. John, sais I, make your demands. Why, half a pss. of eight and a dram, sais John. I agreed, and gave him a Dram (now) in hand to bind the bargain.

My hostess catechis'd John for going so cheep, saying his poor wife would break her heart....

[Here another half page of the MS. is gone.]

... His shade on his Hors resembled a Globe on a Gate post. His habitt, Hors and furniture, its looks and goings Incomparably answered the rest.

Thus jogging on with an easy pace, my Guide telling mee it was dangero's to Ride hard in the Night, (whch his horse had the sence to avoid,) Hee entertained me with the Adventurs he had passed by late Rideing, and eminent Dangers he had escaped, so that, Remembring the Hero's in Parismus and the Knight of the Oracle, I didn't know but I had mett wth a Prince disguis'd.

When we had Ridd about an how'r, wee come into a thick swamp, wch. by Reason of a great fogg, very much startled mee, it being now very Dark. But nothing dismay'd John: Hee had encountered a thousand and a thousand such Swamps, having a Universall Knowledge in the woods; and readily Answered all my inquiries wch. were not a few.

In about an how'r, or something more, after we left the Swamp, we come to Billingses, where I was to Lodg. My Guide dismounted and very Complasantly help't me down and shewd the door, signing to me Wth his hand to Go in; wch I Gladly did—But had not gone many steps into the Room, ere I was Interogated by a young Lady I understood afterwards was the Eldest daughter of the family, with these, or words to this purpose, (viz.) Law for mee—what in the world brings You here at this time a night?—I never see a woman on the Rode so Dreadfull late, in all the days of my versall life. Who are You? Where are You going? I'me star'd out of my witts—with much now of the same Kind. I stood aghast, Prepareing to reply, when in comes my Guide—to him Madam turn'd, Roreing out: Lawfull heart, John, is it You?—how de do! Where in the world are you going with this woman? Who is she? John made no Ansr. but sat down in the corner, fumlèd out his black Junk', and saluted that instead of Debb; she then turned agen to mee and fell anew into her silly questions, without asking me to sitt down.

I told her shee treated me very Rudely, and I did not think it my duty to answer her unmannerly Questions. But to get ridd of them, I told her I come there to have the post's company with me to-morrow on my Journey, & c. Miss star'd awhile, drew a chair, bid me sitt, And then run up stairs and putts on two or three Rings, (or else I had not seen them before,) and returning, sett herself just before me, showing the way to Reding, that I might see her Ornaments, perhaps to gain the more respect. But her Granam's new Rung s sow, had it appeared, would affected me as much. I paid honest John with money and dram according to contract, and Dismist him, and pray'd Miss to shew me where I must Lodg. Shee conducted me to a parlour in a little back Lento, wch was almost fill'd wth the bedsted, wch was so high that I was forced to climb on a chair to gitt up to ye wretched b.,d that lay on it; on wch having Stretcht my tired Limbs, and lay'd my head on a Sad-colour'd pillow, I began to think on the transactions of ye past day.

Tuesday, October ye 3d, about 8 in the morning, I with the Post proceeded forward without observing any thing remarkable; And about two, on, Arrived at the Post's second stage, where the western Post mett him and exchanged Letters. Here, having called for something to eat, ye woman bro't in a Twisted thing like a cable, but something whiter; and laying it on the bord, tugg'd for life to bring it into a capacity to spread; wch having wth great pains accomplished, shee serv'd in a dish of Pork and Cabage, I suppose the remains of Dinner. The sause was of a deep Purple, wch I tho't was boil'd in her dye Kettle; the bread was Indian, and every thing on the Table service Agreeable to these. I, being hungry, gott a little down; but my stomach was soon cloy'd, and what cabbage I swallowed serv'd me for a Cudd the whole day after.

Having here discharged the Ordinary for self and Guide; (as I understood was the custom,) About Three afternoon went on with my Third Guide, who Rode very hard; and having crossed Providence Ferry, we come to a River wch they Generally Ride thro'. But I dare not venture; so the Post got a Ladd and Cannoo to carry me to tother side, and hee rid thro' and Led my hors. The Cannoo was very small and shallow, so that when we were in she seem'd redy to take in water, which greatly terrified mee, and caused me to be very circumspect, sitting with my hands fast on each side, my eyes stedy, not daring so much as to lodg my tongue a hair's breadth more on one side of my mouth then tother, nor so much as think on Lott's wife, for a wry thought would have oversett our wherey: But was soon put out of this pain, by feeling the Cannoo on shore, wch I as soon almost saluted with my feet; and Rewarding my sculler, again mounted and made the best of our way forwards. The Rode here was very even and ye day pleasant, it being now near Sunsett. But the Post told mee we had neer [?] miles to Ride to the next Stage, (where we were to Lodg.) I askt him of the rest of the Rode, foreseeing wee must travail in the night. Hee told mee there was a bad River we were to Ride thro', was so very firce a hors could sometimes hardly stem it: But it was but narrow, and wee should soon be over. I cannot express The concern of mind this relation sett me in: no thoughts but those of the dang'ros River could entertain my Imagination, and they were as formidable as varios, still Tormenting me with blackest Ideas of my Approaching fate—Sometimes seing my self drowning, otherwhiles drowned, and at the best like a holy Sister just come out of a Spiritual Bath in dripping Garments.

Now was the Glorious Luminary, wth his swift Coursers arrived at his Stage, leaving poor me wth the rest of this part of the lower world in darkness, with which wee were soon Surrounded. The only Glimering we now had was from the spangled Skies, Whose Imperfect Reflections rendered every Object formidable. Each lifeless Trunk, with its shatter'd Limbs, appear'd an Armed Enymie; and every little stump like a Ravenous devourer. Nor could I so much as discern my Guide, when at any distance, which added to the terror.

Thus, absolutely lost in Thought, and dying with the very thoughts of drowning, I come up wth the post, who I did not see till even with his Hors: he told mee he stopt for mee; and wee Rode on Very deliberately a few paces, when we entred a Thickett of Trees and Shrubbs, and I perceived by the Hors's going, we were on the descent of a Hill, wch, as wee come neerer the bottom,'twas totally dark wth the Trees that surrounded it. But I knew by the Going of the Hors wee had entred the water, wch my Guide told mee was the hazzardos River he had told me off; and bee, Riding up close to my Side, Bid me not fear we should be over Imediatly. I now ralyed all the Courage I Was mistriss of, Knowing that I must either Venture my fate of drowning, or be left like ye Children in the wood. So, as the Post bid me, I gave Reins to my Nagg; and sitting as Stedy as just before in the Cannoo, in a few minutes got safe to the other side, which bee told mee was the Narragansett country.

Here We found great difficulty in Travailing, the way being very narrow, and on each side the Trees and bushes gave us very unpleasent welcomes with their Branches and bow's, wch wee could not avoid, it being so exceeding dark. My Guide, as before so now, putt on harder than I, wth my weary bones, could follow; so left mee and the way beehind him. Now Returned my distressed aprehensions of the place where I was: the dolesome woods, my Company next to none, Going I knew not whither, and encompassed wth Terrifying darkness; The least of which was enough to startle a more Masculine courage. Added to which the Reflections, as in the afternoon of ye day that my Call was very Questionable, wch till then I had not so Prudently as I ought considered. Now, coming to ye foot of a hill, I found great difficulty in ascending; But being got to the Top, was there amply recompensed with the friendly Appearance of the Kind Conductress of the night, Just then Advancing above the Horisontall Line. The Raptures wch the Sight of that fair Planett produced in mee, caused mee, for the Moment, to forgett my present wearyness and past toils; and Inspir'd me for most of the remaining way with very divirting tho'ts, some of which, with the other Occurances of the day, I reserved to note down when I should come to my Stage. My tho'ts on the sight of the moon were to this purpose:

Fair Cynthia, all the Homage that I may
Unto a Creature, unto thee I pay;
In Lonesome woods to meet so kind a guide,
To Mee's more worth than all the world beside.
Some Joy I felt just now, when safe got or'e
Yon Surly River to this Rugged shore,
Deeming Rough welcomes from these clownish Trees,
Better than Lodgings wth Nereidees.
Yet swelling fears surprise; all dark appears—
Nothing but Light can disipate those fears.
My fainting vitals can't lend strength to say,
But softly whisper, O I wish 'twere day.
The murmer hardly warma the Ambient air,
E' re thy Bright Aspect rescues from dispair:
Makes the old Hagg her sable mantle loose,

And a Bright joy do's through my Soul diffuse.
The Boistero's Trees now Lend a Passage Free,
And pleasant prospects thou giv'st light to see.

From hence wee kept on, with more ease y'n before: the way being smooth and even, the night warm and serene, and the Tall and thick Trees at a distance, especially w'n the moon glar'd light through the branches, fill'd my Imagination with the pleasant delusion of a Sumptuous citty, fill'd wth famous Buildings and churches, wth their spiring steeples, Balconies, Galleries and I know not what: Granduers woh I had heard of, and wch the stories of foreign countries had given me the Idea of.

Here stood a Lofty church—there is a steeple,
And there the Grand Parade—
O see the people!
That Famous Castle there, were I but nigh,
To see the mote and Bridg and walls so high—
They'r very fine! sais my deluded eye.

Being thus agreeably entertained without a thou't of any thing but thoughts themselves, I on a sudden was Rous'd from these pleasing Imaginations, by the Post's sounding his horn, which assured mee hee was arrived at the Stage, where we were to Lodg: and that musick was then most musickall and agreeable to mee.

Being come to mr. Havens', I was very civilly Received, and courteously entertained, in a clean comfortable House; and the Good woman was very active in helping off my Riding clothes, and then ask't what I would eat. I told her I had some Chocolett, if shee would prepare it; which with the help of some Milk, and a little clean brass Kettle, she soon effected to my satisfaction. I then betook me to my Apartment, wch was a little Room parted from the Kitchen by a single bord partition; where, after I had noted the Occurrances of the past day, I went to bed, which, tho' pretty hard, Yet neet and handsome. But I could get no sleep, because of the Clamor of some the of Town tope-ers in next Room, Who were entred into a strong debate concerning ya Signification of the name of their Country, (viz.) Narraganset. One said it was named so by ya Indians, because there grew a Brier there, of a prodigious Highth and bigness, the like hardly ever known, called by the Indians Narragansett; And quotes an Indian of so Barberous a name for his Author, that I could not write it. His Antagonist Replyed no—It was from a Spring it had its name, wch hee well knew where it was, which was extreem cold in summer, and as Hott as could be imagined in the winter, which was much resorted too by the natives, and by them called Narragansett, (Hott and Cold,) and that was the originall of their places name—with a thousand Impertinances not worth notice, wch He utter'd with such a Roreing voice and Thundering blows with the fist of wickedness on the Table, that it peirc'd my very head. I heartily fretted, and wish't 'um tongue tyed; but wth as little succes as a freind of mine once, who was (as shee said) kept a whole night awake, on a Jorny, by a country Left.' and a Sergeant, Insigne and a Deacon, contriving how to bring a triangle into a Square. They kept calling for tother Gill, wah while they were swallowing, was some Intermission; But presently, like Oyle to fire, encreased the flame. I set my Candle on a Chest by the bed side, and setting up, fell to my old way of composing my Resentments, in the following manner:

I ask thy Aid, O Potent Rum!
To Charm these wrangling Topers Dum.
Thou hast their Giddy Brains possest—
The man confounded wth the Beast—
And I, poor I, can get no rest.
Intoxicate them with thy fumes:
O still their Tongues till morning comes!

And I know not but my wishes took effect, for the dispute soon ended wth 'tother Dram; and so Good night!

Wednesday, Octob[er] 4th. About four in the morning, we set out for Kingston (for so was the Town called) with a french Docter in our company.—lee and ye Post put on very furiously, so that I could not keep up with them, only as now and then they'd stop till they see mee. This Rode was poorly furnished wth accommodations for Travellers, so that we were forced to ride 22 miles by the post's account, but neerer thirty by mine, before wee could bait so much as our Horses, wch I exceedingly complained of. But the post encourag'd mee, by saying wee should be well accommodated anon at mr. Devil's, a few miles further. But I questioned whether we ought to go to the Devil to be helpt out of affliction. However, like the rest of Deluded souls that post to ye Infernal denn, Wee made all posible speed to this Devil's Habitation; where alliting, in full assurance of good accommodation, wee were going in. But meeting his two daughters, as I suposed twins, they so neerly resembled each other, both in features and habit, and look't as old as the Divel himselfe, and quite as Ugly, We desired entertainm't, but could hardly get a word out of 'um, till with our Importunity, telling them our necessity, & c. they call'd the old Sophister, who was as sparing of his words as his daughters had bin, and no, or none, was the reply's bee made us to our demands. Hee differed only in this from the old fellow in to'ther Country: bee let us depart. However, I thought it proper to warn poor Travailers to endeavour to Avoid falling into circumstances like ours, wch at our next Stage I sat down and did as followeth:

May all that dread the cruel feind of night
Keep on, and not at this curs't Mansion light.'
Tis Hell; 'tis Hell! and Devils here do dwell:
Here dwells the Devill—surely this's Hell.
Nothing but Wants: a drop to cool yo'r
Tongue Cant be procur'd these cruel Feinds among.
Plenty of horrid Grins and looks sevear,
Hunger and thirst, But pitty's bannish'd here—
The Right hand keep, if Hell on Earth you fear!

Thus leaving this habitation of cruelty, we went forward; and arriving at an Ordinary about two mile further, found tollerable accommodation. But our

Hostes, being a pretty full mouth'd old creature, entertain'd our fellow traveller, ye french Doctor, wth Innumerable complaints of her bodily infirmities; and whispered to him so lou'd, that all ye House had as full a hearing as bee: which was very diverting to ye company, (of which there was a great many,) as one might see by their sneering. But poor weary I slipt out to enter my mind in my Journal, and left my Great Landly with her Talkative Guests to themselves.

From hence we proceeded (about ten forenoon) through the Narragansett country, pretty Leisurely; and about one afternoon come to Paukatoug River, wch was about two hundred paces over, and now very high, and no way over to to'ther side but this. I darid not venture to Ride thro, my courage at best in such cases but small, And now at the Lowest Ebb, by reason of my weary, very weary, hungry and uneasy Circumstances. So takeing leave of my company, tho' wth no little Reluctance, that I could not proceed wth them on my Jorney, Stop at a little cottage just by the River, to wait the Waters falling, web the old man that lived there said would be in a little time, and he would conduct me safe over. This little Hutt was one of the wretchedest I ever saw a habitation for human creatures. It was suported with shores enclosed with Clapboards, laid on Lengthways, and so much asunder, that the Light come throu' every where; the doore tyed on 'Nch a cord in ye place of hinges; The floor the bear earth; no windows but such as the thin covering afforded, nor any furniture but a Bedd wth a glass Bottle hanging at ye head on't; an earthan cupp, a small pewter Bas on, A Bord wth sticks to stand on, instead of a table, and a block or two in ye corner instead of chairs. The family were the old man, his wife and two Children; all and every part being the picture of poverty. Notwithstanding both the Hutt and its Inhabitation were very clean and tydee: to the crossing the Old Proverb, that bare walls make giddy bows-wives.

I Blest myselfe that I was not one of this misserable crew; and the Impressions their wretchedness formed in me caused mee on ye very Spott to say:

Tho' Ill at éase, A stranger and alone,
All my fatigues shall not extort a grone.
These Indigents have hunger wth their ease;
Their best is worn behalfe then my disease.
Their Misirable butt wch Heat and Cold
Alternately without Repulse do hold;
Their Lodgings thyn and hard, their Indian fare,
The mean Apparel which the wretches wear,
And their ten thousand ills wch can't be told,
Makes nature er'e 'tis midle age'd look old.
When I reflect, my late fatigues do seem
Only a notion or forgotten Dreem.

I had scarce done thinking, when an Indian-like Animal come to the door, on a creature very much like himselfe, in mien and feature, as well as Ragged cloathing; and having 'litt, makes an Awkerd Scratch wth his Indian shoo, and a Nodd, situ on Ye block, fumbles out his black Junk, dipps it in ye Ashes, and presents it piping hott to his muscheeto's, and fell to sucking like a calf, without speaking, for near a quarter of an bower. At length the old man said how do's Sarah do? who I understood was the wretches wife, and Daughter to yr old man: he Replyed—as well as can be expected, & c. So I remembred the old say, and suposed I knew Sarah's case. Butt bee being, as I understood, going over the River, as ugly as bee was, I was glad to ask him to show me ye way to Saxtons, at Stoningtoun; wch he promising, I ventur'd over wth the old mans assistance; who having rewarded to content, with my Tatter tailed guide, I Ridd on very slowly thro' Stoningtoun, where the Rode was very Stony and uneven. I asked the fellow, as we went, divers questions of the place and way, & c. I being arrived at my country Saxtons, at Stonington, was very well accommodated both as to victuals and Lodging, the only Good of both I had found since my setting out. Here I heard there was an old man and his Daughter to come that way, bound to N. London; and Ueing now destitute of a Guide, gladly waited for them, being in so good a harbour, and accordingly, *Thirsday, Octob[er] ye 5th*, about 3 in the afternoon, I sat forward with neighbour Polly and Jemima, a Girl about 18 Years old, who hee said he had been to fetch out of the Narragansetts, and said they had Rode thirty miles that day, on a sory lean jade, wth only a Bagg under her for a pillion, which the poor Girl often complain'd was very uneasy.

Wee made Good speed along, wch made poor Jemima make many a sow'r face, the mare being a very hard trotter; and after many a hearty and bitter Oh, she at length Low'd out: Lawful Heart father! this bare mare hurts mee Dingeely, I'me direfull sore I vow; with many words to that purpose: poor Child sais Gaffer—she us't to serve your mother so. I don't care how mother us't to do, quoth Jemima, in a pasionate tone. At which the old man Laught, and kik't his jade o' the side, which made her jolt ten times harder.

About seven that Evening, we come to New London Ferry: here, by reason of a very high wind, we mett with great difficulty in getting over—the Boat tos't exceedingly, and our Horses capper'd at a very surprizing Rate, and set us all in a fright; especially poor Jemima, who desired her father to say so jack to the jade, to make her stand. But the careless parent, taking no notice of her repeated desires, She Rored out in a Passionate manner: Pray suth father, Are you deaf? Say so Jack to the jade, I tell you. The Dutiful Parent obey's; saying so Jack, so Jack, as gravely as if hee'd bin to saying Catechise after Young Miss, who with her fright look't of all coullers in ye Rain Bow.

Being safely arrived at the house of Mrs. Prentices in N. London, I treated neighbour Polly and daughter for their diverting company, and bid them farewell; and between nine and ten at night waited on the Revd Mr. Gurdon Saltonstall, minister of the town, who kindly Invited me to Stay that night at his house, where I was very handsomely and plentifully treated and Lodg'd; and made good the Great Character I had before heard concerning him: viz. that hee was the most affable, courteous, Genero's and best of men.

Friday, Octo[ber] 6th. I got up very early, in Order to hire somebody to go with mee to New Haven, being in Great parplexity at the thoughts of proceeding alone; which my most hospitable entertainer observing, himselfe went, and soon return'd wth a young Gentleman of the town, who he could confide in to Go with mee; and about eight this morning, Wth Mr. Joshua Wheeler my new Guide, takeing leave of this worthy Gentleman, Wee advanced on towards Seabrook. The Rodes all along this way are very bad, Incumbred wth Rocks and mountainous passages, wch were very disagreeable to my tired carcass; but we went on with a moderate pace wel' made ye Journey more pleasant. But after about eight miles Rideing, in going over a Bridge under wch the River Run very swift, my hors stumbled, and very narrowly 'scaped falling over into the water; wch extreemly frightened mee. But through God's Goodness I met with no harm, and mounting agen, in about half a miles Rideing, come to an ordinary, were well entertained by a woman of about seventy and vantage, but of as Sound Intellectuals as one of seventeen. Shee entertain'd Mr. Wheeler wth some passages of a Wedding awhile ago at a

place hard by, the Brides-Groom being about her Age or something above, Saying his Children was dreadfully against their fathers marrying, wch shee condemned them extreemly for.

From hence wee went pretty briskly forward, and arriv'd at Saybrook ferry about two of the Clock afternoon; and crossing it, wee call'd at an Inn to Bait, (foreseeing we should not have such another Opportunity till we come to Killingsworth.) Landlady come in, with her hair about her ears, and hands at full pay scratching. Shee told us shee had some mutton wch shee would broil, wch I was glad to hear; But I suppose forgot to wash her scratchers; in a little time shee brot it in; but it being pickled, and my Guide said it smelt strong of head sause, we left it, and pd sixpence a piece for our Dinners, wch was only smell.

So wee putt forward with all speed, and about seven at night come to Killingsworth, and were tollerably well with Travillers fare, and Lodgd there that night.

Saturday, Oct[ober] 7th, we sett out early in the Morning, and being something unaquainted wth the way, having ask't it of some wee mett, they told us wee must Ride a mile or two and turne down a Lane on the Right hand; and by their Direction wee Rode on but not Yet comeing to ye turning, we mett a Young fellow and ask't him how farr it was to the Lane which turn'd down towards Guilford. Hee said wee must Ride a little further, and turn down by the Corner of uncle Sams Lott. My Guide vented his Spleen at the Lubber; and we soon after came into the Rhode, and keeping still on, without any thing further Remarkabell, about two a clock afternoon we arrived at New Haven, where I was received with all Possible Respects and civility. Here I discharged Mr. Wheeler with a reward to his satisfaction, and took some time to rest after so long and toilsome a journey; And Inform'd mysele of the manners and customs of the place, and at the same time employed mysele in the affair I went there upon.

They are Govern'd by the same Laws as wee in Boston, (or little differing,) thr'out this whole Colony of Connecticut, And much the same way of Church Government, and many of them good, Sociable people, and I hope Religious too: but a little too much Independant in their principalls, and, as I have been told, were formerly in their Zeal very Riggid in their Administrations towards such as their Lawes made Offenders, even to a harmless Kiss or Innocent merriment among Young people. Whipping being a frequent and counted an easy Punishment, about wch as other Crimes, the judges were absolute in their Sentantes. They told mee a pleasant story about a pair of justices in those parts, wch I may not omit the relation of.

A negro Slave belonging to a man in ye Town, stole a hogs head from his master, and gave or sold it to an Indian, native of the place. The Indian sold it in the neighbourhood, and so the theft was found out. Thereupon the Heathen was Seized, and carried to the justices House to be Examined. But his worship (it seems) was gone into the feild, with a Brother in office, to gather in his Pompions. Whither the malefactor is hurried, And Complaint made, and satisfaction in the name of justice demanded. Their Worshipps can't proceed in form without a Bench: whereupon they Order one to be Imedately erected, which, for want of fitter materials, they made with pompions—which being finished, down settts their Worshipps, and the Malefactor call'd, and by the Senior Justice Interrogated after the following manner. You Indian why did You steal from this man? You sho'dn't do so—it's a Grandy wicked thing to steal. Hol't Hol't, cryes justice Junr. Brother, You speak negro to him. I'le ask him. You sirrah, why did You steal this man's Hoggshhead? Hoggshhead? (replys the Indian,) me no stomany. No? says his Worship; and pulling off his hatt, Patted his own head with his hand, sais, Tatapa-You, Tatapa-you; all one this. Hoggshhead all one this. Hah! says Netop, now me stomany that. Whereupon the Company fell into a great fitt of Laughter, even to Roreing. Silence is comanded, but to no effect: for they continued perfectly Shouting. Nay, sais his worship, in an angry tone, if it be so, take mee off the Bench.

Their Diversions in this part of the Country are on Lecture days and Training days mostly: on the former there is Riding from town to town.

And on training dayes The Youth divert themselves by Shooting at the Target, as they call it, (but it very much resembles a pillory,) where hee that hitts neerest the white has some yards of Red Ribbin presented him, Wch being tied to his hattband, the two ends streeming down his back, he is Led away in Triumph, wth great applause, as the winners of the Olympiack Games. They generally marry very young: the males oftener as I am told under twentie than above; they generally make public wedings, and have a way something singular (as they say) in some of them, viz. Just before Joyning hands the Bridegroom quitts the place, who is soon followed by the Bridesmen, and as it were, dragg'd back to duty—being the reverse to ye former practice among us, to steal ma Pride.

There are great plenty of Oysters all along by the sea side, as farr as I Rode in the Collony, and those very good. And they Generally lived very well and comfortably in their famelies. But too Indulgent (especially ye farmers) to their slaves: sufering too great familiarity from them, permitting ym to sit at Table and eat with them, (as they say to save time,) and into the dish goes the black hoof as freely as the white hand. They told me that there was a farmer lived nere the Town where I lodgd who had some difference Wth his slave, concerning something the master had promised him and did not punctually perform; wch caused some hard words between them; But at length they put the matter to Arbitration and Bound themselves to stand to the award of such as they named—wch done, the Arbitrators Having heard the Allegations of both parties, Order the master to pay 40' to black face, and acknowledge his fault. And so the matter ended: the poor master very honestly standing to the award.

There are every where in the Towns as I passed, a Number of Indians the Natives of the Country, and are the most salvage of all the salvages of that kind that I had ever Seen: little or no care taken (as I heard upon enquiry) to make them otherwise. They have in some places Landes of their owne, and Govern'd by Law's of their own making; they marry many wives and at pleasure put them away, and on the ye least dislike or fickle humour, on either side, saying stand away to one another is a sufficient Divorce. And indeed those uncomely Stand sways are too much in Vougue among the English in this (Indulgent Colony) as their Records plentifully prove, and that on very trivial matters, of which some have been told me, but are not proper to be Related by a Female pen, tho some of that foolish sex have had too large a share in the story.

If the natives committ any crime on their own precincts among themselves, ye English takes no Cognezens of. But if on the English ground, they are punishable by our Laws. They mourn for their Dead by blacking their faces, and cutting their hair, after an Awkerd and frightfull manner; But can't bear You should mention the names of their dead Relations to them: they trade most for Rum, for wch theyd hazzard their very lives; and the English fit them Generally as well by seasoning it plentifully with water.

They give the title of merchant to every trader; who Rate their Goods according to the time and spetia they pay in: viz. Pay, mony, Pay as mony, and trusting. Pay is Grain, Pork, Beef, & c. at the prices sett by the General Court that Year; mony is pieces of Eight, Ryalls, or Boston or Bay shillings (as they call them,) or Good hard money, as sometimes silver coin is termed by them; also Wampom, vizt. Indian beads wch serves for change. Pay as mony is provisions, as aforesd one Third cheaper then as the Assembly or Gene' Court sets it; and Trust as they and the merch agree for time.

Now, when the buyer comes to ask for a commodity, sometimes before the merchant answers that he has it, he says, is Your pay redy? Perhaps the Chap Reply's Yes: what do You pay in? say's the merchant. The buyer having answered, then the price is set; as suppose he wants a sixpenny knife, in pay it is 12d-in pay as money eight pence, and hard money its own price, viz. 6d. It seems a very Intricate way of trade and what Lex Mercatoria had not thought of.

Being at a merchants house, in comes a tall country fellow, with his alfogeos full of Tobacco; for they seldom Loose their Cudd, but keep Chewing and Spitting as long as they'r eyes are open,—he advanc't to the midle of the Room, makes an Awkward Nodd, and spitting a Large deal of Aromatick Tincture, he gave a scrape with his shovel like shoo, leaving a small shovel full of dirt on the floor, made a full stop, Hugging his own pretty Body with his hands under his arms, Stood staring row'n'd him, like a Catt let out of a Baskett. At last, like the creature Balaam Rode on, he opened his mouth and said: have You any Ribinen for Hatbands to sell I pray? The Questions and Answers about the pay being past, the Ribin is bro't and opened. Bumpkin Simpser, cryes its confounded Gay I vow; and beckning to the door, in comes Jone Tawdry, dropping about 50 curtsees, and stands by him: hee shows her the Ribin. Law, You, sais shee, its right Gent, do You, take it, tis dreadfull pretty. Then she enquires, have You any hood silk I pray? wch being brought and bought, Have You any thred silk to sew it wth, says shee, wch being accomodated wth they Departed. They Generally stand after they come in a great while speechless, and sometimes dont say a word till they are askt what they want, which I Impute to the Awe they stand in of the merchants, who they are constantly almost Indebted too; and must take what they bring without Liberty to choose for themselves; but they serve them as well, making the merchants stay long enough for their pay.

We may Observe here the great necessity and bennifitt both of Education and Conversation; for these people have as Large a portion of mother witt, and sometimes a Larger, than those who have bin brought up in Citties; But for want of emprovements, Render themselves almost Ridiculos, as above. I should be glad if they would leave such follies, and am sure all that Love Clean Houses (at least) would be glad on't too.

They are generally very plain in their dress, throuout all ye Colony, as I saw, and follow one another in their modes; that You may know where they belong, especially the women, meet them where you will.

Their Cheif Red Letter day is St. Election, wch is annuaily Observed according to Charter, to choose their Govenr: a blessing they can never be thankfull enough for, as they will find, if ever it be their hard fortune to loose it. The present Govenor in Conecticott is the Honlbe John Winthrop Esq. A Gentleman of an Ancient and Honourable Family, whose Father was Govenor here sometime before, and his Grand father had bin Gov, of the Massachusetts. This gentleman is a very curteous and afable person, much Given to Hospitality, and has by his Good services Gain'd the affections of the people as much as any who had bin before him in that post.

Dec[ember] 6th. Being by this time well Recruited and rested after my Journy, my business lying unfinished by some concerns at New York depending thereupon, my Kinsman, Mr. Thomas Trowbridge of New Haven, must needs take a Journy there before it could be accomplished, I resolved to go there in company wth him, and a man of the town wch I engaged to wait on me there. Accordingly, Dec[ember] 6th we set out from New Haven, and about 1 t same morning came to Stratford ferry; wch crossing, about two miles on the other side Baited our horses and would have eat a morsell ourselves, But the Pumpkin and Indian mixt Bred had such an Aspect, and the Bare-legg'd Punch so awkerd or rather Awfull a sound, that we left both, and proceeded forward, and about seven at night come to Fairfield, where we met with good entertainment and Lodg'd; and early next morning set forward to Norowalk, from its halfe Indian name North-walk, when about 12 at noon we arrived, and Had a Dinner of Fryed Venison, very savoury. Landlady wanting some pepper in the seasoning, bid the Girl hand her the spice in the little Gay cupp on ye shelve. From hence we Hasted towards Rye, walking and Leading our Horses neer a mile together, up a prodigios high Hill; and so Riding till about nine at night, and there arrived and took up our Lodgings at an ordinary, wch a French family kept. Here being very hungry, I desired a fricasee, wch the Frenchman undertakeing, mannaged so contrary to my notion of Cookery, that I hastned to Bed superless; And being shewd the way up a pair of stairs wch had such a narrow passage that I had almost stopt by the Bulk of my Body; But arriving at my apartment found it to be a little Lento Chamber furnisht amongst other Rubbish with a High Bedd and a Low one, a Long Table, a Bench and a Bottomless chair,—Little Miss went to scratch up my Kennell wch Russelled as if shee'd bin in the Barn amongst the Husks, and supose such was the contents of the tickin nevertheless being exceeding weary, down I laid my poor Carkes (never more tired) and found my Covering as scanty as my Bed was hard. Annon I heard another Russelling noise in Y, Room—called to know the matter—Little miss said shee was making a bed for the men; who, when they were in Bed, complained their leggs lay out of it by reason of its shortness—my poor bones complained bitterly not being used to such Lodgings, and so did the man who was with us; and poor I made but one Crone, which was from the time I went to bed to the time I Ris, which was about three in the morning, Setting up by the Fire till Light, and having discharged our ordinary wch was as dear as if we had had far Better fare—wee took our leave of Monsier and about seven in the morn come to New Rochell a french town, where we had a good Breakfast. And in the strength of that about an how'r before sunsett got to York. Here I applyd myself to Mr. Burroughs, a merchant to whom I was recommended by my Kinsman Capt. Prout, and received great Civillities from him and his spouse, who were now both Deaf but very agreeable in their Conversation, Diverting me with pleasant stories of their knowledge in Brittan from whence they both come, one of which was above the rest very pleasant to me viz. my Lord Darcy had a very extravagant Brother who had mortgaged what Estate bee could not sell, and in good time dyed leaving only one son. Him his Lordship (having none of his own) took and made him Heir of his whole Estate, which he was to receive at the death of his Aunt. He and his Aunt in her widowhood held a right understanding and lived as become such Relations, shee being a discreat Gentlewoman and he an Ingenios Young man. One day Hee fell into some Company though far his inferiors, very freely told him of the Ill circumstances his fathers Estate lay under, and the many Debts he left unpaid to the wrong of poor people with whom he had dealt. The Young gentleman was put out of countenance—no way bee could think of to Redress himself—his whole dependance being on the Lady his Aunt, and how to speak to her he knew not—Hee went home, sat down to dinner and as usual sometimes with her when the Chaplain was absent, she desired him to say Grace, wch he did after this manner:

Pray God in Mercy take my Lady Darcy
Unto his Heavenly Throne,
That little John may live like a man,
And pay every man his own.

The prudent Lady took no present notice, But finishd dinner, after wch having sat and talk't awhile (as Customary) He Riss, took his Hat, and Going out she desired him to give her leave to speak to him in her Clossett, Where being come she desired to know why hee prayed for her Death in the manner aforesaid, and what part of her deportment towards him merritted such desires. Hee Reply'd, none at all, But he was under such disadvantages that

nothing but that could do him service, and told her how he had been affronted as above, and what Impressions it had made upon him. The Lady made him a gentle reprimand that he had not informed her after another manner, Bid him see what his father owed and he should have money to pay it to a penny, And always to lett her know his wants and he should have a redy supply. The Young Gentleman charm'd with his Aunts Discrete management, Beggd her pardon and accepted her kind offer and retrieved his fathers Estate, & c. and said Hee hoped his Aunt would never dye, for shee had done better by him than hee could have done for himself.—Mr. Burroughs went with me to Vendue where I bought about 100 Rheem of paper wch was retaken in a flyboat from Holland and sold very Reasonably here—some ten, some Eight shillings per Rheem by the Lott wch was ten Rheem in a Lott. And at the Vendue I made a great many acquaintances amongst the good women of the town, who curteosly invited me to their houses and generously entertained me.

The Cittie of New York is a pleasant, well compacted place, situated on a Commodius River wch is a fine harbour for shipping. The Buildings Brick Generally, very stately and high, though not altogether like ours in Boston. The Bricks in some of the Houses are of divers Coullers and laid in Checkers, being glazed look very agreeable. The inside of them are neat to admiration, the wooden work, for only the walls are plasterd, and the Sumers and Gist are plained and kept very white scowr'd as so is all the partitions if made of Bords. The fire places have no Jambs (as ours have) But the Backs run flush with the walls, and the Hearth is of Tyles and is as farr out into the Room at the Ends as before the fire, wch is Generally Five foot in the Low'r rooms, and the peice over where the mantle tree should be is made as ours with Joyners work, and as I suppose is fasten'd to iron rodds inside. The House where the Vendue was, had Chimney Corners like ours, and they and the hearths were laid wth the finest file that I ever see, and the stair cases laid all with white tile which is ever clean, and so are the walls of the Kitchen wch had a Brick floor. They were making Great preparations to Receive their Govenor, Lord Cornbury from the jerseys, and for that End raised the militia to Gard him on shore to the fort.

They are Generaly of the Church of England and have a New England Gentleman for their minister, and a very fine church set out with all Customary requistes. There are also a Dutch and Divers Conventicles as they call them, viz. Baptist, Quakers, & c. They are not strict in keeping the Sabbath as in Boston and other places where I had bin, But seem to deal with great exactness as farr as I see or Deall with. They are sociable to one another and Curteos and Civill to strangers and fare well in their houses. The English go very fasheonable in their dress. Dut the Dutch, especially the middling sort, differ from our women, in their habitt go loose, were French muches wch are like a Capp and a head band in one, leaving their ears bare, which are sett out Wth Jewells of a large size and many in number. And their fingers hoop't with Rings, some with large stones in them of many Coullers as were their pendants in their ears, which You should see very old women wear as well as Young.

They have Vendues very frequently and make their Earnings very well by them, for they treat with good Liquor Liberally, and the Customers Drink as Liberally and Generally pay for't as well, by paying for that which they Bidd up Briskly for, after the sack has gone plentifully about, tho' sometimes good penny worthy are got there. Their Diversions in the Winter is Riding Sleys about three or four Miles out of Town, where they have Houses of entertainment at a place called the Bowery, and some go to friends Houses who handsomely treat them. Mr. Burroughs cary'd his spouse and Daughter and myself out to one Madame Dowes, a Gentlewoman that lived at a farm House, who gave us a handsome Entertainment of five or six Dishes and choice Beer and metheglin, Cyder, & c. all which she said was the produce of her farm. I believe we mett 50 or 60 slays that day—they fly with great swiftness and some are so furious that they'le turn out of the path for none except a Loaden Cart. Nor do they spare for any diversion the place affords, and sociable to a degree, they'r Tables being as free to their Naybours as to themselves.

Having here transacted the affair I went upon and some other that fell in the way, after about a fortnight's stay there I left New-York with no Little regrett, and *Thursday, Dec[ember] 21*, set out for New Haven wth my Kinsman Trowbridge, and the man that waited on me about one afternoon, and about three come to half-way house about ten miles out of town, where we Baited and went forward, and about 5 come to Spiting Devil, Else Kings bridge, where they pay three pence for passing over with a horse, which the man that keeps the Gate set up at the end of the Bridge receives.

We hoped to reach the french town and Lodg there that night, but unhapily lost our way about four miles short, and being overtaken by a great storm of wind and snow which set full in our faces about dark, we were very uneasy. But meeting one Gardner who lived in a Cottage thereabout, offered us his fire to set by, having but one poor Bedd, and his wife not well, & c. or he would go to a Housr with us, where he thought we might be better accommodated—thither we went, But a surly old shoe Creature, not worthy the name of woman, who would hardly let us go into her Door, though the weather was so stormy none but shee would have turnd out a Dogg. But her son whose name was gallop, who lived just by Invited us to his house and shewed me two pair of stairs, viz. one up the loft and tother up the Bedd, wh was as hard as it was high, and warmed it with a hott stone at the feet. I lay very uncomfortably, insomuch that I was so very cold and sick I was forced to call them up to give me something to warm me. They had nothing but milk in the house, wch they Boild, and to make it better sweetened wth molasses, which I not knowing or thinking off till it was down and coming up agen woh it did in so plentifull a manner that my host was soon paid double for his portion, and that in specia. But I believe it did me service in Cleering my stomach.

So after this sick and weary night at East Chester, (a very miserable poor place,) the weather being now fair, *Friday the 22d Dec[ember]* we set out for New Rothell, where being come we had good Entertainment and Recruited ourselves very well. This is a very pretty place well compact, and good handsome houses, Clean, good and passable Rodes, and situated on a Navigable River, abundance of land well fined and Cleerd all along as wee passed, which caused in me a Love to the place, wch I could have been content to live in it. Here wee Ridd over a Bridge made of one entire stone of such a Breadth that a cart might pass with safety, and to spare—it lay over a passage cutt through a Rock to convey water to a mill not farr off. Here are three fine Taverns within call of each other, very good provision for Travailers.

Thence we travailed through Merrinak, a neet, though little place, wth a navigable River before it, one of the pleasantest I ever see—Here were good Buildings, Especialy one, a very fine seat, wch they told me was Col. Hethcoats, who I had heard was a very fine Gentleman.

From hence we come to Hors Neck, where wee Baited and they told me that one Church of England parson officiated in, all these three towns once every Sunday in turns throughout the Year; and that they all could but poorly maintaine him, which they grudg'd to do, being a poor and quarelsome crew as I understand by our Host; their Quarelling about their choice of Minister, they chose to have none—But caused the Government to send this Gentleman to them. Here wee took leave of York Government, and Descending the Mountainos passage that almost broke my heart in ascending before, we come to Stamford, a well compact Town, but miserable meeting house, wch we passed, and thro' many and great difficulties, as Bridges which were exceeding high and very tottering and of vast Length, steep and Rocky Hills and precipices, (Buggbears to a fearful female travailer.) About nine at night we come to

Norwalk, having crept over a timber of a Broken Bridge about thirty foot long, and perhaps fifty to ye water. I was exceeding tired and cold when we come to our Inn, and could get nothing there but poor entertainment, and the impertinant Bable of one of the worst of men, among many others of which our Host made one, who, had he bin one degree Impudenter, would have outdone his Grandfather. And this I think is the most perplexed night I have yet had.

From hence, *Saturday, Dec[ember] 23*, a very cold and windy day, after an Intolerable night's Lodging, wee hasted forward only observing in our way the Town to be situated on a Navigable river wth indifferent Buildings and people more refind than in some of the Country towns wee had passed, tho' vicious enough, the Church and Tavern being next neighbours. Having Ridd thro a difficult River wee come to Fairfield where wee Baited and were much refreshed as well with the Good things wch gratified our appetites as the time took to rest our wearied Limbs, woh Latter I employed in enquiring concerning the Town and manners of the people, & c. This is a considerable town, and filled as they say with wealthy people—have a spacious meeting house and good Buildings. But the Inhabitants are Litigious, nor do they well agree with their minister, who (they say) is a very worthy Gentleman. They have abundance of sheep, whose very Dung brings them great gain, with part of which they pay their Parsons sallery, And they Grudg that, preferring their Dung before their minister. They Lett out their sheep at so much as they agree upon for a night; the highest Bidder always caries them, And they will sufficiently Dung a Large quantity of Land before morning. But were once Bitt by a sharper who had them a night and sheared them all before morning—From hence we went to Stamford, the next Town, in which I observed but few houses, and those not very good ones. But the people that I conversed with were civill and good natured. Here we staid till late at night, being to cross a Dangerous River ferry, the River at that time full of Ice; but after about four hours waiting with great difficulty wee got over. My fears and fatigues prevented my here taking any particular observation. Being got to Milford, it being late in the night, I could go no further; my fellow travailer going forward, I was invited to Lodg at Mrs.—, a very kind and civill Gentlewoman, by whom I was handsomely and kindly entertained till the next night. The people here go very plain in their apparel (more plain than I had observed in the towns I had passed) and seem to be very grave and serious. They told me there was a singing Quaker lived there, or at least had a strong inclination to be so, His Spouse not at all affected that way. Some of the singing Crew come there one day to visit him, who being then abroad, they sat down (to the woman's no small vexation) Humming and singing and groneing after their conjuring way—Says the woman are you singing quakers? Yea says They—Then take my squalling Brat of a child here and sing to it, says she, for I have almost split my throat wth singing to him and cant get the Rogue to sleep. They took this as a great Indignity, and mediately departed. Shaking the dust from their Heels left the good woman and her Child among the number of the wicked.

This is a Seaport place and accomodated with a Good Harbour, But I had not opportunity to make particular observations because it was Sabbath day—This Evening.

December 24. I set out with the Gentlewomans son who she very civilly offered to go with me when she see no parswasions would cause me to stay which she pressingly desired, and crossing a ferry having but nine miles to New Haven, in a short time arrived there and was Kindly received and well accommodated amongst my Friends and Relations.

The Government of Connecticut Collony begins westward towards York at Stanford (as I am told) and so runs Eastward towards Boston (I mean in my range, because I dont intend to extend my description beyond my own travails) and ends that way at Stonington—And has a great many Large towns lying more northerly. It is a plentiful Country for provisions of all sorts and its Generally Healthy. No one that can and will be dilligent in this place need fear poverty nor the want of food and Rayment.

January 6th. Being now well Recruited and fitt for business I discoursed the persons I was concerned with, that we might finnish in order to my return to Boston. They delays as they had hitherto done hoping to tire my Patience. But I was resolute to stay and see an End of the matter let it be never so much to my disadvantage.

So *January 9th* they come again and promise the Wednesday following to go through with the distribution of the Estate which they delayed till Thursday and then come with new amusements. But at length by the mediation of that holy good Gentleman, the Rev. Mr. James Pierpont, the minister of New Haven, and with the advice and assistance of other our Good friends we come to an accommodation and distribution, which having finished though not till February, the man that waited on me to York taking the charge of me I sit out for Boston. We went from New Haven upon the ice (the ferry being not passable thereby) and the Rev. Mr. Pierpont wch Madam Prout Cuzin Trowbridge and (livers others were taking leave wee went onward without any thing Remarkabl till wee come to New London and Lodged again at Mr. Saltonstalls—and here I dismist my Guide, and my Generos entertainer provided me Mr. Samuel Rogers of that place to go home with me—I stayed a day here Longer than I intended by the Commands of the Honh'e Govenor Winthrop to stay and take a supper with him whose wonderful civility I may not omitt. The next morning I Crossed ye Ferry to Groton, having had the Honor of the Company, of Madam Livingston (who is the Govenors Daughter) and Mary Christophers and divers others to the boat—And that night Losga at Stonington and had Rost Beef and pumpkin sause for supper. The next night at Haven's and had Rost fowle, and the next day wee come to a river which by Reason of Ye Freshetts coming down was swell'a so high wee feara it impassable and the rapid stream was very terryfying—However we must over and that in a small Cannoo. Mr. Rogers assuring me of his good Conduct, I after a stay of near an how'r on the shore for consultation went into the Cannoo, and Mr. Rogers paddled about 100 yards up the Creek by the shore side, turned into the swift stream and dexterously steering her in a moment wee come to the other side as swiftly passing as an arrow shott out of the Bow by a strong arm. I staid on ye shore till Hee returned to fetch our horses, which he caused to swim over himself bringing the furniture in the Cannoo. But it is past my skill to express the Exceeding fright all their transactions formed in me.

Wee were now in the colony of the Massachusetts and taking Lodgings at the first Inn we come too had a pretty difficult passage the next day which was the *second of March* by reason of the sloughy ways then thawed by the Sunn. Here I mett Capt. John Richards of Boston who was going home, So being very glad of his Company we Rode something harder than hitherto, and missing my way in going up a very steep Hill, my horse dropt down under me as Dead; this new surprize no little hurt me meeting it just at the Entrance into Dedham from whence we intended to reach home that night. But was now obliged to gett another Hors there and leave my own, resolving for Boston that night if possible. But in going over the Causeway at Dedham the Bridge being overflowed by the high waters comming down I very narrowly escaped falling over into the river Hors and all wch twas almost a miracle I did not—now it grew late in the afternoon and the people having very much discouraged us about the sloughy way wch they said wee should find very difficult and hazardous it so wrought on mee being tired and dispirited and disapointed of my desires of going home that I agreed to Lodg there that night wch wee did at the house of one Draper, and the next day being *March 3d* wee got safe home to Boston, where I found my aged and tender mother and my Dear and

only Child in good health with open arms redy to receive me, and my Kind relations and friends flocking in to welcome mee and hear the story of my transactions and travails I having this day bin five months from home and now I cannot fully express my joy and Satisfaction. But desire sincearly to adore my Great Benefactor for thus graciously carying forth and returning in safety his unworthy handmaid.

The French and the Fur Trade (1724)

Cadwallader Colden, then the surveyor general in the province of New York, reports to Governor Burnet on what he sees as French encroachment on New York safety and its trade. He monitors the activities of the French both in the New York area and along the Mississippi, observing their forts, their priests' conversions of native peoples, and their use of inland travel routes used by the natives. Colden advocates extending the frontiers of the province to check the French presence and safeguard commerce with the natives.

A Memorial concerning the Fur Trade of the province of New-York. Presented to his Excellency William Burnet, Esq. Captain-General and Governor, &c. by Cadwallader Colden, Surveyor-General of the said province, the 10th of December, 1724.

It has of late been generally believed, that the inhabitants of the province of New-York are so advantageously situated, with respect to the Indian trade, and enjoy so many advantages as to trade in general, that it is in their power not only to rival the French of Canada, who have almost entirely engrossed the Fur Trade of America, but that it is impossible for the French to carry on that trade in competition with the people of this province. The inquiring into the truth of this proposition, may not only be of some consequence, as to the riches and honour of the British nation (for it is well known how valuable the fur trade of America is) but likewise as to the safety of all the British colonies in North America. New France, as the French now claim, extends from the mouth of the river Mississippi, to the mouth of the river St. Lawrence, by which the French plainly show their intention of enclosing the British settlements, and cutting us off from all commerce with the numerous nations of Indians, that are every where settled over the vast continent of North America. The English in America have too good reason to apprehend such a design, when they see the French king's geographer publish a map, by which he has set bounds to the British empire in America, and has taken in many of the English settlements both in South Carolina and New-York, within these boundaries of New France. And the good services they intend us with the Indians, but too plainly appears at this day, by the Indian war now carried on against New-England.

I have therefore for some time past, endeavoured to inform myself from the writings of the French, and from others who have travelled in Canada, or among the Indians, how far the people of this province may carry on the Indian trade with more advantage than the French can; or what disadvantages they labour under more than the French do. As all endeavours for the good of one's country are excusable, I do not doubt but my intention in this will be acceptable to your excellency, though I be not capable of treating the subject as it deserves.

I shall begin with Canada, and consider what advantages they have either by their situation or otherwise. Canada is situated upon the river of St. Lawrence, by which the five great lakes (which may properly be called the five inland seas of North America) empty themselves into the ocean. The mouth of this great river is in the latitude of 50°, over against the body of Newfoundland. It rises from the Cataracui, now Lake Ontario, the easternmost of the five great lakes, about the latitude of 44°, and runs from thence about north-east to the ocean, and is about nine hundred miles in length, from that lake to the ocean. The five great lakes which communicate with each other, and with this river, extend about one thousand miles westward further into the continent. So far the French have already discovered, and their discoveries make it probable, that an inland passage may be found to the South Sea, by the rivers which run into these lakes, and rivers which run into the South Sea.

The method of carrying goods upon the rivers of North America, into all the small branches and over land, from the branches of one river to the branches of another, was learned from the Indians, and it is the only method practicable through such large forests and deserts as the traders pass through, in carrying from one nation to another—it is this; the Indians make a long narrow boat, made of the bark of the birch tree, the parts of which they join very neatly. One of these canoes that can carry a dozen men, can itself be easily carried on two men's shoulders; so that when they have gone as far by water as they can, which is further than is easily to be imagined, because their loaded canoes don't sink six inches into the water, they unload their canoes, and carry both goods and canoes upon their shoulders over land, into the nearest branch of the river they intend to follow. Thus the French have an easy communication with all the countries bordering upon the river of St. Lawrence, and its branches, with all the countries bordering upon these inland seas, and the rivers which empty themselves into these seas, and can thereby carry their burdens of merchandise through all these large countries, which could not by any other means than water-carriage be carried through so vast a tract of land.

This, however, but half finishes the view the French have as to their commerce in North America. Many of the branches of the river Mississippi come so near to the branches of several of the rivers which empty themselves into the great lakes, that in several places there is but a short land-carriage from the one to the other. As soon as they have got into the River Mississippi, they open to themselves as large a field for traffic in the southern parts of North America, as was before mentioned with respect to the northern parts. If one considers the length of this river and its numerous branches, he must say, that by means of this river and the lakes, there is opened to his view such a scene of inland navigation as cannot be paralleled in any other part of the world.

The French have, with much industry, settled small colonies, and built stockaded forts at all the considerable passes between the lakes, except between Cataracui Lake, called by the French Ontario, and Lake Erie, one of our Five Nations of Indians, whom we call Senecas, and the French Sonontouans, having hitherto refused them leave to erect any buildings there.

The French have been indefatigable in making discoveries, and carrying on their commerce with nations, of whom the English know nothing but what they

see in the French maps and books. The barrenness of the soil, and the coldness of the climate of Canada, obliges the greatest number of the inhabitants to seek their living by travelling among the Indians, or by trading with those who do travel. The Governor, and other officers, have but a scanty allowance from the king, and could not subsist were it not by the perquisites they have from this trade; neither could their priests find any means to satisfy their ambition and luxury without it. So that all heads and hands are employed to advance it, and the men of best parts think it the surest way to advance themselves by travelling among the Indians, and learning their languages; even the bigotry and enthusiasm of some hot heads, has not been a little useful in advancing this commerce; for that government having prudently turned the edge of the zeal of such hot spirits upon converting the Indians, many of them have spent their lives under the greatest hardships, in endeavouring to gain the Indians to their religion, and to love the French nation, while, at the same time, they are no less industrious to represent the English as the enemies of mankind. So that the whole policy of that government, both civil and religious, is admirably turned to the general advancement of this trade. Indeed the art and industry of the French, especially that of their religious missions, has so far prevailed upon all the Indians in North America, that they are every where directed by French councils. Even our own Five Nations, the Iroquois, who formerly were mortal enemies of the French, and have always lived in the strictest amity with the English, have of late, by the practices of the French priests, been so far gained, that several of the Mohawks who live nearest the English, have left their habitations, and are gone to settle near Montreal in Canada; and all the rest discover a dread of the French power. That much of this is truly owing to the priests, appears from many of the Sachems of the Iroquois wearing crucifixes when they come to Albany. And those Mohawk Indians that are gone to Canada, are now commonly known, both to the French and English, by the name of the Praying Indians, it being customary for them to go through the streets of Montreal with their beads, praying and begging alms.

But notwithstanding all these advantages, the French labour under difficulties that no art or industry can remove. The mouth of the river St. Lawrence, and more especially the bay of St. Lawrence, lies so far north, and is thereby so often subject to tempestuous weather and thick fogs, that the navigation there is very dangerous, and never attempted but during the summer months. The wideness of this bay, together with the many strong currents that run in it, the many shelves and sunken rocks that are every where spread over both the bay and river, and the want of places for anchoring in the bay, all increase the danger of this navigation; so that a voyage to Canada is justly esteemed much more dangerous than to any other part of America. The many shipwrecks that happen in this navigation, are but too evident proofs of the truth of this, particularly the miscarriage of the last expedition against Canada. The channel is so difficult, and the tides so strong, that after their shipping get into the river, they never attempt to sail in the night, though the wind be fair, and the weather good. These difficulties are so considerable, that the French never attempt above one voyage a year to Europe or the West Indies, though it be really nearer Europe than any of the English colonies, where the shipping that constantly use the trade, always make two voyages in the year.

The navigation between Quebec and Montreal is likewise very dangerous and difficult. The tide rises about eighteen or twenty feet at Quebec, which occasions so strong a stream, that a boat of six oars cannot make way against it; the river in many places very wide, and the channel at the same time narrow and crooked; there are many shelves and sunken rocks, so that the best pilots have been deceived; for which reasons vessels that carry goods to Montreal, are always obliged to anchor before night, though both wind and tide be fair. The flood goes no further than Trois Rivières, half way to Montreal, and about ninety miles from Quebec.

After they pass this place they have a strong stream always against them, which requires a fair wind and a strong gale to carry the vessels against the stream. And they are obliged in this part of the river, as well as under the Trois Rivières, to come to anchor at night though the wind be good. These difficulties make the common passages take up three or four weeks, and sometimes six weeks; though if they have the chance of a wind to continue so long, they may run it in five or six days. After they pass Montreal, they have a strong stream against them till they come near the Lakes; so that in all that, which is about one hundred and fifty miles in length, they force their canoes forward with setting poles, or drag them with ropes along shore; and at five or six different places in that way the river falls over rocks with such force, that they are obliged to unload their canoes, and carry them upon their shoulders. They never make this voyage from Montreal to Lake Ontario in less than twenty days, and frequently, twice that time is necessary.

Now we are come so far as the lake, my design leads me no further, for at this lake all the far Indians that go to Canada must pass by our traders. And from thence the road to the Indian countries is the same from Albany as it is from Montreal.

Besides these difficulties in the transportation, the French labour under greater in purchasing of the principal goods proper for the Indian market; for the most considerable and most valuable part of their cargo consists in strouds, duffels, blankets, and other woollens, which are bought at a much cheaper rate in England than in France. The strouds, which the Indians value more than any other clothing, are only made in England, and must be transported into France before they can be carried to Canada. Rum is another considerable branch of the Indian trade with the French have not, by reason they have no commodities in Canada fit for the West India market. This they supply with brandy, at a much dearer rate than rum can be purchased at New-York, though of no more value to with the Indians. Generally, all the goods used in the Indian trade, except gunpowder, and a few trinkets, are sold at Montreal for twice their value at Albany. To this likewise must be added, the necessity they are under of laying the whole charge of supporting their government on the Indian trade. I am not particularly informed of their duties or imposts, but I am well assured, that they commonly give six or seven hundred livres for a licence for one canoe, in proportion to her largeness, to go with her loading into the Indian country to trade.

I shall next consider the advantages the inhabitants of New-York have in carrying on this trade. In the first place, the ships that constantly use the trade to England, perform their voyage to and from London twice every year; and those that go to Bristol, the port from whence the greatest part of the goods for the Indian trade are exported, frequently return in four months. These goods are bought much cheaper in England than in France: they are transported in less time, with less charge, and much less risk, as appears by the premium for insurance between London and New-York, being only two per cent. Goods are easily carried from New-York to Albany up the Hudson River, the distance being only 140 miles, the river very straight all the way, and bold, and very free from sand banks, as well as rocks; so that the vessels always sail as well by night as by day, and have the advantage of the tide upwards as well as downwards, the flood flowing above Albany. It may therefore be safely concluded, that all sorts of goods can be carried to Albany at a cheaper rate than they can to Quebec, which is also three times further from the Indian country than Albany is. To put the truth of this out of all dispute, I need only observe what is well known both at New-York and Albany, viz. That almost all the strouds carried by the French into the Indian countries, as well as large quantities of other goods, for the use of the French themselves, are carried from Albany to Montreal. There has been an account kept of nine hundred pieces of strouds transported thither in one year, besides other commodities of very considerable value. The distance between Albany and Montreal, is about two hundred miles, all by water, except twelve miles between Hudson River and Wood Creek, where they carry their bark canoes over land, and about sixteen miles between Chambly and La Prairie, over against Montreal. And though the passage be so short and easy, these goods are

generally sold at double their value in Albany.

But as this path hath been thought extremely prejudicial to the interests of this colony, I shall leave it and go on to another that leads directly from Albany into the Cataracui or Ontario Lake, without going near any of the French settlements.

From Albany the Indian traders commonly carry their goods sixteen miles over land, to the Mohawk River at Schenectady, the charge of which carriage is nine shillings New-York money, or five shillings sterling each waggon-load. From Schenectady they carry them in canoes up the Mohawk River, to the carrying-place between the Mohawk River and the river which runs into the Oneida Lake; which carrying-place between is only three miles long, except in very dry weather, when they are obliged to carry them two miles further. From thence they go with the current down the Onondaga River to Lake Ontario. The distance between Albany and Lake Ontario this way, is nearly the same with that between Albany and Montreal; and likewise with that between Montreal and Lake Ontario, and the passage much easier than the last, because the stream of the Mohawk River is not near so strong as the river St. Lawrence between the Lake and Montreal, and there is no fall in the river save one short one; whereas there are, as I have said, at least five in the river St. Lawrence, where the canoes must be unloaded. Therefore it plainly follows, that the Indian goods may be carried at as cheap a rate from Albany to Lake Ontario, as from Albany to Montreal. So that the people of Albany plainly save all the charge of carrying goods two hundred miles from Montreal to that part of the Ontario Lake, which the French have to carry before they bring them to the same place from Montreal, besides the advantage which the English have in the price of their goods.

I have said, that when we are in Lake Ontario, we are upon the level with the French, because here we can meet with all the Indians that design to go to Montreal. But besides this passage by the lakes, there is a river which comes from the country of the Senecas, and falls into the Onondaga River, by which we have an easy carriage into that country, without going near Lake Ontario. The head of this river goes near to Lake Erie, and probably may give a very near passage into that Lake, much more advantageous than the way the French are obliged to take by the great fall of Niagara, because narrow rivers are much safer for canoes than lakes, where they are obliged to go ashore if there be any wind upon the water. But as this passage depends upon a further discovery, I shall say nothing more of it at this time.

Whoever then considers these advantages New-York has of Canada, in the first buying of their goods, and in the safe, speedy, and cheap transportation of them from Britain to the Lakes, free of all manner of duty or imposts, will readily agree with me, that the traders of New-York may sell their goods in the Indian countries at half the price the people of Canada can, and reap twice the profit they do. This will admit of no dispute with those that know that strouds, the staple Indian commodity, this year are sold for ten pounds a piece at Albany, and at Montreal for twenty-five pounds, notwithstanding the great quantity of strouds said to be brought directly into Quebec from France, and the great quantities that have been clandestinely carried from Albany. It cannot therefore be denied that it is only necessary for the traders of New-York to apply themselves heartily to this trade, in order to bring it wholly into their own hands; for in every thing besides diligence, industry, and enduring fatigues, the English have much the advantage of the French. And all the Indians will certainly buy, where they can at the cheapest rate.

It must naturally be objected, that if these things are true, how is it possible that the traders of New-York should neglect so considerable and beneficial trade for so long time?

In answering this objection, I shall show the difficulties New-York has laboured under, by giving a short history of the country, so far as it relates to this trade. Which method, I think, can be liable to the least objection, and put the whole in the truest light.

When this country (the province of New-York) came first under the crown of Great Britain, our Five Nations of Indians were mortal enemies of the French at Canada, and were in a continual war with them, and all the nations of Indians around the lakes; so that then it was not safe for the English to travel further than the countries of the Five Nations; nor would our Indians permit the far Indians, with whom they had constant war, to pass through their countries to Albany. Besides, the Five Nations of Indians were at that time so numerous, consisting of ten times the number of fighting men they now do, that the trade with them alone was very considerable for so young and small a colony. In the latter end of King Charles's reign, when the duke of York and popish councils prevailed, the Governor of New-York, who was likewise a papist, had orders to use all his endeavours to make up a peace between our nations (the Iroquois) and the French; and that he should persuade the Five Nations to admit French priests among them, in order to civilize them. The consequence of which was, that the French thereby obtained a free commerce upon the lakes, and obtained leave to build Cataraqui Fort upon the north side of Lake Ontario, and have two vessels of force upon the same lake. From this time, during all king James's reign, the French, whenever they had any differences with our Five Nations, threatened that the English of New-York would join with them, and destroy the Five Nations; by which, and the practices of the French priests, our Five Nations became very much alienated in their affections from the English, and looked upon them as a people depending upon the French. The consequences of this appeared so dangerous to Colonel Dungan, the Governor of New-York, though, as I have said, a papist, that he again and again complained to his master of the ill offices the French priests did the English among our nations. When the English had thus procured a peace for the French, they thought they might justly reap some advantages from it; and it's hardly to be doubted but that they had promises of that kind. They were therefore encouraged to send forty men, with great quantities of goods, into the lakes, under the command of Major Gregory, to trade with the far nations. At this time, Mr. Denonville, Governor of Canada, was gathering together all the force of Canada, and of the Indians, enemies of the Five Nations, in order to surprise the Five Nations and destroy them, at the time they thought themselves secure by the peace so lately made. Major Gregory and his company, were met by a French officer on Lake Erie, coming with a great number of men to the general rendezvous of the French, and he, with all the English, were made prisoners. They were used with such severity as has never been practised between Christian nations in open war, though the two crowns at that time were not only at peace, but under the strictest ties of mutual friendship; for the French used these people as slaves in building Cataraqui fort, and a poor Frenchman that had conducted them, was publicly shot to death, as if he had brought an enemy into their country. Such were their apprehensions then of the English getting any footing among the Indians.

The French Governor surprised a village of the Five Nations, who, on the French faith, lived in great security but seven or eight leagues from the French fort, and sent these miserable people to the galleys in France. He afterwards fell upon the Senecas, and burnt their villages, but without any advantage to the French, they having lost more men than the Indians did. This renewed the war with greater fury than ever, between the French and our Indians. For some time afterwards our Indians, in a great body, fell upon the island of Montreal, while Mr. Denonville was in the town. They burnt and destroyed all the villages and houses around Montreal, and killed some hundreds of men, women, and children. Afterwards they came into the open fields before Montreal, and there defied the French Governor, who did not think it proper to fight them. And when they had done all the mischief they could, they retired without any loss.

About this time the revolution happened in Great Britain, which was succeeded by a war between Great Britain and France. In February 1689–90. A party of three hundred men, consisting of equal numbers of French and Indians, surprised Schenectady in the night-time, when the poor people were in their beds, in the greatest security, where they barbarously murdered sixty-three men, women, and children, in cold blood, laid the village in ashes, and then retired, without reaping any other advantage besides this cruel revenge on innocent people, for the mischief our Indians had done them. This raised a cruel war between the two colonies, in which there was much mischief done, and blood shed, without any advantage to either side.

In time of this war, the most Christian king's Governor of Canada was so much provoked, that he thought fit to follow the example of our barbarous Indians, and burn his Indian prisoners alive in the most cruel manner, in sight of all the inhabitants of Quebec, and to deliver up the English prisoners to the French Indians, who indeed had more mercy, for they killed none of them.

King William's peace put an end to this war; but the peace lasted so short a while, that the people of this province hardly had time to re-settle their farms on the frontiers, which they had deserted in the time of the war, much less to adventure trading in the Indian countries, so lately the scene of so much cruelty. But both colonies having now an abhorrence of the cruelties of the last war, agreed on a kind of neutrality for the Indians, during Queen Anne's war, in which time we lost much ground with our own Indians. For the French having learned, by dear experience, that it was not possible for them to conquer our Five Indian Nations, resolved to try all means to gain their affections, and in this art the French are always more successful than in that of war; and the English failing in two ill-concerted expeditions against Canada, the Indians lost much of the opinion they had of the English power and valour.

In time of this last war, the clandestine trade to Montreal began to be carried on by Indians from Albany to Montreal. This gave rise to the Kahnuaqa, or Praying Indians, who are entirely made up of deserters from the Mohawks and river Indians, and were either enticed thither by the French priests, or by our merchants, in order to carry goods from Albany to Montreal, or run away for some mischief done here. These Indians now consist of about eighty fighting men, and live about four leagues above Montreal. They neither plant nor hunt, but depend chiefly upon this private trade for their subsistence. These Indians, in time of war, gave the French intelligence of all designs here against them. By them likewise the French engaged our Five Nations in a war with the Indians, friends of Virginia, and from them we might expect the greatest mischief in time of war, seeing every part of the province is as well known to them as to any of the inhabitants. But if this trade was entirely at an end, we have reason to believe, that these Indians would return to their own tribes, for they then could not long subsist where they now are.

As soon as the peace was proclaimed, an open trade with Montreal was carried on with such earnestness, that Montreal was filled with Indian goods, and Albany exhausted; by which means Montreal became the principal, if not the only Indian market, and the Indians depended entirely on the French for what they wanted.

Our merchants were fond of the Canada trade, because they sold large quantities of goods without any trouble, the French taking them from their doors; whereas the trade with the Indians is carried on with a great deal of toil and fatigue; and as to the interest of the country, they either never thought any thing about it, or if they did, had no regard to it.

Now I have brought this account to the time your excellency arrived; what has happened since, your excellency knows better than I can by any means inform you. From the whole, it seems plain that any difficulties and disadvantages this province has been under, have only proceeded from the wars, which have continued since the first settling of the province, to the beginning of the last general peace. But now, that not only this province, but likewise our Six Nations of Indians are at peace, and in amity both with the French and all the Indian nations with whom we can have any commerce, these difficulties are all removed, and we now enjoy the most favourable time, that at any time can be hoped for, in order to extend the British commerce in North America, while the French not only labour under the difficulties which I have shown to be inseparable from the situation of their colony, but likewise under another disadvantage, not before taken notice of, by the fur trade of Canada being restrained to one Company. This company is obliged to pay heavy duties in France upon the importation of beaver or any other fur; for which reason they always fix a price upon beaver and their other furs in Canada; and the Indian traders of Canada being restrained from selling to any but the company's agents there, they cannot raise the price of Indian goods as the price of European rise, or as their profit on the goods they sell to the Indians is lessened.

The merchants of New-York allow our Indian traders double the price for beaver, that the French company allow their Indian traders, the price established by the company for beaver in Canada, being two livres, or eighteen pence sterling the pound weight; and the current price of beaver in New-York being five shillings New-York money, or three shillings sterling the pound weight. Therefore it plainly follows, that our Indian traders could undersell the French traders, though they were to give as great a price for European goods as the French do, and did transport them at as great charge, because of the double price they have for their furs in New-York.

But as our Indian traders not only have a double price for their Indian goods, but likewise buy the goods they sell to the Indians, at half the price the French Indian traders do, the French traders must be ruined by carrying on this trade, in competition with the English of New-York. And the French Indian traders had been ruined before now, if they had not found means to carry their beaver to Albany, where they got double the price they must have sold for in Canada.

It may be objected against this argument, that the Canada Company as soon as they find that the traders cannot sell at their established price, will allow a greater price. But if we consider the duties the French company is obliged to pay to the king, they cannot allow so great a price as the English can at New-York. And if it should be insisted, that the French company may obtain a remission of those, yet if the clandestine trade with Albany be entirely stopt, the French traders will be ruined before such remission can be obtained, and their trade will be at an end.

My inclination led me to show what advantages not only the Indian trade would reap by extending our frontiers as far as the lakes, but likewise the British trade in some other branches, which the parliament of Great Britain seem to have much at heart, viz. naval stores; for the soil on both sides of the Mohawk River being as rich as it is possible, I believe, for any land to be, will be found the most proper for raising of hemp of any part of America, and the whole country round it being full of the largest pines, the royal navy is as likely to be well provided with masts there, and at as cheap a rate as any where else. But I have already too far presumed on your excellency's patience.

CADWALLADER COLDEN

A Modest Enquiry into the Nature and Necessity of a Paper Currency (1729)

Since the supply of any official currency was limited in the colonies, a number of items served as money: wampum, furs, cash crops (tobacco, rice, indigo), and various foreign coinages. Some colonies issued their own paper money, but determining its value was problematic. To counteract depreciation in its value, Benjamin Franklin proposed that printed paper money be tied to land secured by mortgages. Franklin favored the circulation of money through public banks such as the Pennsylvania Land Bank, and he received a contract for the printing of the bank's third issue of notes in 1729.

THERE is no Science, the Study of which is more useful and commendable than the Knowledge of the true Interest of one's Country; and perhaps there is no Kind of Learning more abstruse and intricate, more difficult to acquire in any Degree of Perfection than This, and therefore none more generally neglected. Hence it is, that we every Day find Men in Conversation contending warmly on some Point in Politicks, which, altho' it may nearly concern them both, neither of them understand any more than they do each other.

Thus much by way of Apology for this present Enquiry into the Nature and Necessity of a Paper Currency. And if any Thing I shall say, may be a Means of fixing a Subject that is now the chief Concern of my Countrymen, in a clearer Light, I shall have the Satisfaction of thinking my Time and Pains well employed.

To proceed, then,

There is a certain proportionate Quantity of Money requisite to carry on the Trade of a Country freely and currently; More than which would be of no Advantage in Trade, and Less, if much less, exceedingly detrimental to it.

This leads us to the following general Considerations.

FIRST, A great Want of Money in any Trading Country, occasions Interest to be at a very high Rate. And here it may be observed, that it is impossible by any Laws to restrain Men from giving and receiving exorbitant Interest, where Money is suitably scarce: For he that wants Money will find out Ways to give 10 per Cent. when he cannot have it for less, altho' the Law forbids to take more than 6 per Cent. Now the Interest of Money being high is prejudicial to a Country several Ways: It makes Land bear a low Price, because few Men will lay out their Money in Land, when they can make a much greater Profit by lending it out upon Interest: And much less will Men be inclined to venture their Money at Sea, when they can, without Risque or Hazard, have a great and certain Profit by keeping it at home; thus Trade is discouraged. And if in two Neighbouring Countries the Traders of one, by Reason of a greater Plenty of Money, can borrow it to trade with at a lower Rate than the Traders of the other, they will infallibly have the Advantage, and get the greatest Part of that Trade into their own Hands; For he that trades with Money he hath borrowed at 8 or 10 per Cent. cannot hold Market with him that borrows his Money at 6 or 4. On the contrary, A plentiful Currency will occasion Interest to be low: And this will be an Inducement to many to lay out their Money in Lands, rather than put it out to Use, by which means Land will begin to rise in Value and bear a better Price: And at the same Time it will tend to enliven Trade exceedingly, because People will find more Profit in employing their Money that Way than in Usury; and many that understand Business very well, but have not a Stock sufficient of their own, will be encouraged to borrow Money; to trade with, when they can have it at a moderate Interest.

SECONDLY, Want of Money in a Country reduces the Price of that Part of its Produce which is used in Trade: Because Trade being discouraged by it as above, there is a much less Demand for that Produce. And this is another Reason why Land in such a Case will be low, especially where the Staple Commodity of the Country is the immediate Produce of the Land, because that Produce being low, fewer People find an Advantage in Husbandry, or the Improvement of Land. On the contrary, A Plentiful Currency will occasion the Trading Produce to bear a good Price: Because Trade being encouraged and advanced by it, there will be a much greater Demand for that Produce; which will be a great Encouragement of Husbandry, who probably might otherwise have Sought some more profitable Employment.

As we have already experienced how much the Increase of our Currency by what Paper Money has been made, has encouraged our Trade; particularly to instance only in one Article, Ship-Building; it may not be amiss to observe under this Head, what a great Advantage it must be to us as a Trading Country, that has Workmen and all the Materials proper for that Business within itself, to have Ship-Building as much as possible advanced: For every Ship that is built here for the English Merchants, gains the Province her clear Value in Gold and Silver, which must otherwise have been sent Home for Returns in her Stead; and likewise, every Ship built in and belonging to the Province, not only saves the Province her first Cost, but all the Freight, Wages and Provisions she ever makes or requires as long as she lasts; provided Care is taken to make This her Pay Port, and that she always takes Provisions with her for the whole Voyage, which may easily be done. And how considerable an Article this is yearly in our Favour, every one, the least acquainted with mercantile Affairs, must needs be sensible; for if we could not Build our selves, we must either purchase so many Vessels as we want from other Countries, or else Hire them to carry our Produce to Market, which would be more expensive than Purchasing, and on many other Accounts exceedingly to our Loss. Now as Trade in general will decline where there is not a plentiful Currency, so Ship-Building must certainly of Consequence decline where Trade is declining.

THIRDLY, Want of Money in a Country discourages Labouring and Handicrafts Men (which are the chief Strength and Support of a People) from coming to settle in it, and induces many that were settled to leave the Country, and seek Entertainment and Employment in other Places, where they can be better paid. For what can be more disheartning to an industrious labouring Man, than this, that after he hath earned his Bread with the Sweat of his Brows, he must spend as much Time, and have near as much Fatigue in getting it, as he had to earn it. And nothing makes more bad Paymasters than a general Scarcity of Money. And here again is a Third Reason for Land's bearing a low Price in such a Country, because Land always increases in Value

in Proportion with the Increase of the People settling on it, there being so many more Buyers; and its Value will infallibly be diminished, if the Number of its Inhabitants diminish. On the contrary, A Plentiful Currency will encourage great Numbers of Labouring and Handicrafts Men to come and Settle in the Country, by the same Reason that a Want of it will discourage and drive them out. Now the more Inhabitants, the greater Demand for Land (as is said above) upon which it must necessarily rise in Value, and bear a better Price. The same may be said of the Value of House-Rent, which will be advanced for the same Reasons; and by the Increase of Trade and Riches People will be enabled to pay greater Rents. Now the Value of House-Rent rising, and Interest becoming low, many that in a Scarcity of Money practised Usury, will probably be more inclined to Building; which will likewise sensibly enliven Business in any Place; it being an Advantage not only to Brickmakers, Bricklayers, Masons, Carpenters, Joiners, Glaziers, and several other Trades immediately employed by Building, but likewise to Farmers, Brewers, Bakers, Taylors, Shoemakers, Shop-keepers, and in short to every one that they lay their Money out with.

FOURTHLY, Want of Money in such a Country as ours, occasions a greater Consumption of English and European Goods, in Proportion to the Number of the People, than there would otherwise be. Because Merchants and Traders by whom abundance of Artificers and labouring Men are employed, finding their other Affairs require what Money they can get into their hands, oblige those who work for them to take one half, or perhaps two thirds Goods in Pay. By this Means a greater Quantity of Goods are disposed of, and to a greater Value; because Working Men and their Families are thereby induced to be more profuse and extravagant in fine Apparel and the like, than they would if they were obliged to pay ready Money for such Things after they had earn'd and received it, or if such Goods were not imposed upon them, of which they can make no other Use: For such People cannot send the Goods they are paid with to a Foreign Market, without losing considerably by having them sold for less than they stand 'em in here; neither can they easily dispose of them at Home, because their Neighbours are generally supplied in the same Manner; But how unreasonable would it be, if some of those very Men who have been a Means of thus forcing People into unnecessary Expence, should be the first and most earnest in accusing them of Pride and Prodigality. Now tho' this extraordinary Consumption of Foreign Commodities may be a Profit to particular Men, yet the Country in general grows poorer by it apace.—On the contrary, As A plentiful Currency will occasion a less Consumption of European Goods, in Proportion to the Number of the People, so it will be a means of making the Balance of our Trade more equal than it now is, if it does not give it in our Favour because our own Produce will be encouraged at the same Time. And it is to be observed, that tho' less Foreign Commodities are consumed in Proportion to the Number of People, yet this will be no Disadvantage to the Merchant, because the Number of People increasing, will occasion an increasing Demand of more Foreign Goods in the Whole.

Thus we have seen some of the many heavy Disadvantages a Country (especially such a Country as ours) must labour under, when it has not a sufficient Stock of running Cash to manage its Trade currently. And we have likewise seen some of the Advantages which accrue from having Money sufficient, or a Plentiful Currency.

The foregoing Paragraphs being well considered, we shall naturally be led to draw the following Conclusions with Regard to what Persons will probably be for or against Emitting a large Additional Sum of Paper Bills in this Province.

1. Since Men will always be powerfully influenced in their Opinions and Actions by what appears to be their particular Interest: Therefore all those, who wanting Courage to venture in Trade, now practise Lending Money on Security for exorbitant Interest, which in a Scarcity of Money will be done notwithstanding the Law, I say all such will probably be against a large Addition to our present Stock of Paper Money; because a plentiful Currency will lower Interest, and make it common to lend on less Security.
2. All those who are Possessors of large Sums of Money, and are disposed to purchase Land, which is attended with a great and sure Advantage in a growing Country as this is; I say, the Interest of all such Men will encline them to oppose a large Addition to our Money. Because their Wealth is now continually increasing by the large Interest they receive, which will enable them (if they can keep Land from rising) to purchase More some time hence than they can at present; and in the mean time all Trade being discouraged, not only those who borrow of them, but the Common People in general will be impoverished, and consequently obliged to sell More Land for less Money than they will do at present. And yet, after such Men are possessed of as much Land as they can purchase, it will then be their Interest to have Money made Plentiful, because that will immediately make Land rise in Value in their Hands. Now it ought not to be wondered at, if People from the Knowledge of a Man's Interest do sometimes make a true Guess at his Designs; for, Interest, they say, will not Lie.
3. Lawyers, and others concerned in Court Business, will probably many of them be against a plentiful Currency; because People in that Case will have less Occasion to run in Debt, and consequently less Occasion to go to Law and Sue one another for their Debts. Tho' I know some even among these Gentlemen, that regard the Publick Good before their own apparent private Interest.
4. All those who are any way Dependants on such Persons as are above mentioned, whether as holding Offices, as Tenants, or as Debtors, must at least appear to be against a large Addition; because if they do not, they must sensibly feel their present Interest hurt. And besides these, there are, doubtless, many well-meaning Gentlemen and Others, who, without any immediate private Interest of their own in View, are against making such an Addition, thro' an Opinion they may have of the Honesty and sound Judgment of some of their Friends that oppose it (perhaps for the Ends aforesaid), without having given it any thorough Consideration themselves. And thus it is no Wonder if there is a powerful Party on that Side. On the other Hand, Those who are Lovers of Trade, and delight to see Manufactures encouraged, will be for having a large Addition to our Currency: For they very well know, that People will have little Heart to advance Money in Trade, when what they can get is scarce sufficient to purchase Necessaries, and supply their Families with Provision. Much less will they lay it out in advancing new Manufactures; nor is it possible new Manufactures Should turn to any Account, where there is not Money to pay the Workmen, who are discouraged by being paid in Goods, because it is a great Disadvantage to them.

Again, Those who are truly for the Proprietor's Interest (and have no separate Views of their own that are predominant) will be heartily for a large Addition: Because, as I have shewn above, Plenty of Money will for several Reasons make Land rise in Value exceedingly: And I appeal to those immediately concerned for the Proprietor in the Sale of his Lands, whether Land has not risen very much since the first Emission of what Paper Currency we now have, and even by its Means. Now we all know the Proprietary has great Quantities to sell.

And since a Plentiful Currency will be so great a Cause of advancing this Province in Trade and Riches, and increasing the Number of its People; which, tho' it will not sensibly lessen the Inhabitants of Great Britain, will occasion a much greater Vent and Demand for their Commodities here; and allowing that the Crown is the more powerful for its Subjects increasing in Wealth and Number, I cannot think it the Interest of England to oppose us in making as great a Sum of Paper Money here, as we, who are the best Judges of our own Necessities, find convenient. And if I were not sensible that the Gentlemen

of Trade in England, to whom we have already parted with our Silver and Gold, are misinformed of our Circumstances, and therefore endeavour to have our Currency stinted to what it now is, I should think the Government at Home had some Reasons for discouraging and impoverishing this Province, which we are not acquainted with.

It remains now that we enquire, Whether a large Addition to our Paper Currency will not make it sink in Value very much; And here it will be requisite that we first form just Notions of the Nature and Value of Money in general.

As Providence has so ordered it, that not only different Countries, but even different Parts of the same Country, have their peculiar most suitable Productions; and likewise that different Men have Genius's adapted to Variety of different Arts and Manufactures, Therefore Commerce, or the Exchange of one Commodity or Manufacture for another, is highly convenient and beneficial to Mankind. As for Instance A may be skilful in the Art of making Cloth, and B understand the raising of Corn; A wants Corn, and B Cloth; upon which they make an Exchange with each other for as much as each has Occasion, to the mutual Advantage and Satisfaction of both.

But as it would be very tedious, if there were no other Way of general Dealing, but by an immediate Exchange of Commodities; because a Man that had Corn to dispose of, and wanted Cloth for it, might perhaps in his Search for a Chapman to deal with, meet with twenty People that had Cloth to dispose of, but wanted no Corn; and with twenty others that wanted his Corn, but had no Cloth to suit him with. To remedy such Inconveniences, and facilitate Exchange, men have invented MONEY, properly called a Medium of Exchange, because through or by its Means Labour is exchanged for Labour, or one Commodity for another. And whatever particular Thing Men have agreed to make this Medium of, whether Gold, Silver, Copper, or Tobacco; it is, to those who possess it (if they want any Thing) that very Thing which they want, because it will immediately procure it for them. It is Cloth to him that wants Cloth, and Corn to those that want Corn; and so of all other Necessaries, it is whatsoever it will procure. Thus he who had Corn to dispose of, and wanted to purchase Cloth with it, might sell his Corn for its Value in this general Medium, to one who wanted Corn but had no Cloth; and with this Medium he might purchase Cloth of him that wanted no Corn, but perhaps some other Thing, as Iron it may be, which this Medium will immediately procure, and so he may be said to have exchanged his Cloth for Iron; and thus the general Exchange is soon performed, to the Satisfaction of all Parties, with abundance of Facility.

For many Ages, those Parts of the World which are engaged in Commerce, have fixed upon Gold and Silver as the chief and most proper Materials for this Medium; they being in themselves valuable Metals for their Fineness, Beauty, and Scarcity. By these, particularly by Silver, it has been usual to value all Things else: But as Silver it self is no certain permanent Value, being worth more or less according to its Scarcity or Plenty, therefore it seems requisite to fix upon Something else, more proper to be made a Measure of Values, and this I take to be Labour.

By Labour may the Value of Silver be measured as well as other Things. As, Suppose one Man employed to raise Corn, while another is digging and refining Silver; at the Year's End, or any other Period of Time, the compleat Produce of Corn, and that of Silver, are the natural Price of each other; and if one be twenty Bushels, and the other twenty Ounces, then an Ounce of that Silver is worth the Labour of raising a Bushel of that Corn. Now if by the Discovery of some nearer, more easy or plentiful Mines, a Man may get Forty Ounces of Silver as easily as formerly he did Twenty, and the same Labour is still required to raise Twenty Bushels of Corn, then Two Ounces of Silver will be worth no more than the same Labour of raising One Bushel of Corn, and that Bushel of Corn will be as cheap at two Ounces, as it was before at one; *ceteris paribus*.

Thus the Riches of a Country are to be valued by the Quantity of Labour its Inhabitants are able to purchase, and not by the Quantity of Silver and Gold they possess; which will purchase more or less Labour, and therefore is more or less valuable, as is said before, according to its Scarcity or Plenty. As those Metals have grown much more plentiful in Europe since the Discovery of America, so they have sunk in Value exceedingly; for, to instance in England, formerly one Penny of Silver was worth a Days Labour, but now it is hardly worth the sixth Part of a Days Labour; because not less than Six-pence will purchase the Labour of a Man for a Day in any Part of that Kingdom; which is wholly to be attributed to the much greater Plenty of Money now in England than formerly. And yet perhaps England is in Effect no richer now than at that Time; because as much Labour might be purchas'd or Work got done of almost any kind, for 100 then, as will now require or is now worth 600.

In the next Place let us consider the Nature of Banks emitting Bills of Credit, as they are at this Time used in Hamburgh, Amsterdam, London and Venice.

Those Places being Seats of vast Trade, and the Payment of great sums being for that Reason frequent, Bills of Credit are found very convenient in Business; because a great Sum is more easily counted in Them, lighter in Carriage, concealed in less Room, and therefore safer in Travelling or Laying up, and on many other Accounts they are very much valued. The Banks are the general Cashiers of all Gentlemen, Merchants, and great Traders in and about those Cities; there they deposit their Money, and may take out Bills to the Value, for which they can be certain to have Money again at the Bank at any Time: This gives the Bills a Credit; so that in England they are never less valuable than Money, and in Venice and Amsterdam they are generally worth more. And the Bankers always reserving Money in hand to answer more than the common Run of Demands (and some People constantly putting in while others are taking out) are able besides to lend large Sums, on good Security, to the Government or others, for a reasonable Interest, by which they are paid for their Care and Trouble; and the Money which otherwise would have lain dead in their Hands, is made to circulate again and thereby among the People: and thus the Running Cash of the Nation is as it were doubled; for all great Payments being made in Bills, Money in lower Trade becomes much more plentiful: And this is an exceeding great Advantage to a Trading Country, that is not over-stock'd with Gold and Silver.

As those who take Bills out of the Banks in Europe, put in Money for Security; so here, and in some of the neighbouring Provinces, we engage our Land. Which of these Methods will most effectually secure the Bills from actually sinking in Value, comes next to be considered.

Trade in general being nothing else but the Exchange of Labour for Labour, the Value of all Things is, as I have said before, most justly measured by Labour. Now suppose I put my Money into a Bank, and take out a Bill for the Value; if this Bill at the Time of my receiving it, would purchase me the Labour of one hundred Men for twenty Days; but some time after will only purchase the Labour of the same Number of Men for fifteen Days; it is plain the Bill has sunk in value one fourth Part. Now Silver and Gold being of no permanent Value; and as this Bill is founded on Money, and therefore to be esteemed as such, it may be that the Occasion of this Fall is the increasing Plenty of Gold and Silver, by which Money is one fourth Part less valuable than before, and therefore one fourth more is given of it for the same Quantity of Labour; and if Land is not become more plentiful by some proportionate Decrease of the People, one fourth Part more of Money is given for the same Quantity of Land, whereby it appears that it would have been more profitable to me to have laid that Money out in Land which I put into the Bank, than to place it there and take a Bill for it. And it is certain that the Value

of Money has been continually sinking in England for several Ages past, because it has been continually increasing in Quantity. But if Bills could be taken out of a Bank in Europe on a Land Security, it is probable the Value of such Bills would be more certain and steady, because the Number of Inhabitants continue to be near the same in those Countries from Age to Age.

For as Bills issued upon Money Security are Money, so Bills issued upon Land, are in Effect Coined Land.

Therefore (to apply the Above to our own Circumstances) If Land in this Province was falling, or any way likely to fall, it would behove the Legislature most carefully to contrive how to prevent the Bills issued upon Land from falling with it. But as our People increase exceedingly, and will be further increased, as I have before shewn, by the Help of a large Addition to our Currency; and as Land in consequence is continually rising, So, in case no Bills are emitted but what are upon Land Security, the Money-Acts in every Part punctually enforced and executed, the Payments of Principal and Interest being duly and strictly required, and the Principal bona fide sunk according to Law, it is absolutely impossible such Bills should ever sink below their first Value, or below the Value of the Land on which they are founded. In short, there is so little Danger of their sinking that they would certainly rise as the Land rises, if they were not emitted in a proper Manner for preventing it; that is, by providing in the Act That Payment may be made, either in those Bills, or in any other Bills made current by any Act of the Legislature of this Province; and that the Interest, as it is received, may be again emitted in Discharge of Publick Debts; whereby circulating it returns again into the Hands of the Borrowers, and becomes Part of their future Payments; and thus as it is likely there will not be any Difficulty for want of Bills to pay the Office, they are hereby kept from rising above their first Value; For else, supposing there should be emitted upon mortgaged Land its full present Value in Bills; as in the Banks in Europe the full value of the Money deposited is given out in Bills; and supposing the Office would take nothing but the same Sum in those Bills in Discharge of the Land; as in the Banks aforesaid, the same Sum in their Bills must be brought in, in order to receive out the Money: In such Case the Bills would most surely rise in Value as the Land rises; as certain as the Bank Bills founded on Money would fall if that Money was falling. Thus if I were to mortgage to a Loan-Office, or Bank, a Parcel of Land now valued at 100 in Silver, and receive for it the like Sum in Bills, to be paid in again at the Expiration of a certain Term of Years; before which, my Land rising in Value becomes worth 150 in Silver: 'Tis plain, that if I have not these Bills in Possession, and the Office will take nothing but these Bills, or else what it is now become worth in Silver, in Discharge of my Land; I say it appears plain, that those Bills will now be worth 150 in Silver to the Possessor; and if I can purchase them for less, in order to redeem my Land, I shall by so much be a Gainer.

I need not say any Thing to convince the Judicious that our Bills have not yet sunk, tho' there is and has been some Difference between them and Silver; because it is evident that that Difference is occasioned by the Scarcity of the latter, which is now become a Merchandize, rising and falling, like other Commodities, as there is a greater or less Demand for it, or as it is more or less Plenty.

Yet farther, in order to make a true Estimate of the Value of Money, we must distinguish between Money as it is Bullion, which is Merchandize, and as by being coin'd it is made a Currency: For its Value as a Merchandize, and its Value as a Currency, are two distinct Things; and each may possibly rise and fall in some Degree independent of the other. Thus if the Quantity of Bullion increases in a Country, it will proportionably decrease in Value; but if at the same Time the Quantity of current Coin should decrease (supposing Payments may not be made in Bullion) what Coin there is will rise in Value as a Currency, i.e. People will give more Labour in Manufactures for a certain Sum of ready Money.

In the same Manner must we consider a Paper Currency founded on Land; as it is Land, and as it is a Currency

Money as Bullion, or as Land, is valuable by so much Labour as it costs to procure that Bullion or Land.

Money, as a Currency, has an Additional Value by so much Time and Labour as it saves in the Exchange of Commodities.

If, as a Currency, it saves one Fourth Part of the Time and Labour of a Country; it has, on that Account, one Fourth added to its original Value.

When there is no Money in a Country, all Commerce must be by Exchange. Now if it takes one fourth Part of the Time and Labour of a Country, to exchange or get their Commodities exchanged; then, in computing their Value, that Labour of Exchanging must be added to the Labour of manufacturing those Commodities: But if that Time or Labour is saved by introducing Money sufficient, then the additional Value on Account of the Labour of Exchanging must be abated, and Things sold for only the Value of the Labour in making them; because the People may now in the same Time make one Fourth more in Quantity of Manufactures than they could before.

From these Considerations it may be gathered, that in all the Degrees between having no Money in a Country, and Money sufficient for the Trade, it will rise and fall in Value as a Currency, in Proportion to the Decrease or Increase of its Quantity: and if there may be at some Time more than enough, the Overplus will have no Effect towards making the Currency, as a Currency, of less value than when there was but enough; because such Overplus will not be used in Trade, but be some other way disposed of.

If we enquire, How much per Cent. Interest ought to be required upon the Loan of these Bills; we must consider what is the Natural Standard of Usury: And this appears to be, where the Security is undoubted, at least the Rent of so much Land as the Money lent will buy: For it cannot be expected that any Man will lend his Money for less than it would fetch him in as Rent if he laid it out in Land, which is the most secure Property in the World. But if the Security is casual, then a kind of Ensurance must be enterwoven with the simple natural Interest, which may advance the Usury very conscionably to any height below the Principal it self. Now among us, if the Value of Land is twenty Years Purchase, Five per Cent. is the just Rate of Interest for Money lent on undoubted Security. Yet if Money grows scarce in a Country, it becomes more difficult for People to make punctual Payments of what they borrow, Money being hard to be raised; likewise Trade being discouraged, and Business impeded for want of a Currency, abundance of People must be in declining Circumstances, and by these Means Security is more precarious than where Money is plenty. On such Accounts it is no wonder if People ask a greater Interest for their Money than the natural Interest; and what is above is to be look'd upon as a kind of Premium for the Ensurance of those Uncertainties, as they are greater or less. Thus we always see, that where Money is scarce, Interest is high, and low where it is plenty. Now it is certainly the Advantage of a Country to make Interest as low as possible, as I have already shewn; and this can be done no other way than by making Money plentiful. And since, in Emitting Paper Money among us, the Office has the best of Security, the Titles to the Land being all skilfully and strictly examined and ascertained; and as it is only permitting the People by Law to coin their own Land, which costs the Government nothing, the Interest being more than enough to pay the charges of Printing, Officers Fees, &c. I cannot see any good Reason why Four per Cent. to the Loan-Office should not be thought fully sufficient. As a low Interest may incline more to take Money out, it will become more plentiful in Trade; and this may bring down the common Usury, in which Security is more dubious, to the Pitch it is determined at by Law.

If it should be objected, That the Emitting It at so low an Interest, and on such easy Terms, will occasion more to be taken out than the Trade of the Country really requires: It may be answered, That, as has already been shewn, there can never be so much of it emitted as to make it fall below the Land it is founded on; because no Man in his Senses will mortgage his Estate for what is of no more Value to him than That he has mortgaged, especially if the Possession of what he receives is more precarious than of what he mortgages, as that of Paper Money is when compared to Land: And if it should ever become so plenty by indiscreet Persons continuing to take out a large Overplus, above what is necessary in Trade, so as to make People imagine it would become by that Means of less Value than their mortgaged Lands, they would immediately of Course begin to pay it in again to the Office to redeem their Land, and continue to do so till there was no more left in Trade than was absolutely necessary. And thus the Proportion would find it self, (tho' there were a Million too much in the Office to be let out) without giving any one the Trouble of Calculation.

It may perhaps be objected to what I have written concerning the Advantages of a large Addition to our Currency, That if the People of this Province increase, and Husbandry is more followed, we shall overstock the Markets with our Produce of Flower, &c. To this it may be answered, that we can never have too many People (nor too much Money) For when one Branch of Trade or Business is overstocked with Hands, there are the more to spare to be employed in another. So if raising Wheat proves dull, more may (if there is Money to support and carry on new Manufactures) proceed to the raising and manufacturing of Hemp, Silk, Iron and many other Things the Country is very capable of, for which we only want People to work, and Money to pay them with.

Upon the Whole it may be observed, That it is the highest Interest of a Trading Country in general to make Money plentiful; and that it can be a Disadvantage to none that have honest Designs. It cannot hurt even the Usurers, tho' it should sink what they receive as Interest; because they will be proportionably more secure in what they lend; or they will have an Opportunity of employing their Money to greater Advantage, to themselves as well as to the Country. Neither can it hurt those Merchants who have great Sums out-standing in Debts in the Country, and seem on that Account to have the most plausible Reason to fear it; to wit, because a large Addition being made to our Currency, will increase the Demand of our Exporting Produce, and by that Means raise the Price of it, so that they will not be able to purchase so much Bread and Flower with 100 when they shall receive it after such an Addition, as they now can, and may if there is no Addition: I say it cannot hurt even such, because they will get in their Debts just in exact Proportion so much the easier and sooner as the Money becomes plentier; and therefore, considering the Interest and Trouble saved, they will not be Losers; because it only sinks in Value as a Currency, proportionally as it becomes more plenty. It cannot hurt the Interest of Great Britain, as has been shewn; and it will greatly advance the Interest of the Proprietor. It will be an Advantage to every industrious Tradesman, &c. because his Business will be carried on more freely, and Trade be universally enlivened by it. And as more Business in all Manufactures will be done, by so much as the Labour and Time spent in Exchange is saved, the Country in general will grow so much the richer.

It is nothing to the Purpose to object the wretched Fall of the Bills in New-England and South-Carolina, unless it might be made evident that their Currency was emitted with the same Prudence, and on such good Security as ours is; and it certainly was not.

As this Essay is wrote and published in Haste, and the Subject in it self intricate, I hope I shall be censured with Candour, if, for want of Time carefully to revise what I have written, in some Places I should appear to have express'd my self too obscurely, and in others am liable to Objections I did not foresee. I sincerely desire to be acquainted with the Truth, and on that Account shall think my self obliged to any one, who will take the Pains to shew me, or the Publick, where I am mistaken in my Conclusions, And as we all know there are among us several Gentlemen of acute Parts and profound Learning, who are very much against any Addition to our Money, it were to be wished that they would favour the Country with their Sentiments on this Head in Print; which, supported with Truth and good Reasoning, may probably be very convincing. And this is to be desired the rather, because many People knowing the Abilities of those Gentlemen to manage a good Cause, are apt to construe their Silence in This, as an Argument of a bad One. Had any Thing of that Kind ever yet appeared, perhaps I should not have given the Publick this Trouble: But as those ingenious Gentlemen have not yet (and I doubt never will) think it worth their Concern to enlighten the Minds of their erring Countrymen in this Particular, I think it would be highly commendable in every one of us, more fully to bend our Minds to the Study of What is the true Interest of PENNSYLVANIA; whereby we may be enabled, not only to reason pertinently with one another; but, if Occasion requires, to transmit Home such clear Representations, as must inevitably convince our Superiors of the Reasonableness and Integrity of our Designs.

Oglethorpe's Vision for the Founding of Georgia (1733)

As the last English colony established in America, Georgia was designed as a refuge where British debtors and criminals could have a new beginning and become self-sustaining. Hopes were high for the new colony, which was established with no slavery, and the mother country expected it to produce a steady stream of exports such as silk, oil, dyes, and medicines. The following, by James Oglethorpe, was published as a pamphlet in 1733 under the title "Some Account of the Designs of the Trustees for Establishing the Colony of Georgia in America."

In America there are fertile lands sufficient to subsist all the useless Poor in *England*, and distressed Protestants in Europe; yet Thousands starve for want of mere sustenance. The distance makes it difficult to get thither. The same want that renders men useless here, prevents their paying their passage; and if others pay it for 'em, they become servants, or rather slaves for years to those who have defrayed the expense. Therefore, money for passage is necessary, but is not the only want; for if people were set down in America, and the land before them, they must cut down trees, build

houses, fortify towns, dig and sow the land before they can get in a harvest; and till then, they must be provided with food, and kept together, that they may be assistant to each other for their natural support and protection.

The Romans esteemed the sending forth of Colonies, among their noblest works; they observed that Rome, as she increased in power and empire, drew together such a conflux of people from all parts that she found herself over-burdened with their number, and the government brought under an incapacity to provide for them, or keep them in order. Necessity, the mother of invention, suggested to them an expedient, which at once gave ease to the capital, and increased the wealth and number of industrious citizens, by lessening the useless and unruly multitude; and by planting them in colonies on the frontiers of their empire, gave a new Strength to the whole; and *This* they looked upon to be so considerable a service to the commonwealth, that they created peculiar officers for the establishment of such colonies, and the expence was defrayed out of the public treasury.

FROM THE CHARTER.—His Majesty having taken into his consideration, the miserable circumstances of many of his own poor subjects, ready to perish for want: as likewise the distresses of many poor foreigners, who would take refuge here from persecution; and having a Princely regard to the great danger the southern frontiers of South Carolina are exposed to, by reason of the small number of white inhabitants there, hath, out of his Fatherly compassion towards his subjects, been graciously pleased to grant a charter for incorporating a number of gentlemen by the name of *The Trustees for establishing the Colony of Georgia in America*. They are empowered to collect benefactions; and lay them out in cloathing, arming, sending over, and supporting colonies of the poor, whether subjects or foreigners, in Georgia. And his Majesty farther grants all his lands between *Savannah and Alatomaha*, which he erects into a Province by the name of GEORGIA, unto the Trustees, in trust for the poor, and for the better support of the Colony. At the desire of the Gentlemen, there are clauses in the Charter, restraining them and their successors from receiving any salary, fee, perquisite, or profit, whatsoever, by or from this undertaking; and also from receiving any grant of lands within the said district, to themselves, or in trust for them. There are farther clauses granting to the Trustees proper powers for establishing and governing the Colony, and liberty of conscience to all who shall settle there.

The Trustees intend to relieve such unfortunate persons as cannot subsist here, and establish them in an orderly manner, so as to form a well regulated town. As far as their fund goes, they will defray the charge of their passage to Georgia; give them necessaries, cattle, land, and subsistence, till such time as they can build their houses and clear some of their land. They rely for success, first on the goodness of Providence, next on the compassionate disposition of the people of England; and, they doubt not, that much will be spared from luxury, and superfluous expenses, by generous tempers, when such an opportunity is offered them by the giving of £20 to provide for a man or woman, or £10 to a child for ever.

In order to prevent the benefaction given to this purpose, from ever being misapplied; and to keep up, as far as human Precaution can, a spirit of Disinterestedness, the Trustees have established the following method: That, each Benefactor may know what he has contributed is safely lodged, and justly accounted for, all money given will be deposited in the Bank of England; and entries made of every benefaction, in a book to be kept for that purpose by the Trustees; or, if concealed, the names of those, by whose hands they sent their money. There are to be annual accounts of all the money received, and how the same has been disposed of, laid before the Lord High Chancellor, the Lord Chief Justice of the King's Bench, the Master of the Rolls, the Lord Chief Justice of the Common Pleas, and the Lord Chief Baron of the Exchequer, or two of them, will be transmitted to every considerable Benefactor.

By such a Colony, many families, who would otherwise starve, will be provided for, and made masters of houses and lands; the people in Great Britain to whom these necessitous families were a burden, will be relieved; numbers of manufacturers will be here employed, for supplying them with clothes, working tools, and other necessaries; and by giving refuge to the distressed Saltzburghers, and other persecuted Protestants, the power of Britain, as a reward for its hospitality, will be encreased by the addition of so many religious and industrious subjects.

The Colony of Georgia lying about the same latitude with part of China, Persia, Palestine, and the Madeiras, it is highly probable that when hereafter it shall be well-peopled and rightly cultivated, ENGLAND may be supplied from thence with raw Silk, Wine, Oil, Dyes, Drugs, and many other materials for manufactures, which she is obliged to purchase from Southern countries. As towns are established and grow populous along the rivers Savannah and Alatomaha, they will make such a barrier as will render the southern frontier of the British Colonies on the Continent of America, safe from Indian and other enemies.

All human affairs are so subject to chance, that there is no answering for events; yet from reason and the nature of things, it may be concluded, that the riches and also the number of the inhabitants in Great Britain will be increased, by importing at a cheap rate from this new Colony, the materials requisite for carrying on in Britain several manufactures. For our Manufacturers will be encouraged to marry and multiply, when they find themselves in circumstances to provide for their families, which must necessarily be the happy effect of the increase and cheapness of our materials of those Manufactures, which at present we purchase with our money from foreign countries, at dear rates; and also many people will find employment here, on account such farther demands by the people of this Colony, for those manufactures which are made for the produce of our own country; and, as has been justly observed, the people will always abound where there is full employment for them.

CHRISTIANITY will be extended by the execution of this design; since, the good discipline established by the Society, will reform the manners of those miserable objects, who shall be by them subsisted; and the example of a whole Colony, who shall behave in a just, moral, and religious manner, will contribute greatly towards the conversion of the Indians, and taking off the prejudices received from the profligate lives of such who have scarce any thing of Christianity but the name.

The Trustees in their general meetings, will consider of the most prudent methods for effectually establishing a regular Colony; and that it may be done, is demonstrable. Under what difficulties, was Virginia planted?—the coast and climate then unknown; the Indians numerous, and at enmity with the first Planters, who were forced to fetch all provisions from England; yet it is grown a mighty Province, and the Revenue receives £100,000 for duties upon the goods that they send yearly home. Within this 50 years, Pennsylvania was as much a forest as Georgia is now; and in these few years, by the wise economy of William Penn, and those who assisted him, it now gives food to 80,000 inhabitants, and can boast of as fine a City as most in Europe.

This new Colony is more likely to succeed than either of the former were, since Carolina abounds with provisions, the climate is known, and there are men to instruct in the seasons and nature of cultivating the soil. There are but few Indian families within 400 miles; and those, in perfect amity with the English.—*Port Royal* (the station of his Majesty's ships) is within 30, and *Charlestown* (a great mart) is within 120 miles. If the Colony is attacked, it may be relieved by sea, from Port Royal, or the Bahamas; and the Militia of South Carolina is ready to support it, by land.

For the continuing the relief which is now given, there will be lands reserved in the Colony; and the benefit arising from them is to go to the carrying on of the trust. So that, at the same time, the money by being laid out preserves the lives of the poor, and makes a comfortable provision for those whose expenses are by it defrayed; their labor in improving their own lands, will make the adjoining reserved lands valuable; and the rents of those reserved lands will be a perpetual fund for the relieving more poor people. So that instead of laying out the money upon lands, with the income thereof to support the poor, this is laying out money upon the poor; and by relieving those who are now unfortunate, raises a fund for the perpetual relief of those who shall be so hereafter.

There is an occasion now offered for every one, to help forward this design; the smallest benefaction will be received, and applied with the utmost care:—every little will do something; and a great number of small benefactions will amount to a sum capable of doing a great deal of good.

If any person, moved with the calamities of the unfortunate, shall be inclined to contribute towards their relief, they are desired to pay their benefactions into the Bank of England, on account of the Trustees for establishing the Colony of Georgia in America; or else, to any of the Trustees, who are, &c.

The Trial of Peter Zenger (1735)

Beginning in 1733, John Peter Zenger, the publisher of the *New York Weekly Journal*, printed critical articles in his newspaper about New York Governor William Cosby. Zenger was arrested for seditious libel and came before Chief Justice James Delancey, a judge handpicked by Cosby.

During the trial, Zenger was represented by the eloquent Philadelphia attorney Andrew Hamilton, who argued that Zenger had indeed printed the statements in question, however, they were not libelous but true. Ignoring Delancey's instructions, the jury found Zenger not guilty, and he was acquitted. This landmark case helped establish the democratic principle of freedom of the press in the colonies.

The Trial Begins—August 4, 1735

James Delancey, Chief Justice of the Province of New York

Frederick Philipse, Associate Justice

[Attorney, General Richard Bradley]

Mr. Attorney: ... "The case before the Court is whether Mr. Zenger is guilty of libeling His Excellency the Governor of New York, and indeed the whole administration of the government. Mr. Hamilton has confessed the printing and publishing, and I think nothing is plainer than that the words in the information are 'scandalous, and tend to sedition, and to disquiet the minds of the people' of this Province. If such papers are not libels, I think it may be said that there can be no such thing as a libel."

Mr. Hamilton: "May it please Your Honor, I cannot agree with Mr. Attorney. For although I freely acknowledge that there are such things as libels, yet I must insist at the same time that what my client is charged with is not a libel. And I observed just now that Mr. Attorney, in defining a libel, made use of the words 'scandalous, seditious, and tend to disquiet the people.' But, whether with design or not I will not say, he omitted the word 'false.'"

Mr. Attorney: "I think that I did not omit the word 'false.' But it has been said already that it may be a libel notwithstanding that it may be true."

Mr. Hamilton: "In this I must still differ with Mr. Attorney. For I depend upon it that we are to be tried upon this information now before the Court and the jury, and to which we have pleaded 'Not guilty.' By it we are charged with printing and publishing 'a certain false, malicious, seditious, and scandalous libel.' This word 'false' must have some meaning, or else how came it there? I hope Mr. Attorney will not say he put it there by chance, and I am of the opinion that his information would not be good without it. But to show that it is the principal thing which, in my opinion, makes a libel, suppose that the information had been for printing and publishing a certain true libel, would that be the same thing? Or could Mr. Attorney support such an information by any precedent in the English law? No, the falsehood makes the scandal, and both make the libel. And to show the Court that I am in good earnest, and to save the Court's time and Mr. Attorney's trouble, I will agree that if he can prove the facts charged upon us to be false, I shall own them to be scandalous, seditious, and a libel. So the work seems now to be pretty much shortened, and Mr. Attorney has now only to prove the words false in order to make us guilty."

Mr. Attorney: "We have nothing to prove. You have confessed the printing and publishing. But if it were necessary, as I insist it is not, how can we prove a negative? I hope some regard will be had to the authorities that have been produced, and that supposing all the words to be true, yet that will not help them. Chief Justice Holt, in his charge to the jury in the case of Tutchin, made no distinction whether Tutchin's papers were true or false; and as Chief Justice Holt has made no distinction in that case, so none ought to be made here; nor can it be shown that, in all that case, there was any question made about their being false or true."

Mr. Hamilton: "I did expect to hear that a negative cannot be proved. But everybody knows there are many exceptions to that general rule. For if a man is charged with killing another, or stealing his neighbor's horse, if he is innocent in the one case he may prove the man said to be killed to be really alive, and the horse said to be stolen never to have been out of his master's stable, etc. And this, I think, is proving a negative."

"But we will save Mr. Attorney the trouble of proving a negative, take the onus probandi [burden of proof] on ourselves, and prove those very papers that are called libels to be true."

Mr. Chief Justice: "You cannot be admitted, Mr. Hamilton, to give the truth of a libel in evidence. A libel is not to be justified; for it is nevertheless a libel that it is true."

Mr. Hamilton: "I am sorry the Court has so soon resolved upon that piece of law. I expected first to have been heard to that point. I have not, in all my reading, met with an authority that says we cannot be admitted to give the truth in evidence upon an information for libel."

Mr. Chief Justice: "The law is clear that you cannot justify a libel."

Mr. Hamilton: "I own that, may it please Your Honor, to be so. But, with submission, I understand the word 'justify' there to be a justification by plea, as it is in the case upon an indictment for murder or an assault and battery. There the prisoner cannot justify, but pleads 'Not guilty.' Yet it will not be denied but he may be, and always is, admitted to give the truth of the fact, or any other matter, in evidence, which goes to his acquittal. As in murder he may prove that it was in defense of his life, his house, etc.; and in assault and battery he may give in evidence that the other party struck first: and in both cases he will be acquitted. In this sense I understand the word 'justify' when applied to the case before the Court."

Mr. Chief Justice: "I pray, show that you can give the truth of a libel in evidence."

Mr. Hamilton: "How shall it be known whether the words are libelous, that is, true or false, but by admitting us to prove them true, since Mr. Attorney will not undertake to prove them false? Besides, is it not against common sense that a man should be punished in the same degree for a true libel, if any such thing could be, as for a false one? I know it is said that truth makes a libel the more provoking, and therefore the offense is greater, and consequently the judgment should be the heavier. Well, suppose it were so, and let us agree for once that truth is a greater sin than falsehood. Yet, as the offenses are not equal, and as the punishment is arbitrary, that is, according as the judges in their discretion shall direct to be inflicted, is it not absolutely necessary that they should know whether the libel is true or false, that they may by that means be able to proportion the punishment?"

"For would it not be a sad case if the judges, for want of a due information, should chance to give as severe a judgment against a man for writing or publishing a lie, as for writing or publishing a truth? And yet this, with submission, as monstrous and ridiculous as it may seem to be, is the natural consequence of Mr. Attorney's doctrine that truth makes a worse libel than falsehood, and must follow from his not proving our papers to be false, or not suffering us to prove them to be true.

"In the case of Tutchin, which seems to be Mr. Attorney's chief authority, that case is against him; for Tutchin was, at his trial, put upon showing the truth of his papers; but he did not. At least the prisoner was asked by the king's counsel whether he would say that they were true. And as he never pretended that they were true, the Chief Justice was not to say so.

"But the point will be clearer on our side from Fuller's case.' Here you see is a scandalous and infamous charge against the late king; here is a charge no less than high treason, against the men in public trust, for receiving money of the French king, then in actual war with the crown of Great Britain; and yet the Court were far from bearing him down with that star chamber doctrine, to wit, that it was no matter whether what he said was true or false. No, on the contrary, Lord Chief Justice Holt asks Fuller, 'Can you make it appear that they are true? Have you any witnesses? You might have had subpoenas for your witnesses against this day. If you take it upon you to write such things as you are charged with, it lies upon you to prove them true, at your peril. If you have any witnesses, I will hear them. How came you to write those books which are not true? If you have any witnesses, produce them. If you can offer any matter to prove what you wrote, let us hear it.' Thus said, and thus did, that great man, Lord Chief Justice Holt, upon a trial of the like kind with ours; and the rule laid down by him in this case is that he who will take upon him to write things, it lies upon him to prove them, at his peril. Now, sir, we have acknowledged the printing and publishing of those papers set forth in the information and, with the leave of the Court, agreeable to the rule laid down by Chief Justice Holt, we are ready to prove them to be true, at our peril."

Mr. Chief Justice: "Let me see the book."

Mr. Chief Justice: "Mr. Attorney, you have heard what Mr. Hamilton has said, and the cases he has cited, for having his witnesses examined to prove the truth of the several facts contained in the papers set forth in the information. What do you say to it?"

Mr. Attorney: "The law, in my opinion, is very clear. They cannot be admitted to justify a libel, for by the authorities I have already read to the Court it is not the less a libel because it is true. I think I need not trouble the Court over again. The thing seems to be very plain, and I submit it to the Court."

Mr. Chief Justice: "Mr. Hamilton, the Court is of the opinion that you ought not to be permitted to prove the facts in the papers. these are the words of the book, 'It is far from being a justification of a libel that the contents thereof are true, or that the person upon whom it is made had a bad reputation, since the greater appearance there is of truth in any malicious invective, so much the more provoking it is.'"

Mr. Hamilton: "These are Star Chamber cases, and I was in hopes that practice had been dead with the court."

Mr. Chief Justice: "Mr. Hamilton, the Court have delivered their opinion, and we expect that you will use us with good manners. You are not to be permitted to argue against the opinion of the Court."

Mr. Hamilton: "With submission, I have seen the practice in very great courts, and never heard it deemed unmannerly to-

Mr. Chief Justice: "After the Court have declared their opinion, it is not good manners to insist upon a point in which you are overruled."

Mr. Hamilton: "I will say no more at this time. The Court, I see, is against us in this point-and that I hope I may be allowed to say."

Mr. Chief Justice: "Use the Court with good manners and you shall be allowed all the liberty you can reasonably desire."

Mr. Hamilton: "I thank Your Honor. Then, Gentlemen of the Jury, it is to you that we must now appeal for witnesses to the truth of the facts we have offered, and are denied the liberty to prove. Let it not seem strange that I apply myself to you in this manner. I am warranted by both law and reason.

"The law supposes you to be summoned out of the neighborhood where the fact is alleged to be committed; and the reason of your being taken out of the

neighborhood is because you are supposed to have the best knowledge of the fact that is to be tried. Were you to find a verdict against my client, you must take it upon you to say that the papers referred to in the information, and which we acknowledge we printed and published, are false, scandalous, and seditious.

"But of this I can have no apprehension. You are citizens of New York. You are really what the law supposes you to be, honest and lawful men; and according to my brief, the facts which we offer to prove were not committed in a corner. They are notoriously known to be true. Therefore in your justice lies our safety. And as we are denied the liberty of giving evidence to prove the truth of what we have published, I will beg leave to lay it down as a standing rule in such cases that the suppressing of evidence ought always to be taken for the strongest evidence; and I hope it will have that weight with you.

"But since we are not admitted to examine our witnesses, I will endeavor to shorten the dispute with Mr. Attorney, and to that end I desire he would favor us with some standard definition of a libel by which it may be certainly known whether a writing be a libel, yes or no."

Mr. Attorney: "The books, I think, have given a very full definition of libel."

Mr. Hamilton: "Ay, Mr. Attorney, but what standard rule have the books laid down by which we can certainly know whether the words or signs are malicious? Whether they are defamatory? Whether they tend to the breach of the peace, and are a sufficient ground to provoke a man, his family, or his friends to acts of revenge: especially the ironical sort of words? What rule have you to know when I write ironically? I think it would be hard when I say, 'Such a man is a very worthy honest gentleman, and of fine understanding,' that therefore I mean, 'He is a knave or a fool.'"

Mr. Attorney: "I think the books are very full. It is said in Hawkins, just now read, 'Such scandal as is expressed in a scoffing and ironical manner makes a writing as properly a libel as that which is expressed in direct terms.' I think nothing can be plainer or more full than these words."

Mr. Hamilton: "I agree the words are very plain, and I shall not scruple to allow (when we are agreed that the words are false and scandalous, and were spoken in an ironical and scoffing manner) that they are really libelous. But here still occurs the uncertainty which makes the difficulty to know what words are scandalous, and what are not. For you say that they may be scandalous, whether true or false.

"Besides, how shall we know whether the words were spoken in a scoffing and ironical manner, or seriously? Or how can you know whether the man did not think as he wrote? For by your rule, if he did, it is no irony, and consequently no libel.

"But under favor, Mr. Attorney, I think the same book, and under the same section, will show us the only rule by which all these things are to be known. The words are these, 'which kind of writing is as well understood to mean only to upbraid the parties with the want of these qualities as if they had directly and expressly done so.' Here it is plain that the words are scandalous, scoffing, and ironical only as they are understood. I know no rule laid down in the books but this, I mean, as the words are understood."

Mr. Chief Justice: "Mr. Hamilton, do you think it so hard to know when words are ironical or spoken in a scoffing manner?"

Mr. Hamilton: "I own it may be known. But I insist that the only rule by which to know is—as I do or can understand them. I have no other rule to go by but as I understand them."

Mr. Chief Justice: "That is certain. All words are libelous or not as they are understood. Those who are to judge of the words must judge whether they are scandalous, or ironical, or tend to the breach of the peace, or are seditious. There can be no doubt of it."

Mr. Hamilton: "I thank Your Honor. I am glad to find the Court of this opinion. Then it follows that these twelve men must understand the words in the information to be scandalous—that is to say, false. For I think it is not pretended they are of the ironical sort. And [only] when they understand the words to be so, they will say that we are guilty of publishing a false libel, and not otherwise."

Mr. Chief Justice: "No, Mr. Hamilton, the jury may find that Zenger printed and published those papers, and leave it to the Court to judge whether they are libelous. You know this is very common. It is in the nature of a special verdict, where the jury leave the matter of the law to the court."

Mr. Hamilton: "I know, may it please Your Honor, the jury may do so. But I do likewise know that they may do otherwise. I know that they have the right beyond all dispute to determine both the law and the fact; and where they do not doubt of the law, they ought to do so. Leaving it to judgment of the court whether the words are libelous or not in effect renders juries useless (to say no worse) in many cases. But this I shall have occasion to speak to by and by.

"Although I own it to be base and unworthy to scandalize any man, yet I think it is even more villainous to scandalize a person of public character. I will go so far into Mr. Attorney's doctrine as to agree that if the faults, mistakes, nay even the vices of such a person be private and personal, and do not affect the peace of the public, or the liberty or property of our neighbor, it is unmanly and unmannerly to expose them either by word or writing. But when a ruler of a people brings his personal failings, but much more his vices, into his administration, and the people find themselves affected by them either in their liberties or properties, that will alter the case mightily; and all the things that are said in favor of rulers and of dignitaries, and upon the side of power, will not be able to stop people's mouths when they feel themselves oppressed. I mean, in a free government."

Mr. Attorney: "Pray, Mr. Hamilton, have a care what you say, don't go too far. I don't like those liberties."

Mr. Hamilton: "Surely, Mr. Attorney, you won't make any applications. All men agree that we are governed by the best of kings, and I cannot see the meaning of Mr. Attorney's caution. My well-known principles, and the sense I have of the blessings we enjoy under His Majesty, make it impossible for me to err, and I hope even to be suspected, in that point of duty to my king."

Hamilton's Summation for Zenger

"May it please Your Honor, I was saying that notwithstanding all the duty and reverence claimed by Mr. Attorney to men in authority, they are not exempt from observing the rules of common justice either in their private or public capacities. The laws of our mother country know no exemptions. It is true that

men in power are harder to be come at for wrongs they do either to a private person or to the public, especially a governor in The Plantations, where they insist upon an exemption from answering complaints of any kind in their own government. We are indeed told, and it is true, that they are obliged to answer a suit in the king's courts at Westminster for a wrong done to any person here. But do we not know how impracticable this is to most men among us, to leave their families, who depend upon their labor and care for their livelihood, and carry evidence to Britain, and at a great, nay, a far greater expense than almost any of us are able to bear, only to prosecute a governor for an injury done here?

"But when the oppression is general, there is no remedy even that way. No, our Constitution has—blessed be God—given us an opportunity, if not to have such wrongs redressed, yet by our prudence and resolution we may in a great measure prevent the committing of such wrongs by making a governor sensible that it is in his interest to be just to those under his care. For such is the sense that men in general—I mean free men—have of common justice, that when they come to know that a chief magistrate abuses the power with which he is trusted for the good of the people, and is attempting to turn that very power against the innocent, whether of high or low degree, I say that mankind in general seldom fail to interpose, and, as far as they can, prevent the destruction of their fellow subjects.

"And has it not often been seen—I hope it will always be seen that when the representatives of a free people are by just representations or remonstrances made sensible of the sufferings of their fellow subjects, by the abuse of power in the hands of a governor, that they have declared (and loudly too) that they were not obliged by any law to support a governor who goes about to destroy a Province or Colony, or their privileges, which by His Majesty he was appointed, and by the law he is bound, to protect and encourage? But I pray that it may be considered—of what use is this mighty privilege if every man that suffers is silent? And if a man must be taken up as a libeler for telling his sufferings to his neighbor?

"I know that it may be answered, 'Have you not a legislature? Have you not a House of Representatives to whom you may complain?' To this I answer, 'We have.' But what then? Is an Assembly to be troubled with every injury done by a governor? Or are they to hear of nothing but what those in the administration will please to tell them? And what sort of trial must a man have? How is he to be remedied, especially if the case were, as I have known to happen in America in my time, that a governor who has places—I will not say pensions, for I believe they seldom give that to another which they can take to themselves—to bestow can keep the same Assembly, after he has modeled them so as to get a majority of the House in his interest, for near twice seven years together? I pray, what redress is to be expected for an honest man who makes his complaint against a governor to an Assembly who may properly enough be said to be made by the same governor against whom the complaint is made? The thing answers itself.

"No, it is natural, it is a privilege, I will go farther, it is a right, which all free men claim, that they are entitled to complain when they are hurt. They have a right publicly to remonstrate against the abuses of power in the strongest terms, to put their neighbors upon their guard against the craft or open violence of men in authority, and to assert with courage the sense they have of the blessings of liberty, the value they put upon it, and their resolution at all hazards to preserve it as one of the greatest blessings heaven can bestow.

"When a House of Assembly composed of honest freemen sees the general bent of the people's inclination, that is it which must and will, I am sure it ought to, weigh with a legislature in spite of all the craft, caressing, and cajoling made use of by a governor to divert them from harkening to the voice of their country. As we all very well understand the true reason why gentlemen take so much pains and make such great interest to be appointed governors, so is the design of their appointment not less manifest. We know His Majesty's gracious intentions toward his subjects. He desires no more than that his people in The Plantations should be kept up to their duty and allegiance to the crown of Great Britain, that peace may be preserved among them, and justice impartially administered; so that we may be governed so as to render us useful to our mother country by encouraging us to make and raise such commodities as may be useful to Great Britain.

"But will anyone say that all or any of these good ends are to be effected by a governor's setting his people together by the ears, and by the assistance of one part of the people to plague and plunder the other? The commission that governors bear while they execute the powers given them according to the intent of the royal grantor requires and deserves very great reverence and submission. But when a governor departs from the duty enjoined on him by his sovereign, and acts as if he were less accountable than the royal hand that gave him all that power and honor that he is possessed of, this sets people upon examining and inquiring into the power, authority, and duty of such a magistrate, and to comparing those with his conduct. And just as far as they find he exceeds the bounds of his authority, or falls short in doing impartial justice to the people under his administration, so far they very often, in return, come short in their duty to such a governor.

"For power alone will not make a man beloved, and I have heard it observed that the man who was neither good nor wise before his being made a governor never mended upon his preferment, but has been generally observed to be worse. For men who are not imbued with wisdom and virtue can only be kept in bounds by the law; and by how much the further they think themselves out of the reach of the law, by so much the more wicked and cruel men are. I wish there were no instances of the kind at this day.

"Wherever this happens to be the case of a governor, unhappy are the people under his administration, and in the end he will find himself so too, for the people will neither love him nor support him.

"I make no doubt but there are those here who are zealously concerned for the success of this prosecution, and yet I hope they are not many; and even some of those, I am persuaded, when they consider to what lengths such prosecutions may be carried, and how deeply the liberties of the people may be affected by such means, will not all abide by their present sentiments. I say 'not all,' for the man who from an intimacy and acquaintance with a governor has conceived a personal regard for him, the man who has felt none of the strokes of his power, the man who believes that a governor has a regard for him and confides in him, it is natural for such men to wish well to the affairs of such a governor. And as they may be men of honor and generosity, may, and no doubt will, wish him success so far as the rights and privileges of their fellow citizens are not affected. But as men of honor I can apprehend nothing from them. They will never exceed that point.

"There are others that are under stronger obligations, and those are such as are in some sort engaged in support of the governor's cause by their own or their relations' dependence on his favor for some post or preferment. Such men have what is commonly called duty and gratitude to influence their inclinations and oblige them to go his lengths. I know men's interests are very near to them, and they will do much rather than forgo the favor of a governor and a livelihood at the same time. But I can with very just grounds hope, even from those men, whom I will suppose to be men of honor and conscience too, that when they see the liberty of their country in danger, either by their concurrence or even by their silence, they will like Englishmen,

and like themselves, freely make a sacrifice of any preferment or favor rather than be accessory to destroying the liberties of their country and entailing slavery upon their posterity.

"There are indeed another set of men, of whom I have no hopes. I mean such who lay aside all other considerations and are ready to join with power in any shape, and with any man or sort of men by whose means or interest they may be assisted to gratify their malice and envy against those whom they have been pleased to hate; and that for no other reason than because they are men of ability and integrity, or at least are possessed of some valuable qualities far superior to their own. But as envy is the sin of the Devil, and therefore very hard, if at all, to be repented of, I will believe there are but few of this detestable and worthless sort of men, nor will their opinions or inclinations have any influence upon this trial.

"But to proceed. I beg leave to insist that the right of complaining or remonstrating is natural; that the restraint upon this natural right is the law only; and that those restraints can only extend to what is false. For as it is truth alone that can excuse or justify any man for complaining of a bad administration, I as frankly agree that nothing ought to excuse a man who raises a false charge or accusation even against a private person, and that no manner of allowance ought to be made to him who does so against a public magistrate.

"Truth ought to govern the whole affair of libels. And yet the party accused runs risk enough even then; for if he fails in proving every title of what he has written, and to the satisfaction of the court and jury too, he may find to his cost that when the prosecution is set on foot by men in power it seldom wants friends to favor it.

"From thence (it is said) has arisen the great diversity of opinions among judges about what words were or were not scandalous or libelous. I believe it will be granted that there is not greater uncertainty in any part of the law than about words of scandal. It would be mispending of the Court's time to mention the cases. They may be said to be numberless. Therefore the utmost care ought to be taken in following precedents; and the times when the judgments were given, which are quoted for authorities in the case of libels, are much to be regarded.

"I think it will be agreed that ever since the time of the Star Chamber, where the most arbitrary judgments and opinions were given that ever an Englishman heard of, at least in his own country; I say, prosecutions for libel since the time of that arbitrary Court, and until the Glorious Revolution, have generally been set on foot at the instance of the crown or its ministers. And it is no small reproach to the law that these prosecutions were too often and too much countenanced by the judges, who held their places 'at pleasure,' a disagreeable tenure to any officer, but a dangerous one in the case of a judge. Yet I cannot think it unwarrantable to show the unhappy influence that a sovereign has sometimes had, not only upon judges, but even upon parliaments themselves.

"It has already been shown how the judges differed in their opinions about the nature of a libel in the case of the Seven Bishops.

"There you see three judges of one opinion, that is, of a wrong opinion in the judgment of the best men in England, and one judge of a right opinion. How unhappy might it have been for all of us at this day if that jury had understood the words in that information as the Court did? Or if they had left it to the Court to judge whether the petition of the Bishops was or was not a libel? No, they took upon them[selves]—to their immortal honor—to determine both law and fact, and to understand the petition of the Bishops to be no libel, that is, to contain no falsehood or sedition; and therefore found them not guilty.

"If then upon the whole there is so great an uncertainty among judges—learned and great men—in matters of this kind, if power has had so great an influence on judges, how cautious ought we to be in determining by their judgments especially in The Plantations, and in the case of libels?

"There is heresy in law as well as in religion, and both have changed very much. We well know that it is not two centuries ago that a man would have been burned as a heretic for owning such opinions in matters of religion as are publicly written and printed at this day. They were fallible men, it seems, and we take the liberty not only to differ from them in religious opinions, but to condemn them and their opinions too. I must presume that in taking these freedoms in thinking and speaking about matters of faith or religion, we are in the right; for although it is said that there are very great liberties of this kind taken in New York, yet I have heard of no information preferred by Mr. Attorney for any offenses of this sort. From which I think it is pretty clear that in New York a man may make very free with his God, but he must take a special care what he says of his governor.

"It is agreed upon by all men that this is a reign of liberty. While men keep within the bounds of truth I hope they may with safety both speak and write their sentiments of the conduct of men in power. I mean of that part of their conduct only which affects the liberty or property of the people under their administration. Were this to be denied, then the next step may make them slaves; for what notions can be entertained of slavery beyond that of suffering the greatest injuries and oppressions without the liberty of complaining, or if they do, to be destroyed, body and estate, for so doing?

"It is said and insisted on by Mr. Attorney that government is a sacred thing; that it is to be supported and revered; that it is government that protects our persons and estates, prevents treasons, murders, robberies, riots, and all the train of evils that overturns kingdoms and states and ruins particular persons. And if those in the administration, especially the supreme magistrate, must have all their conduct censured by private men, government cannot subsist. This is called a licentiousness not to be tolerated. It is said that it brings the rulers of the people into contempt, and their authority not to be regarded, and so in the end the laws cannot be put into execution.

"These, I say, and such as these, are the general topics insisted upon by men in power and their advocates. But I wish it might be considered at the same time how often it has happened that the abuse of power has been the primary cause of these evils, and that it was the injustice and oppression of these great men that has commonly brought them into contempt with the people. The craft and art of such men is great, and who that is the least acquainted with history or law can be ignorant of the specious pretenses that have often been made use of by men in power to introduce arbitrary rule, and to destroy the liberties of a free people?

"This is the second information for libeling of a governor that I have known in America. The first, although it may look like a romance, yet as it is true I will beg leave to mention it.

"Governor Nicholson, who happened to be offended with one of his clergy, met him one day upon the road; and as usual with him (under the protection of his commission) used the poor parson with the worst of language, and threatened to cut off his ears, slit his nose, and at last to shoot him through the head. The parson, being a reverend man, continued all this time uncovered in the heat of the sun, until he found an opportunity to fly for it. Coming to a neighbor's house, he felt himself very ill of a fever, and immediately writes for a doctor. And that his physician might the better judge of his distemper, he

acquainted him with the usage he had received; concluding that the Governor was certainly mad, for that no man in his senses would have behaved in that manner.

"The doctor unhappily showed the parson's letter. The Governor came to hear of it. And so an information was preferred against the poor man for saying he believed the Governor was mad. It was laid down in the information to be false, scandalous, and wicked, and written with intent to move sedition among the people, and to bring His Excellency into contempt. But by an order from the late Queen Anne there was a stop put to that prosecution, with sundry others set on foot by the same Governor against gentlemen of the greatest worth and honor in that government.

"And may not I be allowed, after all this, to say that by a little countenance almost anything that a man writes may, with the help of that useful term of art called an innuendo, be construed to be a libel, according to Mr. Attorney's definition of it—to wit, that whether the words are spoken of a person of a public character or of a private man, whether dead or living, good or bad, true or false, all make a libel. For according to Mr. Attorney, after a man hears a writing read, or reads and repeats it, or laughs at it, they are all punishable. It is true that Mr. Attorney is so good as to allow it must be after the party knows it to be a libel, but he is not so kind as to take the man's word for it.

"If a libel is understood in the large and unlimited sense urged by Mr. Attorney, there is scarce a writing I know that may not be called a libel, or scarce a person safe from being called to an account as a libeler. For Moses, meek as he was, libeled Cain; and who is it that has not libeled the Devil?

"For according to Mr. Attorney it is no justification to say that one has a bad name. Echard has libeled our good King William; Burnet has libeled, among others, King Charles and King James; and Rapin has libeled them all. How must a man speak or write; or what must he hear, read, or sing; or when must he laugh so as to be secure from being taken up as a libeler?"

"I sincerely believe that were some persons to go through the streets of New York nowadays and read a part of the Bible, if it was not known to be such, Mr. Attorney, with the help of his innuendos, would easily turn it into a libel. As for instance Isaiah 9:16: 'The leaders of the people cause them to err; and they that are led by them are destroyed.' Should Mr. Attorney go about to make this a libel, he would read it thus: 'The leaders of the people (innuendo, the Governor and Council of New York) cause them (innuendo, the people of this Province) to err, and they (the people of this Province meaning) that are led by them (the Governor and Council meaning) are destroyed (innuendo, are deceived into the loss of their liberty), which is the worst kind of destruction.'

"Or if some person should publicly repeat, in a manner not pleasing to his betters, the fourth and fifth verses of the 56th chapter of the same book, there Mr. Attorney would have a large field to display his skill in the artful application of his innuendos. The words are: 'His watchmen are blind, they are all ignorant, ... Yea, they are greedy dogs which can never have enough.' To make them a libel there is, according to Mr. Attorney's doctrine, no more wanting but the aid of his skill in the right adapting of his innuendos. As for instance: 'His watchmen (innuendo, the Governors Council and his Assembly) are blind, they are all ignorant (innuendo, will not see the dangerous designs of His Excellency). Yea, they (the Governor and Council meaning) are greedy dogs which can never have enough (innuendo, enough of riches and power).'

Such an instance as this seems only fit to be laughed at; but I appeal to Mr. Attorney himself whether these are not at least equally proper to be applied to His Excellency and his ministers as some of the inferences and innuendos in his information against my client. Then if Mr. Attorney is at liberty to come into court and file an information in the king's name, without leave, who is secure whom he is pleased to prosecute as a libeler

And give me leave to say that the mode of prosecuting by information, when a grand jury will not find a true bill, is a national grievance, and greatly inconsistent with that freedom that the subjects of England enjoy in most other cases. But if we are so unhappy as not to be able to ward off this stroke of power directly, yet let us take care not to be cheated out of our liberties by forms and appearances. Let us always be sure that the charge in the information is made out clearly even beyond a doubt; for although matters in the information may be called form [sic] upon trial, yet they may be, and often have been found to be, matters of substance upon giving judgment.

"Gentlemen: The danger is great in proportion to the mischief that may happen through our too great credulity. A proper confidence in a court is commendable, but as the verdict, whatever it is, will be yours, you ought to refer no part of your duty to the discretion of other persons. If you should be of the opinion that there is no falsehood in Mr. Zenger's papers, you will, nay pardon me for the expression, you ought, to say so—because you do not know whether others—I mean the Court—may be of that opinion. It is your right to do so, and there is much depending upon your resolution as well as upon your integrity.

"The loss of liberty, to a generous mind, is worse than death. And yet we know that there have been those in all ages who for the sake of preferment, or some imaginary honor, have freely lent a helping hand to oppress, nay to destroy, their country.

"This brings to my mind that saying of the immortal [Marcus] Brutus when he looked upon the creatures of Caesar, who were very great men but by no means good men. 'You Romans, said Brutus, 'if yet I may call you so, consider what you are doing. Remember that you are assisting Caesar to forge those very chains that one day he will make you yourselves wear.' This is what every man who values freedom ought to consider. He should act by judgment and not by affection or self-interest; for where those prevail, no ties of either country or kindred are regarded; as upon the other hand, the man who loves his country prefers its liberty to all other considerations, well knowing that without liberty life is a misery.

"A famous instance of this you will find in the history of another brave Roman of the same name, I mean Lucius Junius Brutus, whose story is well known, and therefore I shall mention no more of it than only to show the value he put upon the freedom of his country. After this great man, with his fellow citizens whom he had engaged in the cause, had banished Tarquin the Proud, the last king of Rome, from a throne that he ascended by inhuman murders and possessed by the most dreadful tyranny and proscriptions, and had by this means amassed incredible riches, even sufficient to bribe to his interest many of the young nobility of Rome to assist him in recovering the crown; the plot being discovered, the principal conspirators were apprehended, among whom were two of the sons of Junius Brutus. It was absolutely necessary that some should be made examples of, to deter others from attempting the restoration of Tarquin and destroying the liberty of Rome. To effect this it was that Lucius Junius Brutus, one of the consuls of Rome, in the presence of the Roman people, sat judge and condemned his own sons as traitors to their country. And to give the last proof of his exalted virtue and his love of liberty, he with a firmness of mind only becoming so great a man caused their heads to be struck off in his own presence. When he observed that his rigid virtue occasioned a sort of horror among the people, it is observed that he said only, 'My fellow citizens, do not think that this proceeds from any

want of natural affection. No, the death of the sons of Brutus can affect Brutus only. But the loss of liberty will affect my country.'

"Thus highly was liberty esteemed in those days, that a father could sacrifice his sons to save his country. But why do I go to heathen Rome to bring instances of the love of liberty? The best blood in Britain has been shed in the cause of liberty; and the freedom we enjoy at this day may be said to be in a great measure owing to the glorious stand the famous Hampden, and others of our countrymen, made against the arbitrary demands and illegal impositions of the times in which they lived; who, rather than give up the rights of Englishmen and submit to pay an illegal tax of no more, I think, than three shillings, resolved to undergo, and for the liberty of their country did undergo, the greatest extremities in that arbitrary and terrible Court of the Star Chamber, to whose arbitrary proceedings—it being composed of the principal men of the realm, and calculated to support arbitrary government—no bounds or limits could be set, nor could any other hand remove the evil but Parliament.

"Power may justly be compared to a great river. While kept within its due bounds it is both beautiful and useful. But when it overflows its banks, it is then too impetuous to be stemmed; it bears down all before it, and brings destruction and desolation wherever it comes. If, then, this is the nature of power, let us at least do our duty, and like wise men who value freedom use our utmost care to support liberty, the only bulwark against lawless power, which in all ages has sacrificed to its wild lust and boundless ambition the blood of the best men that ever lived.

"I hope to be pardoned, Sir, for my zeal upon this occasion. It is an old and wise caution that when our neighbor's house is on fire we ought to take care of our own. For though—blessed be God—I live in a government where liberty is well understood and freely enjoyed, yet experience has shown us all—I am sure it has to me—that a bad precedent in one government is soon set up for an authority in another. And therefore I cannot but think it my, and every honest man's, that while we pay all due obedience to men in authority we ought at the same time to be upon our guard against power wherever we apprehend that it may affect ourselves or our fellow subjects.

"I am truly very unequal to such an undertaking on many accounts. You see that I labor under the weight of many years, and am bowed down with great infirmities of body. Yet, old and weak as I am, I should think it my duty, if required, to go to the utmost part of the land where my services could be of any use in assisting to quench the flame of prosecutions upon informations, set on foot by the government to deprive a people of the right of remonstrating and complaining, too, of the arbitrary attempts of men in power."

"Men who injure and oppress the people under their administration provoke them to cry out and complain, and then make that very complaint the foundation for new oppressions and prosecutions. I wish I could say that there were no instances of this kind.

"But to conclude. The question before the Court and you, Gentlemen of the jury, is not of small or private concern. It is not the cause of one poor printer, nor of New York alone, which you are now trying. No! It may in its consequence affect every free man that lives under a British government on the main of America. It is the best cause. It is the cause of liberty. And I make no doubt but your upright conduct this day will not only entitle you to the love and esteem of your fellow citizens, but every man who prefers freedom to a life of slavery will bless and honor you as men who have baffled the attempt of tyranny, and by an impartial and uncorrupt verdict have laid a noble foundation for securing to ourselves, our posterity, and our neighbors, that to which nature and the laws of our country have given us a right to liberty of both exposing and opposing arbitrary power (in these parts of the world at least) by speaking and writing truth."

Court's Instruction to Jury

Mr. Chief Justice: "Gentlemen of the Jury: The great pains Mr. Hamilton has taken to show how little regard juries are to pay to the opinion of judges, and his insisting so much upon the conduct of some judges in trials of this kind, is done no doubt with a design that you should take but very little notice of what I might say upon this occasion. I shall therefore only observe to you that as the facts or words in the information are confessed, the only thing that can come in question before you is whether the words as set forth in the information make a libel. And that is a matter of law, no doubt, and which you may leave to the Court."

Mr. Hamilton: "I humbly beg Your Honor's pardon, I am very much misapprehended if you suppose that what I said was so designed.

"Sir, you know I made an apology for the freedom that I found myself under a necessity of using upon this occasion. I said there was nothing personal designed. It arose from the nature of our defense."

The Verdict

The jury withdrew to begin deliberations, but quickly returned with their verdict. Asked by the clerk whether whether John Peter Zenger was guilty of printing and publishing the libels in the information, Thomas Hunt, the jury foreman replied: "Not guilty."

Maxims from Poor Richard's Almanack (1739)

One of the most popular and enduring works to emerge from the colonial era was Benjamin Franklin's *Poor Richard's Almanack*. Read by all classes in society, some 10,000 copies of the *Almanack* were published annually from 1732 to 1757. All enjoyed the *Almanack* for its wit and common sense. Many of its adages, such as those quoted here, are still familiar today.

When Death puts out our Flame, the Snuff will tell,

If we were Wax, or Tallow by the Smell.
 At a great Pennyworth, pause a while.
 As to his Wife, John minds St. Paul. He's one
 That hath a Wife, and is as if he'd none.
 Kings a be an Honour to them tho' they are dead.
 If thou wouldst live long, live well; for Folly and Wickedness shorten Life.
 Prythee isn't Miss Cloe's a comical Case?
 She lends out her Tail, and she borrows her Face.
 Trust thy self, and another shall not betray thee.
 He that pays for Work before it's done, has but a pennyworth for twopence.
 Historians relate, not so much what is done, as what they would have believed.
 O Maltster! break that cheating Peck; 'tis plain,
 When e'er you use it, you're a Knave in Grain ...
 Grace thou thy House, and let not that grace thee.
 Thou canst not joke an Enemy into a Friend; but thou may'st a Friend into an Enemy.
 Eyes & Priests
 Bear no Jests.
 He that falls in love with himself, will have no Rivals.
 Let thy Child's first Lesson be Obedience, and the second may be what thou wilt.
 Blessed is he that expects nothing, for he shall never be disappointed.
 Rather go to bed supperless, than run in debt for a
 Breakfast.
 Let thy Discontents be Secrets.
 An infallible Remedy for the Tooth-ach, viz Wash the Root of an aching Tooth, in Elder Vinegar, and let it dry half an hour in the Sun; after
 which it will never ach more; Probatum est [it is proved].
 A Man of Knowledge like a rich Soil, feeds
 If not a world of Corn, a world of Weeds.
 A modern Wit is one of David's Fools.
 No Resolution of Repenting hereafter, can be sincere.
 Pollio, who values nothing that's within,
 Buys books as men hunt Beavers,—for their Skin.
 Honour thy Father and Mother, i.e. Live so as to be an
 Honour to them tho' they are dead.
 If thou injurest Conscience, it will have its Revenge on thee.
 Hear no ill of a Friend, nor speak any of an Enemy.
 Pay what you owe, and you'll know what's your own.
 Be not niggardly of what costs thee nothing, as courtesy, counsel, & countenance.
 Thirst after Desert, not Reward.
 Beware of him that is slow to anger: He is angry for something, and will not be pleased for nothing.
 No longer virtuous no longer free; is a Maxim as true with regard to a private Person as a Common-wealth.
 When Man and Woman die, as Poets sung,
 His Heart's the last part moves, her last, the tongue.
 Proclaim not all thou knowest, all thou owest, all thou hast, nor all thou canst.
 Let our Fathers and Grandfathers be valued for their Goodness, ourselves for our own.
 Industry need not wish.
 Sin is not hurtful because it is forbidden but it is forbidden because it's hurtful. Nor is a Duty beneficial because it is commanded, but it is
 commanded, because it's beneficial.
 A——, they say, has Wit; for what?
 For writing?—
 No; For writing not.
 George came to the Crown without striking a Blow.
 Ah! quoth the Pretender, would I could do so.
 Love, and be lov'd.
 O Lazy-Bones! Dost thou think God would have given thee
 Arms and Legs, if he had not design'd thou should'st use them.
 A Cure for Poetry,
 Seven wealthy Towns contend for Homer, dead,
 Thro' which the living Homer beg'd his Bread.
 Great Beauty, great strength, & great Riches, are really & truly of no great Use; a right Heart exceeds all.

The Demand for Slavery in Georgia (1743)

Slavery was originally outlawed in Georgia in 1735. Many of its settlers demanded in 1743 that it be allowed in order to stem "want and famine." Following is an excerpt from their petition.

The Trustees for Establishing the Colony of Georgia in America opposed the demand for slavery. By 1749, however, they relented and, out of what was considered economic necessity, rescinded the slavery ban in early 1750.

But as if the difficulties arising from indifferent lands, and discouraging tenures, were not sufficient to humble and prepare them for the other severities they have met with, they were totally prohibited the importation, use, or even sight of negroes. In spite of all endeavors to disguise this point, it is as clear as light itself, that negroes are essentially necessary to the cultivation of Georgia, as axes, hoes, or any other utensil of agriculture. So that if a colony was designed able to but to subsist itself, their prohibition was inconsistent; if a garrison only was intended, the very inhabitants were needless: but all circumstances considered, it looked as if the assistance of human creatures, who have been called slaves, as well as subject to the treatment of such, were incongruous with a system that proceeded to confer the thing, but to spare the odium of the appellation. Experience would too soon have taught them the parity of their conditions, in spite of a mere nominal difference. The only English clergymen, who were ever countenanced there, declared they never desired to see Georgia a rich, but a godly colony; and the blind subjection the poor Saltzburger are under to the Rev. Mr. Boltzius, who has furnished such extraordinary extracts in some accounts of Georgia, published here, will be too evident from some of the annexed depositions to call for any descant.

The pretended content and satisfaction of the people of Ebenezer, without negroes, will plainly appear to be the dictates of spiritual tyranny, and only the wretched acquiescence of people, who were in truth unacquainted with the privilege of choosing for themselves.

It is acknowledged indeed that the present war, and late invasion, may furnish the enemies of the colony with the most plausible objections that could occur, against the allowance of black slaves; but these reasons have not always existed, nor have the trustees ever declared any resolution to admit them, at any other juncture. But if it plainly appears that Georgia, as a colony, cannot barely exist without them, surely an admission of them under limitations, suitable to the present situation of affairs, is absolutely necessary to its support; since want and famine must be more dreadful and insuperable invaders, than any living enemy: besides, the honorable trustees were informed by a letter from Mr. Stirling and others, of the falsehood, of the contended and comfortable situation of the people of Darien were affirmed to be in; and that they were brought with a number of cattle, and extensive promises of future rewards, when they signed their petition against negroes....

Rules of Civility & Decent Behaviour in Company and Conversation (c. 1744)

As a schoolboy of 14, George Washington copied maxims on proper behavior from an early French text ("Bienseance de la conversation entre les Hommes," prepared in 1595), which had been adapted and translated into English. It is thought that this exercise was a formative influence on Washington, who was known in later life as a gentleman of impeccable manners and rectitude.

1st. Every Action done in Company, ought to be with Some Sign of Respect, to those that are Present.

2d. When in Company, put not your Hands to any Part of the Body, not usualy Discovered.

3d. Shew Nothing to your Freind that may affright him.

4[d]. In the Presence of Others Sing not to yourself with a humming Noise, nor Drum with your Fingers or Feet.

5th. If You Cough, Sneeze, Sigh, or Yawn, do it not Loud but Privately; and Speak not in your Yawning, but put Your handkercheif or Hand before your face and turn aside.

6th. Sleep not when others Speak, Sit not when others stand, Speak not when you Should hold your Peace, walk not on when others Stop.

7th. Put not off your Cloths in the presence of Others, nor go out your Chamber half Drest.

8th. At Play and at Fire its Good manners to Give Place to the last Commer, and affect not to Speak Louder than Ordinary.

9th. Spit not in the Fire, nor Stoop low before it neither Put your Hands into the Flames to warm them, nor Set your Feet upon the Fire especially if there be meat before it.

10th. When you Sit down, Keep your Feet firm and Even, without putting one on the other or Crossing them.

11th. Shift not yourself in the Sight of others nor Gnaw your nails.

12th. Shake not the head, Feet, or Legs rowl not the Eys lift not one eyebrow higher than the other wry not the mouth, and bedew no mans face with your Spittle, by appr[oothing too nea]r him [when] you Speak.

- 13th. Kill no Vermin as Fleas, lice ticks &c in the Sight of Others, if you See any filth or thick Spittle put your foot Dexteriously upon it, if it be upon the Cloths of your Companions, Put it off privately, and if it be upon your own Cloths return Thanks to him who puts it off.
- 14th. Turn not your Back to others especially in Speaking, Jog not the Table or Desk on which Another reads or writes, lean not upon any one.
- 15th. Keep your Nails clean and Short, also your Hands and Teeth Clean yet without Shewing any great Concern for them.
- 16th. Do not Puff up the Cheeks, Loll not out the tongue rub the Hands, or beard, thrust out the lips, or bite them or keep the Lips too open or too Close.
- 17th. Be no Flatterer, neither Play with any that delights not to be Play'd Withal.
- 18th. Read no Letters, Books, or Papers in Company but when there is a Necessity for the doing of it you must ask leave: come not near the Books or Writings of Another so as to read them unless desired or give your opinion of them unask'd, also look not nigh when another is writing a Letter.
- 19th. Let your Countenance be pleasant but in Serious Matters Somewhat grave.
- 20th. The Gestures of the Body must be Suited to the discourse you are upon.
- 21st. Reproach none for the Infirmitates of Nature, nor Delight to Put them that have in mind thereof.
- 22d. Shew not yourself glad at the Misfortune of another though he were your enemy.
- 23d. When you see a Crime punished, you may be inwardly Pleased; but always shew Pity to the Suffering Offender.
- [24th. Do not laugh too loud or] too much at any Publick [Spectacle].
- 25th. Superfluous Complements and all Affectation of Ceremonie are to be avoided, yet where due they are not to be Neglected.
- 26th. In Pulling off your Hat to Persons of Distinction, as Noblemen, Justices, Churchmen &c make a Reverence, bowing more or less according to the Custom of the Better Bred, and Quality of the Person. Amongst your equals expect not always that they Should begin with you first, but to Pull off the Hat when there is no need is Affectation; in the Manner of Saluting and resaluting in words keep to the most usual Custom.
- 27th. Tis ill manners to bid one more eminent than yourself be covered as well as not to do it to whom it's due, Likewise he that makes too much haste to Put on his hat does not well, yet he ought to Put it on at the first, or at most the Second time of being ask'd; now what is herein Spoken, of Qualification in behaviour in Saluting, ought also to be observed in taking of Place, and Sitting down for ceremonies without Bounds is troublesome.
- 28th. If any one come to Speak to you while you are Sitting, Stand up tho he be your Inferiour, and when you Present Seats let it be to every one according to his Degree.
- 29th. When you meet with one of Greater Quality than yourself, Stop, and retire especially if it be at a Door or any Straight place to give way for him to Pass.
- 30th. In walking the highest Place in most Countrys Seems to be on the right hand therefore Place yourself on the left of him whom you desire to Honour: but if three walk together the mid[dest] Place is the most Honourable the wall is usually given to the most worthy if two walk together.
- 31st. If any one far Surpassess others, either in age, Estate, or Merit [yet] would give Place to a meaner than hims[elf] in his own lodging or elsewhere] the one ought not to except it, S[o he on the other part should not use much earnestness nor offer] it above once or twice.
- 32d. To one that is your equal, or not much inferior you are to give the chief Place in your Lodging and he to who 'tis offered ought at the first to refuse it but at the Second to accept though not without acknowledging his own unworthiness.
- 33d. They that are in Dignity or in office have in all places Precedency but whilst they are Young they ought to respect those that are their equals in Birth or other Qualities, though they have no Publick charge.
- 34th. It is good Manners to prefer them to whom we Speak befo[re] ourselves especially if they be above us with whom in no Sort we ought to begin.
- 35th. Let your Discourse with Men of Business be Short and Comprehensive.
- 36th. Artificers & Persons of low Degree ought not to use many ceremonies to Lords, or Others of high Degree but Respect and high[ly] Honour them, and those of high Degree ought to treat them with affability & Courtesie, without Arrogancy.
- 37th. In Speaking to men of Quality do not lean nor Look them full in the Face, nor approach too near them, at lest Keep a full Pace from them.
- 38th. In visiting the Sick, do not Presently play the Physicion if you be not Knowing therein.
- 39th. In writing or Speaking, give to every Person his due Title According to his Degree & the Custom of the Place.
- 40th. Strive not with your Superiers in argument, but always Submit your Judgment to others with Modesty.
- 41st. Undertake not to Teach your equal in the art himself Proffesses; it Savours of arrogancy.
- [42d. Let thy ceremonies in] Courtesie be proper to the Dignity of his place [with whom thou conversest for it is absurd to ac]t the same with a Clown and a Prince.
- 43d. Do not express Joy before one sick or in pain for that contrary Passion will aggravate his Misery.

44th. When a man does all he can though it Succeeds not well, blame not him that did it.

45th. Being to advise or reprehend any one, consider whether it ought to be in publick or in Private; presently, or at Some other time in what terms to do it & in reproving Shew no Sign of Cholar but do it with all Sweetness and Mildness.

46th. Take all Admonitions thankfully in what Time or Place So ever given but afterwards not being culpable take a Time [&] Place convenient to let him know it that gave them.

[4]7th. Mock not nor Jest at any thing of Importance, break [n]o Jest that are Sharp Biting and if you Deliver any thing witty and Pleasent, abstain from Laughing thereat yourself.

48th. Wherein you reprove Another be unblameable yourself; for example is more prevalent than Precepts.

[4]9[th]. Use no Reproachfull Language against any one, neither Curse nor Revile.

[5]0th. Be not hasty to believe flying Reports to the Disparag[e]ment of any.

51st. Wear not your Cloths, foul, unript or Dusty but See they be Brush'd once every day at least and take heed tha[t] you approach not to any Uncleaness.

52d. In your Apparel be Modest and endeavour to accomodate Nature, rather than to procure Admiration keep to the Fashio[n] of your equals Such as are Civil and orderly with respect to Times and Places.

53d. Run not in the Streets, neither go t[oo s]lowly nor wit[h] Mouth open go not Shaking yr Arms [kick not the earth with yr feet, go] not upon the Toes, nor in a Dancing [fashion].

54th. Play not the Peacock, looking every where about you, to See if you be well Deck't, if your Shoes fit well if your Stokings sit neatly, and Cloths handsomely.

55th. Eat not in the Streets, nor in the House, out of Season.

56th. Associate yourself with Men of good Quality if you Esteem your own Reputation; for 'tis better to be alone than in bad Company.

57th. In walking up and Down in a House, only with One in Compan[y] if he be Greater than yourself, at the first give him the Right hand and Stop not till he does and be not the first that turns, and when you do turn let it be with your face towards him, if he be a Man of Great Quality, walk not with him Cheek by Joul but Somewhat behind him; but yet in Such a Manner that he may easily Speak to you.

58th. Let your Conversation be without Malice or Envy, for 'tis a Sig[n o]f a Tractable and Commendable Nature: And in all Causes of Passion [ad]mit Reason to Govern.

59th. Never express anything unbecoming, nor Act agst the Rules Mora[l] before your inferiours.

60th. Be not immodest in urging your Freinds to Discover a Secret.

61st. Utter not base and frivolous things amongst grave and Learn'd Men nor very Difficult Questions or Subjects, among the Ignorant or things hard to be believed, Stuff not your Discourse with Sentences amongst your Betters nor Equals.

62d. Speak not of doleful Things in a Time of Mirth or at the Table; Speak not of Melancholy Things as Death and Wounds, and if others Mention them Change if you can the Discourse tell not your Dreams, but to your intimate Friend.

63d. A Man o[ug]ht not to value himself of his Atchievements, or rare Qua[lities of wit; much less of his rich]es Virtue or Kindred.

64th. Break not a Jest where none take pleasure in mirth Laugh not aloud, nor at all without Occasion, deride no mans Misfortune, tho' there Seem to be Some cause.

65th. Speak not injurious Words neither in Jest nor Earnest Scoff at none although they give Occasion.

66th. Be not forward but friendly and Courteous; the first to Salute hear and answer & be not Pensive when it's a time to Converse.

67th. Detract not from others, neither be excessive in Commanding.

68th. Go not thither, where you know not, whether you Shall be Welcome or not. Give not Advice with[out] being Ask'd & when desired [d]o it briefly.

[6]9[th]. If two contend together take not the part of either unconstrain[ed]; and be not obstinate in your own Opinion, in Things indiferent be of the Major Side.

70th. Reprehend not the imperfections of others for that belong[s] to Parents Masters and Superiours.

71st. Gaze not on the marks or blemishes of Others and ask not how they came. What you may Speak in Secret to your Friend deliver not before others.

72d. Speak not in an unknown Tongue in Company but in your own Language and that as those of Quality do and not as the Vulgar; Sublime matters treat Seriously.

73d. Think before you Speak pronounce not imperfectly nor bring ou[t] your Words too hastily but orderly & distinctly.

74th. When Another Speaks be attentive your Self and disturb not the Audience if any hesitate in his Words help him not nor Prompt him without desired, Interrupt him not, nor Answer him till his Speec[h] be ended.

75th. In the midst of Discourse ask [not of what one treateth] but if you Perceive any Stop because of [your coming you may well intreat him gently] to Proceed: If a Person of Quality comes in while your Conversing it's handsome to Repeat what was said before.

76th. While you are talking, Point not with your Finger at him of Whom you Discourse nor Approach too near him to whom you talk especially to his face.

77th. Treat with men at fit Times about Business & Whisper not in the Company of Others.

78th. Make no Comparisons and if any of the Company be Commended for any brave act of Vertue, commend not another for the Same.

79th. Be not apt to relate News if you know not the truth thereof. In Discoursing of things you Have heard Name not your Author always A [Se]cret Discover not.

80th. Be not Tedious in Discourse or in reading unless you find the Company pleased therewith.

81st. Be not Curious to Know the Affairs of Others neither approach those that Speak in Private.

82d. Undertake not what you cannot Perform but be Carefull to keep your Promise.

83d. When you deliver a matter do it without Passion & with Discretion, howev[er] mean the Person be you do it to.

84th. When your Superiours talk to any Body hearken not neither Speak nor Laugh.

85th. In Company of these of Higher Quality than yourself Speak not ti[l] you are ask'd a Question, then Stand upright put of your Hat & Answer in few words.

86[th]. In Disputes, be not So Desireous to Overcome as not to give Liberty to each one to deliver his Opinion and Submit to the Judgment of the Major Part especially if they are Judges of the Dispute.

[87th. Let thy carriage be such] as becomes a Man Grave Settled and attentive [to that which is spoken. Contra]dict not at every turn what others Say.

88th. Be not tedious in Discourse, make not many Digressions, nor rep[eat] often the Same manner of Discourse.

89th. Speak not Evil of the absent for it is unjust.

90[th]. Being Set at meat Scratch not neither Spit Cough or blow your Nose except there's a Necessity for it.

91st. Make no Shew of taking great Delight in your Victuals, Feed no[t] with Greediness; cut your Bread with a Knife, lean not on the Table, neither find fault with what you Eat.

92[d]. Take no Salt or cut Bread with your Knife Greasy.

93[d]. Entertaining any one at table it is decent to present him wt. meat, Undertake not to help others undesired by the Master.

[9]4th. If you Soak bread in the Sauce let it be no more than what you [pu]t in your Mouth at a time and blow not your broth at Table [bu]t Stay till Cools of it Self.

[95]th. Put not your meat to your Mouth with your Knife in your ha[nd ne]ither Spit forth the Stones of any fruit Pye upon a Dish nor Cas[t an]ything under the table.

[9]6[th]. It's unbecoming to Stoop much to ones Meat, Keep your Fingers clea[n &] when foul wipe them on a Corner of your Table Napkin.

[97]th. Put not another bit into your Mouth 'til the former be Swallowed [I]et not your Morsels be too big for the Gowls.

98th. Drink not nor talk with your mouth full, neither Gaze about you while you are a Drinking.

99th. Drink not too leisurely nor yet too hastily. Before and after Drinking wipe your Lips breath not then or Ever with too Great a Noise, for its uncivil.

100[th]. Cleanse not your teeth with the Table Cloth Napkin Fork or Knife but if Others do it let it be done wt. a Pick Tooth.

101st. Rince not your Mouth in the Presence of Others.

102d. It is out of use to call upon the Company often to Eat nor need you Drink to others every Time you Drink.

103d. In Company of your Betters be no[t longer in eating] than they are, lay not your Arm but o[nly your hand upon the table].

104th. It belongs to the Chiefest in Company to unfold his Napkin and fall to Meat first, But he ought then to Begin in time & to Dispatch [w]ith Dexterity that the Slowest may have time allowed him.

[1]05th. Be not Angry at Table whatever happens & if you have reason to be so, Shew it not but on a Chearfull Countenance especially if there be Strangers for Good Humour makes one Dish of Meat a Feas[t].

[1]06th. Set not yourself at the upper of the Table but if it Be your Due or that the Master of the house will have it So, Contend not, least you Should Trouble the Company.

107th. If others talk at Table be attentive but talk not with Meat in your Mouth.

108th. When you Speak of God or his Atributes, let it be Seriously & [wt.] Reverence. Honour & Obey your Natural Parents altho they be Poor.

109th. Let your Recreations be Manfull not Sinfull.

110th. Labour to keep alive in your Breast that Little Spark of Ce[les]tial fire Called Conscience.

Advice to a Young Tradesman (1748)

In the following letter, Benjamin Franklin, a self-made man, known for his industry and common sense, gives sound advice to a young man beginning his career. No doubt, Franklin drew upon his own experiences of time and money management.

TO MY FRIEND, A. B.:

As you have desired of me, I write the following hints, which have been of service to me, and may, if observed, be so to you.

Remember that time is money. He that can earn ten shillings a day by his labour and goes abroad or sits idle one-half of that day, though he spends but sixpence during his diversion or idleness, ought not to reckon that the only expense; he has really spent, or rather thrown away, five shillings besides.

Remember that credit is money. If a man lets his money lie in my hands after it is due, he gives me the interest, or so much as I can make of it during that time. This amounts to a considerable sum where a man has good and large credit and makes good use of it.

Remember that money is of the prolific, generating nature. Money can beget money, and its offspring can beget more, and so on. Five shillings turned is six; turned again it is seven and threepence, and so on till it becomes a hundred pounds. The more there is of it the more it produces every turning, so that the profits rise quicker and quicker. He that kills a breeding sow destroys all her offspring to the thousandth generation. He that murders a crown destroys all that might have produced even scores of pounds.

Remember that six pounds a year is but a groat a day. For this little sum (which may be daily wasted either in time or expense unperceived) a man off credit may, on his own security, have the constant possession and use of a hundred pounds. So much in stock briskly turned by an industrious man produces great advantage.

Remember this saying, "The good paymaster is lord of another man's purse." He that is known to pay punctually and exactly to the time he promises may at any time and on any occasion raise all the money his friends can spare. This is sometimes of great use. After industry and frugality, nothing contributes more to the raising of a young man in the world than punctuality and justice in all his dealings; therefore never keep borrowed money an hour beyond the time you promised, lest a disappointment shut up your friend's purse for ever.

The most trifling actions that affect a man's credit are to be regarded. The sound of your hammer at five in the morning or nine at night heard by a creditor makes him easy six months longer, but if he sees you at a billard-table or hears your voice at a tavern, when you should be at work, he sends for his money the next day; demands it, before he can receive it, in a lump.

It shows, besides, that you are mindful of what you owe; it makes you appear a careful as well as an honest man, and that still increases your credit.

Beware of thinking all your own that you possess and of living accordingly. It is a mistake that many people who have credit fall into. To prevent this, keep an exact account for some time, both of your expenses and your income. If you take the pains at first to mention particulars, it will have this good effect: you will discover how wonderfully small, trifling expenses mount up to large sums, and will discern what might have been and may for the future be saved without occasioning any great inconvenience.

In short, the way to wealth, if you desire it, is as plain as the way to market. It depends chiefly on two words, industry and frugality; that is, waste neither time nor money, but make the best use of both. Without industry and frugality nothing will do, and with them everything. He that gets all he can honestly and saves all he gets (necessary expenses excepted), will certainly become rich, if that Being who governs the world, to whom all should look for a blessing on their honest endeavours, doth not, in his wise providence, otherwise determine.

AN OLD TRADESMAN.

Gottlieb Mittelberger on Immigration to the Colonies (c. 1750)

In the mid-18th century, the German pastor Gottlieb Mittelberger investigated the immigration of his countrymen to Pennsylvania. His report gave a vivid account of the hardships of travel, the unsanitary conditions, and the large numbers of deaths. In addition, the burden of payment for the trip bound many into work indentures.

Upon his return to Germany, Mittelberger published his findings to dispel the illusions of many immigrants and to alert others as to what fate awaited them. Below is a selection from this publication.

Both in Rotterdam and in Amsterdam the people are packed densely, like herrings so to say, in the large sea-vessels. One person receives a place of scarcely 2 feet width and 6 feet length in the bedstead, while many a ship carries four to six hundred souls; not to mention the innumerable implements, tools, provisions, water-barrels and other things which likewise occupy much space.

On account of contrary winds it takes the ships sometimes 2, 3 and 4 weeks to make the trip from Holland to ... England. But when the wind is good, they get there in 8 days or even sooner. Everything is examined there and the custom-duties paid, whence it comes that the ships ride there 8, 10 to 14 days and even longer at anchor, till they have taken in their full cargoes. During that time every one is compelled to spend his last remaining money and to consume his little stock of provisions which had been reserved for the sea; so that most passengers, finding themselves on the ocean where they would be in greater need of them, must greatly suffer from hunger and want. Many suffer want already on the water between Holland and Old England.

When the ships have for the last time weighed their anchors near the city of Kaupp [Coves] in Old England, the real misery begins with the long voyage. For from there the ships, unless they have good wind, must often sail 8, 9, 10 to 12 weeks before they reach Philadelphia. But even with the best wind the voyage lasts 7 weeks.

But during the voyage there is on board these ships terrible misery, stench, fumes, horror, vomiting, many kinds of sea-sickness, fever, dysentery, headache, heat, constipation, boils, scurvy, cancer, mouth-rot, and the like, all of which come from old and sharply salted food and meat, also from very bad and foul water, so that many die miserably.

Add to this want of provisions, hunger, thirst, frost, heat, dampness, anxiety, want, afflictions and lamentations, together with other trouble, as ... the lice abound so frightfully, especially on sick people, that they can be scraped off the body. The misery reaches the climax when a gale rages for 2 or 3 nights and days, so that every one believes that the ship will go to the bottom with all human beings on board. In such a visitation the people cry and pray most piteously.

When in such a gale the sea rages and surges, so that the waves rise often like high mountains one above the other, and often tumble over the ship, so that one fears to go down with the ship; when the ship is constantly tossed from side to side by the storm and waves, so that no one can either walk, or sit, or lie, and the closely packed people in the berths are thereby tumbled over each other, both the sick and the well—it will be readily understood that many of these people, none of whom had been prepared for hardships, suffer so terribly from them that they do not survive it.

I myself had to pass through a severe illness at sea, and I best know how I felt at the time. These poor people often long for consolation, and I often entertained and comforted them with singing, praying and exhorting; and whenever it was possible and the winds and waves permitted it, I kept daily prayer-meetings with them on deck. Besides, I baptized five children in distress, because we had no ordained minister on board. I also held divine service every Sunday by reading sermons to the people; and when the dead were sunk in the water, I commended them and our souls to the mercy of God.

Among the healthy, impatience sometimes grows so great and cruel that one curses the other, or himself and the day of his birth, and sometimes come near killing each other. Misery and malice join each other, so that they cheat and rob one another. One always reproaches the other with having persuaded him to undertake the journey. Frequently children cry out against their parents, husbands against their wives and wives against their husbands, brothers and sisters, friends and acquaintances against each other. But most against the soul-traffickers.

Many sigh and cry: "Oh, that I were at home again, and if I had to lie in my pig-sty!" Or they say: "O God, if I only had a piece of good bread, or a good fresh drop of water." Many people whimper, sigh and cry piteously for their homes; most of them get home-sick. Many hundred people necessarily die and perish in such misery, and must be cast into the sea, which drives their relatives, or those who persuaded them to undertake the journey, to such despair that it is almost impossible to pacify and console them.

No one can have an idea of the sufferings which women in confinement have to bear with their innocent children on board these ships. Few of this class escape with their lives; many a mother is cast into the water with her child as soon as she is dead. One day, just as we had a heavy gale, a woman in our ship, who was to give birth and could not give birth under the circumstances, was pushed through a loop-hole [port-hole] in the ship and dropped into the sea, because she was far in the rear of the ship and could not be brought forward.

Children from 1 to 7 years rarely survive the voyage. I witnessed misery in no less than 32 children in our ship, all of whom were thrown into the sea. The parents grieve all the more since their children find no resting-place in the earth, but are devoured by the monsters of the sea....

That most of the people get sick is not surprising, because, in addition to all other trials and hardships, warm food is served only three times a week, the rations being very poor and very little. Such meals can hardly be eaten, on account of being so unclean. The water which is served out on the ships is often very black, thick and full of worms, so that one cannot drink it without loathing, even with the greatest thirst. Toward the end we were compelled to eat the ship's biscuit which had been spoiled long ago; though in a whole biscuit there was scarcely a, piece the size of a dollar that had not been full of red worms and spiders nests....

At length, when, after a long and tedious voyage, the ships come in sight of land, so that the promontories can be seen, which the people were so eager and anxious to see, all creep from below on deck to see the land from afar, and they weep for joy, and pray and sing, thanking and praising God. The sight of the land makes the people on board the ship, especially the sick and the half dead, alive again, so that their hearts leap within them; they shout and rejoice, and are content to bear their misery in patience, in the hope that they may soon reach the land in safety. But alas!

When the ships have landed at Philadelphia after their long voyage, no one is permitted to leave them except those who pay for their passage or can give

good security; the others, who cannot pay, must remain on board the ships till they are purchased, and are released from the ships by their purchasers. The sick always fare the worst, for the healthy are naturally preferred and purchased first; and so the sick and wretched must often remain on board in front of the city for 2 or 3 weeks, and frequently die, whereas many a one, if he could pay his debt and were permitted to leave the ship immediately, might recover and remain alive....

The sale of human beings in the market on board the ship is carried on thus: Every day Englishmen, Dutchmen and High-German people come from the city of Philadelphia and other places, in part from a great distance, say 20, 30, or 40 hours away, and go on board the newly arrived ship that has brought and offers for sale passengers from Europe, and select among the healthy persons such as they deem suitable for their business, and bargain with them how long they will serve for their passage money, which most of them are still in debt for. When they have come to an agreement, it happens that adult persons bind themselves in writing to serve 3, 4, 5 or 6 years for the amount due by them, according to their age and strength. But very young people, from 10 to 15 years, must serve till they are 21 years old.

Many parents must sell and trade away their children like so many head of cattle; for if their children take the debt upon themselves, the parents can leave the ship free and unrestrained; but as the parents often do not know where and to what people their children are going, it often happens that such parents and children, after leaving the ship, do not see each other again for many years, perhaps no more in all their lives....

It often happens that whole families, husband, wife, and children, are separated by being sold to different purchasers, especially when they have not paid any part of their passage money.

When a husband or wife has died at sea, when the ship has made more than half of her trip, the survivor must pay or serve not only for himself or herself, but also for the deceased.

When both parents have died over half-way at sea, their children, especially when they are young and have nothing to pawn or to pay, must stand for their own and their parents' passage, and serve till they are 21 years old. When one has served his or her term, he or she is entitled to a new suit of clothes at parting; and if it has been so stipulated, a man gets in addition a horse, a woman, a cow.

When a serf has an opportunity to marry in this country, he or she must pay for each year which he or she would have yet to serve, 5 to 6 pounds. But many a one who has thus purchased and paid for his bride, has subsequently repented his bargain, so that he would gladly have returned his exorbitantly dear ware, and lost the money besides.

If some one in this country runs away from his master, who has treated him harshly, he cannot get far. Good provision has been made for such cases, so that a runaway is soon recovered. He who detains or returns a deserter receives a good reward.

If such a runaway has been away from his master one day, he must serve for it as a punishment a week, for a week a month, and for a month half a year....

Captivity Narrative of Mary Jemison in the 1750s (pub. 1824)

During the French and Indian War, Mary Jemison was captured by Native Americans when she was some 15 years of age. Having lost her family and home during the raid, she feared for her life as she was taken to the Ohio frontier. It was customary for Seneca Indians who lost kin during battle to exact revenge by killing the enemy or to adopt a captive as a replacement for their lost family member. Mary Jemison, fortunately, was adopted by her captors.

Although she was illiterate, Jemison's story was captured in an interview by James Seaver in the 1820s and published in 1824. Her narrative describes the daily life of indigenous peoples, their family roles, and character.

Chapter 3.

The night was spent in gloomy forebodings. What the result of our captivity would be, it was out of our power to determine, or even imagine. At times, we could almost realize the approach of our masters to butcher and scalp us; again, we could nearly see the pile of wood kindled on which we were to be roasted; and then we would imagine ourselves at liberty, alone and defenseless in the forest, surrounded by wild beasts that were ready to devour us. The anxiety of our minds drove sleep from our eyelids; and it was with a dreadful hope and painful impatience that we waited for the morning to determine our fate.

The morning at length arrived, and our masters came early and let us out of the house, and gave the young man and boy to the French, who immediately took them away. Their fate I never learned, as I have not seen nor heard of them since.

I was now left alone in the fort, deprived of my former companions, and of every thing that was near or dear to me but life. But it was not long before I was in some measure relieved by the appearance of two pleasant looking squaws, of the Seneca tribe, who came and examined me attentively for a short time, and then went out. After a few minutes' absence, they returned in company with my former masters, who gave me to the squaws to dispose of as they pleased.

The Indians by whom I was taken were a party of Shawnees, if I remember right, that lived, when at home, a long distance down the Ohio.

My former Indian masters and the two squaws were soon ready to leave the fort, and accordingly embarked—the Indians in a large canoe, and the two squaws and myself in a small one—and went down the Ohio. When we set off, an Indian in the forward canoe took the scalps of my former friends, strung them on a pole that he placed upon his shoulder, and in that manner carried them, standing in the stern of the canoe directly before us, as we sailed down the river, to the town where the two squaws resided.

On the way we passed a Shawnee town, where I saw a number of heads, arms, legs, and other fragments of the bodies of some white people who had just been burned. The parts that remained were hanging on a pole, which was supported at each end by a crotch stuck in the ground, and were roasted or burnt black as a coal. The fire was yet burning; and the whole appearance afforded a spectacle so shocking that even to this day the blood almost curdles in my veins when I think of them.

At night we arrived at a small Seneca Indian town, at the mouth of a small river that was called by the Indians, in the Seneca language, She-nan-jee, about eighty miles by water from the fort, where the two squaws to whom I belonged resided. There we landed, and the Indians went on; which was the last I ever saw of them.

Having made fast to the shore, the squaws left me in the canoe while they went to their wigwam or house in the town, and returned with a suit of Indian clothing, all new, and very clean and nice. My clothes, though whole and good when I was taken, were now torn in pieces, so that I was almost naked. They first undressed me, and threw my rags into the river; then washed me clean and dressed me in the new suit they had just brought, in complete Indian style; and then led me home and seated me in the center of their wigwam.

I had been in that situation but a few minutes before all the squaws in the town came in to see me. I was soon surrounded by them, and they immediately set up a most dismal howling, crying bitterly, and wringing their hands in all the agonies of grief for a deceased relative.

Their tears flowed freely, and they exhibited all the signs of real mourning. At the commencement of this scene, one of their number began, in a voice somewhat between speaking and singing, to recite some words to the following purport, and continued the recitation till the ceremony was ended; the company at the same time varying the appearance of their countenances, gestures, and tone of voice, so as to correspond with the sentiments expressed by their leader.

"Oh, our brother! alas! he is dead—he has gone; he will never return! Friendless he died on the field of the slain, where his bones are yet lying unburied! Oh! who will not mourn his sad fate? No tears dropped around him: oh, no! No tears of his sisters were there! He fell in his prime, when his arm was most needed to keep us from danger! Alas! he has gone, and left us in sorrow, his loss to bewail! Oh, where is his spirit? His spirit went naked, and hungry it wanders, and thirsty and wounded, it groans to return! Oh, helpless and wretched, our brother has gone! No blanket nor food to nourish and warm him; nor candles to light him, nor weapons of war! Oh, none of those comforts had he! But well we remember his deeds! The deer he could take on the chase! The panther shrunk back at the sight of his strength! His enemies fell at his feet! He was brave and courageous in war! As the fawn, he was harmless; his friendship was ardent; his temper was gentle; his pity was great! Oh! our friend, our companion, is dead! Our brother, our brother! alas, he is gone! But why do we grieve for his loss? In the strength of a warrior, undaunted he left us, to fight by the side of the chiefs! His warwhoop was shrill! His rifle well aimed laid his enemies low: his tomahawk drank of their blood: and his knife flayed their scalps while yet covered with gore! And why do we mourn? Though he fell on the field of the slain, with glory he fell; and his spirit went up to the land of his fathers in war! They why do we mourn? With transports of joy, they received him, and fed him, and clothed him, and welcomed him there! Oh, friends, he is happy; then dry up your tears! His spirit has seen our distress, and sent us a helper whom with pleasure we greet. Dickewamis has come: then let us receive her with joy!—she is handsome and pleasant! Oh! she is our sister, and gladly we welcome her here. In the place of our brother she stands in our tribe. With care we will guard her from trouble; and may she be happy till her spirit shall leave us."

In the course of that ceremony, from mourning they became serene,—joy sparkled in their countenances, and they seemed to rejoice over me as over a long-lost child. I was made welcome among them as a sister to the two squaws before mentioned, and was called Dickewamis; which, being interpreted, signifies a pretty girl, a handsome girl, or a pleasant, good thing. That is the name by which I have ever since been called by the Indians.

I afterward learned that the ceremony I at that time passed through was that of adoption. The two squaws had lost a brother in Washington's war, sometime in the year before, and in consequence of his death went up to Fort Du Quesne on the day on which I arrived there, in order to receive a prisoner, or an enemy's scalp, to supply their loss. It is a custom of the Indians, when one of their number is slain or taken prisoner in battle, to give to the nearest relative of the dead or absent a prisoner, if they have chanced to take one; and if not, to give him the scalp of an enemy. On the return of the Indians from the conquest, which is always announced by peculiar shoutings, demonstrations of joy, and the exhibition of some trophy of victory, the mourners come forward and make their claims. If they receive a prisoner, it is at their option either to satiate their vengeance by taking his life in the most cruel manner they can conceive of, or to receive and adopt him into the family, in the place of him whom they have lost. All the prisoners that are taken in battle and carried to the encampment or town by the Indians are given to the bereaved families, till their number is good. And unless the mourners have but just received the news of their bereavement, and are under the operation of a paroxysm of grief, anger, or revenge; or, unless the prisoner is very old, sickly, or homely, they generally save them, and treat them kindly. But if their mental wound is fresh, their loss so great that they deem it irreparable, or if their prisoner or prisoners do not meet their approbation, no torture, let it be ever so cruel, seems sufficient to make them satisfaction. It is family and not national sacrifices among the Indians, that has given them an indelible stamp as barbarians, and identified their character with the idea which is generally formed of unfeeling ferocity and the most barbarous cruelty.

It was my happy lot to be accepted for adoption. At the time of the ceremony I was received by the two squaws to supply the place of their brother in the family; and I was ever considered and treated by them as a real sister, the same as though I had been born of their mother.

During the ceremony of my adoption, I sat motionless, nearly terrified to death at the appearance and actions of the company, expecting every moment to feel their vengeance, and suffer death on the spot. I was, however, happily disappointed; when at the close of the ceremony the company retired, and my sisters commenced employing every means for my consolation and comfort.

Being now settled and provided with a home, I was employed in nursing the children, and doing light work about the house. Occasionally, I was sent out with the Indian hunters, when they went but a short distance, to help them carry their game. My situation was easy; I had no particular hardships to

endure. But still, the recollection of my parents, my brothers and sisters, my home, and my own captivity, destroyed my happiness, and made me constantly solitary, lonesome, and gloomy.

My sisters would not allow me to speak English in their hearing; but remembering the charge that my dear mother gave me at the time I left her, whenever I chanced to be alone I made a business of repeating my prayer, catechism, or something I had learned, in order that I might not forget my own language. By practicing in that way, I retained it till I came to Genesee flats, where I soon became acquainted with English people, with whom I have been almost daily in the habit of conversing.

My sisters were very diligent in teaching me their language; and to their great satisfaction, I soon learned so that I could understand it readily, and speak it fluently. I was very fortunate in falling into their hands; for they were kind, good-natured women; peaceable and mild in their dispositions; temperate and decent in their habits, and very tender and gentle toward me. I have great reason to respect them, though they have been dead a great number of years....

Chapter 7.

After the conclusion of the French war, our tribe had nothing to do till the commencement of the American Revolution. For twelve or fifteen years, the use of the implements of war was not known, nor the warwhoop heard, save on days of festivity, when the achievements of former times were commemorated in a kind of mimic warfare, in which the chiefs, and warriors displayed their prowess, and illustrated their former adroitness, by laying the ambuscade, surprising their enemies, and performing many accurate maneuvers with the tomahawk and scalping knife; thereby preserving, and banding to their children, the theory of Indian warfare. During that period they also pertinaciously observed the religious rites of their progenitors, by attending with the most scrupulous exactness, and a great degree of enthusiasm, to the sacrifices, at particular times, to appease the anger of the Evil Deity; or to excite the commiseration of the Great Good Spirit, whom they adored with reverence, as the author, governor, supporter, and disposer of every good thing of which they participated.

They also practiced in various athletic games, such as running, wrestling, leaping, and playing ball, with a view that their bodies might be more supple—or, rather, that they might not become enervated, and that they might be enabled to make a proper selection of chiefs for the councils of the nation, and leaders for war.

While the Indians were thus engaged in their round of traditionary performances, with the addition of hunting, their women attended to agriculture, their families, and a few domestic concerns of small consequence and attended with but little labor.

No people can live more happy than the Indians did in times of peace, before the introduction of spiritous liquors among them. Their lives were a continual round of pleasures. Their wants were few, and easily satisfied, and their cares were only for to-day—the bounds of their calculation for future comfort not extending to the incalculable uncertainties of to-morrow. If peace ever dwelt with men, it was in former times, in the recess from war, among what are now termed barbarians. The moral character of the Indians was (if I may be allowed the expression) uncontaminated. Their fidelity was perfect, and became proverbial. They were strictly honest; they despised deception and falsehood; and chastity was held in high veneration, and a violation of it was considered sacrilege. They were temperate in their desires, moderate in their passions, and candid and honorable in the expression of their sentiments, on every subject of importance.

Thus, at peace among themselves and with the neighboring whites—though there were none at that time very near—our Indians lived quietly and peaceably at home, till a little before the breaking out of the Revolutionary War....

Chapter 9.

Soon after the close of the Revolutionary War, my Indian brother, Kau-jises-tau-ge-au, (which being interpreted signifies Black Coals) offered me my liberty, and told me that if it was my choice I might go to my friends.

My son Thomas was anxious that I should go; and offered to go with me, and assist me on the journey, by taking care of the younger children, and providing food as we traveled through the wilderness. But the chiefs of our tribe, suspecting, from his appearance, actions, and a few warlike exploits, that Thomas would be a great warrior, or a good counselor, refused to let him leave them on any account whatever.

To go myself, and leave him, was more than I felt able to do; for he had been kind to me, and was one on whom I placed great dependence. The chiefs refusing to let him go was one reason for my resolving to stay; but another, more powerful if possible, was, that I had got a large family of Indian children that I must take with me; and that, if I should be so fortunate as to find my relatives, they would despise them, if not myself, and treat us as enemies, or, at least, with a degree of cold indifference, which I thought I could not endure.

Accordingly, after I had duly considered the matter, I told my brother that it was my choice to stay and spend the remainder of my days with my Indian friends, and live with my family as I hitherto had done. He appeared well pleased with my resolution, and informed me that, as that was my choice, I should have a piece of land that I could call my own, where I could live unmolested, and have something at my decease to leave for the benefit of my children.

A Report on the Kite Experiment (1752)

Benjamin Franklin's letters to his English friend Peter Collinson concerning electricity were read to the Royal Society of London, and Collinson collected them for publication in 1751. The Royal Society recognized Franklin's work and, in 1753, awarded him their highest scientific honor, the Copley Medal. This singular honor helped secure Franklin's reputation as a scientist.

The following is from a letter describing the kite experiment. Written on October 19, 1752, from Franklin to Collinson, this letter was subsequently published in *The Pennsylvania Gazette*.

As frequent Mention is made in the News Papers from Europe, of the Success of the Philadelphia Experiment for drawing the Electric Fire from Clouds by Means of pointed Rods of Iron erected on high Buildings, &c. it may be agreeable to the Curious to be inform'd, that the same Experiment has succeeded in Philadelphia, tho' made in a different and more easy Manner, which any one may try, as follows.

Make a small Cross of two light Strips of Cedar, the Arms so long as to reach to the four Corners of a large thin Silk Handkerchief when extended; tie the Corners of the Handkerchief to the Extremities of the Cross, so you have the Body of a Kite; which being properly accommodated with a Tail, Loop and String, will rise in the Air, like those made of Paper; but this being of Silk is fitter to bear the Wet and Wind of a Thunder Gust without tearing. To the Top of the upright Stick of the Cross is to be fixed a very sharp pointed Wire, rising a Foot or more above the Wood. To the End of the Twine, next the Hand, is to be tied a silk Ribbon, and where the Twine and the silk join, a Key may be fastened. This Kite is to be raised when a Thunder Gust appears to be coming on, and the Person who holds the String must stand within a Door, or Window, or under some Cover, so that the Silk Ribbon may not be wet; and Care must be taken that the Twine does not touch the Frame of the Door or Window. As soon as any of the Thunder Clouds come over the Kite, the pointed Wire will draw the Electric Fire from them, and the Kite, with all the Twine, will be electrified, and the loose Filaments of the Twine will stand out every Way, and be attracted by an approaching Finger. And when the Rain has wet the Kite and Twine, so that it can conduct the Electric Fire freely, you will find it stream out plentifully from the Key on the Approach of your Knuckle. At this Key the Phial may be charg'd; and from Electric Fire thus obtain'd, Spirits may be kindled, and all the other Electric Experiments be perform'd, which are usually done by the Help of a rubbed Glass Globe or Tube; and thereby the Sameness of the Electric Matter with that of Lightning compleatly demonstrated.

Correspondence of Benjamin Franklin (1752, 1753, 1769)

Source: Benjamin Franklin, *The Writings of Benjamin Franklin*, edited by Albert Henry Smyth (New York: Macmillan Company, 1905–1907).

The Magical Circle

Benjamin Franklin corresponded with learned men of his day, and his letters reveal his wide-ranging interests. He communicated regarding experiments on electricity with the scientifically oriented London merchant Peter Collinson. Here, in a letter to Collinson, Franklin shares his mathematical "magical circle" algorithm.

1752?

SIR,

I am glad the perusal of the magical squares afforded you any amusement. I now send you the magical circle.

Its properties, besides those mentioned in my former, are these.

Half the number in any radial row, added with half the central number, make 180, equal to the number of degrees in a semi-circle.

Also half the numbers in any one of the concentric circles, taken either above or below the horizontal double line, with half the central number, make 180.

And if any four adjoining numbers, standing nearly in a square, be taken from any part, and added with half the central number, they make 180.

There are, moreover, included four other sets of circular spaces, excentric with respect to the first, each of these sets containing five spaces. The centers of the circles that bound them, are at A, B, C, and D. Each set, for the more easy distinguishing them from the first, are drawn with a different colour'd ink, red, blue, green, and yellow.

These sets of excentric circular spaces intersect those of the concentric, and each other; and yet the numbers contained in each of the twenty excentric spaces, taken all around, make, with the central number, the same sum as those in each of the 8 concentric, viz. 360. The halves, also of those drawn from the centers A and C, taken above or below the double horizontal line, and of those drawn from centers B and D, taken to the right or left of the vertical line, do, with half the central number, make just 180.

It may be observed, that there is not one of the numbers but what belongs at least to two of the different circular spaces; some to three, some to four, some to five; and yet they are all so placed as never to break the required number 360, in any of the 28 circular spaces within the primitive circle.

These interwoven circles make so perplexed an appearance, that it is not easy for the eye to trace every circle of numbers one would examine, through

all the maze of circles intersected by it; but if you fix one foot of the compasses in either of the centers, and extend the other to any number in the circle you would examine belonging to that center, the moving foot will point the others out, by passing round over all the numbers of that circle successively.

I am, &c.

Electricity, the Transit of Mercury, and a Northwest Passage

This letter to Cadwallader Colden, then a Philadelphia scientist and physician, apparently relates to a scientific text being readied for publication by Franklin. In the letter, Franklin flatters Colden for his mathematical ability, downplaying his own aptitude for the subject. The letter also mentions Franklin's work on electricity, reveals his astronomical interest, and indicates his support of a ship ready to undertake a voyage to secure a Northwest Passage.

Philada[delphia] Feb[ruary] 28, 1753

Dear Sir

I return you herewith Professor Kanster's Remarks. As far as I am able to judge, the Translation is just, and your Answer a good one. I am pleas'd with the Omission of that part of a Paragraph relating to the German and Pensilvanian Electricians, and have corrected the Copy as you direct. I have but one other Alteration to propose, which is, to omit some Part of the last Paragraph, and read the rest thus;—"After all, Mr. Colden must think himself obliged to the Professor, for exposing the Difficulties his Treatise lies under in the Opinion of others, as thereby an Opportunity is given of explaining his Doctrine more fully to their Satisfaction." For it seems to me not so proper to make Acknowledgement for his Translating your Piece, as if it were a Favour, when he tells the World he did it by Command: And I apprehend it unnecessary, and that it may look like too great a Fondness for Complement, to draw one from him by Consequence; viz. That he did not think it a trifling Performance, or he would not have taken the Trouble, &c. since he himself freely says, that the many new, good and just Thoughts contain'd in it, made him willingly undertake the Task enjoin'd him. Besides that it is not clear he could have refus'd to obey the Command he received, whatever might have been his private Sentiments. The Ship I intended to forward these Papers by to Mr. Collinson, has stay'd much longer than I expected, and now I am told will not sail before the End of next Month, so that I may possibly receive your Directions concerning this propos'd Alteration before she sails.

I find I was not wrong in my Apprehensions that your Book would be incorrectly printed. I hope however, that the Errata will be in England time enough to be published with the Work; and I thank you for sending them to me. I have corrected the Book accordingly, and given it one Reading; but it is not a Piece to make sudden Remarks on, as one might of a Poem or other Performance on common Subjects. I must read and consider it yet more attentively; at present I can only tell you, that some Things in it please me exceedingly; some I do not yet clearly understand; and one or two Positions I think wrong; of all which you shall hear more fully in my next. On the whole it gives me great Satisfaction, when I consider it as a Work that will not only improve Philosophy, but do Honour to America.

I am sorry I have not, as you expect, anything new to communicate to you on the Subject of Electricity. My Time and Thoughts have of late been much engag'd in other Matters: And ever since I heard of your being furnish'd with an Apparatus, I have hoped rather to receive Information of new Discoveries from you, than expected to send you any. If your other philosophical Pursuits do not prevent your Application to the Experiments you propos'd to make on various Salts, &c. I shall still hope it. Your Skill and Expertness in Mathematical Computations, will afford you an Advantage in these Disquisitions, that I lament the want of, who am like a Man searching for something in a dark Room, where I can only grope and guess; while you proceed with a Candle in your Hand.

We are preparing here to make accurate Observations on the approaching Transit of Mercury over the Sun. You will oblige us much by sending the Account you have received from Lord Macclesfield of his great mural Quadrant. I congratulate you on your Discovery of a new Motion in the Earth's Axis: You will, I see, render your Name immortal.

I believe I have not before told you, that I have procur'd a Subscription here of pounds 1500 to fit out a Vessel in Search of a NWest Passage: she sails in a few Days, and is called the Argo, commanded by Mr. Swaine, who was in the last Expedition in the California, Author of a Journal of that Voyage in two Volumes. We think the Attempt laudable, whatever may be the Success.... Magnis tamen excidit ausis. [A great venture even though unsuccessful.]

With great Esteem, I am, Dear Sir, Your most humble Servant

The King's Botanist

This letter to the Philadelphia naturalist John Bartram is the warmest of the three selections here. Franklin encourages his friend Bartram, the king's royal botanist in America, to record his observations for publication, indicating that there is interest in his work. Franklin also places an order for seed samples with Bartram, who supplied many scientists of the day with specimens, and offers to send some in return.

London July 9, 1769

Dear Friend,

It is with great Pleasure I understand by your Favour of April 10. that you continue to enjoy so good a Share of Health. I hope it will long continue. And altho' it may not now be suitable for you to make such wide Excursions as heretofore, you may yet be very useful to your Country and to Mankind, if you sit down quietly at home, digest the Knowledge you have acquired, compile and publish the many Observations you have made, and point out the Advantages that may be drawn from the whole, in publick Undertakings or particular private Practice. It is true many People are fond of Accounts of old Buildings, Monuments, &c. but there is a Number who would be much better pleas'd with such Accounts as you could afford them: And for one I confess that if I could find in any Italian Travels a Receipt for making Parmesan Cheese, it would give me more Satisfaction than a Transcript of any Inscription from any old Stone whatever.

I suppose Mr. Michael Collinson, or Dr. Fothergill have written to you what may be necessary for your Information relating to your Affairs here. I imagine there is no doubt but the King's Bounty to you will be continued; and that it will be proper for you to continue sending now and then a few such curious

Seeds as you can procure to keep up your Claim. And now I mention Seeds, I wish you would send me a few of such as are least common, to the Value of a Guinea, which Mr. Foxcroft will pay you for me. They are for a particular Friend who is very curious. If in any thing I can serve you here, command freely,

Your affectionate Friend

P.S. Pray let me know whether you have had sent you any of the Seeds of the Rhubarb describ'd in the enclos'd Prints. It is said to be of the true kind. If you have it not, I can procure some Seeds for you.

Founding Colleges in America (1754)

Colonial colleges usually were founded for religious purposes and most especially for the training of the ministry. The College of New Jersey (now Princeton University) came into existence in 1764, in part, due to the Great Awakening. Its charter prohibited the exclusion of any student on the basis of religion, a provision that was to prove advantageous in fund raising.

In 1752, the College of New Jersey described its origins and policies in a promotional brochure, which was reprinted in Britain in 1754. The following is text from that brochure.

NOTHING has a more direct tendency to advance the happiness and glory of a community than the founding of public schools and seminaries of learning for education of youth, and adorning their minds with useful knowledge and virtue. Hereby, the rude and ignorant are civilized and rendered human; persons who would otherwise be useless member[s] of society are qualified to sustain with honor the offices they may be invested with for the public service reverence of the Deity, filial piety, and obedience to the laws are inculcated and promoted. The sciences have nowhere flourished with more success than in our mother country. The universities and seminaries of Learning in England and Scotland a[re] annually sending abroad into the Kingdom proficient[s] in all kinds of literature; men of refined sentiments, solid judgments, and noble principles, who spread (if the expression may be allowed) a kind of literary glory over the British nation.

America remained, during a long period, in the thickest darkness of ignorance and barbarism, till Christianity, at the introduction of the Europeans, enlightened her hemisphere with the salutary beams of life and immortality. Science, her constant attendant, soon raised her depressed head, and the arts began to flourish. New England first felt her nigh influences, whose sons she inspired with a generous emulation of erecting schools and colleges for the instruction of their youth, and instilling into the tender mind the principles of [pious] ... learning. The southwestward colonies, except Virginia, continued a considerable number of years without any public institutions for the cultivation of the sciences. At length, several gentlemen residing in and near the province of New Jersey, who were well-wishers to the felicity of their count[ry] and real friends of [religious] ... learning, having observed the vast increase of those colonies, with the denseness and ignorance of their inhabitants for want of the necessary means of improvement, first projected the scheme of a collegiate education in that province. The immediate motives to this generous design were: the great number of Christian societies then lately formed in various parts of the country, where many thousands of the inhabitants, ardently desirous of the administration of religious ordinances, were entirely destitute of the necessary means of instruction and incapable of being relieved; the urgent applications that were annually made by those vacant congregations to the clergy in their collective bodies; complaining in the most moving manner of their unhappy circumstances in being deprived of the ordinary means of salvation and left to grope after happiness, almost in the obscurity of paganism, though the light of revelation shone on their surrounding neighbors; the great scarcity of candidates for the ministerial function to comply with these pious and Christian demands; the colleges of New England educating hardly a competent number for the service of its own churches—these considerations were the most urgent arguments for the immediate prosecution of the above mentioned scheme of education.

Accordingly, in the year 1747, a petition was presented to His Excellency Jonathan Belcher, Esq., governor of that province (a gentleman who has long signalized himself as a patron of religion and learning), praying His Majesty's grant of a charter for the establishment of a public seminary of literature in New Jersey. His Excellency, with the approbation of the council and attorney general of the said province, was pleased to comply with their request; and ordered a charter to pass the seals, incorporating sundry gentlemen, to the number of twenty-three, by the name of the Trustees of [th]e College of New Jersey [Princeton]; and appointing the governor of New Jersey, for the time being, who is His Majesty's representative, to act as their president when convened. This charter places the society upon the most catholic foundation—all Protestants of every denomination who are loyal subjects to Our Most Gracious Sovereign (the happy effects of whose mild and equal administration the remotest colonies of the British empire sensibly experience and gratefully acknowledge) are admitted to the enjoyment of all its privileges and allowed the unlimited exercise of their religion.

The trustees, thus authorized with ample powers for the execution of this laudable design, in conformity to the plan of their charter, applied themselves with the utmost deliberation to form and enact such rules and orders for the regulation of the methods of instruction and conduct of the students as might tend to prevent the entrance of vice into the society, and the introduction of idleness, vanity, and extravagant expenses among its members. It would be repugnant to the design of a general narrative, as well as impertinent to the reader, to enter into a minute detail of these several private regulations. It will suffice to say that the two principal objects the trustees had in view were science and religion. Their first concern was to cultivate the minds of the pupils in all those branches of erudition which are generally taught in the universities abroad; and, to perfect their design, their next care was to rectify the heart by inculcating the great precep[ts] of Christianity order to make them good. Upon the views this society was founded. Providence so far smiled upon the undertaking, in the first instance, as to point out a gentleman, possessed of every requisite endowment, to be placed at the head of such an academy. The Rev. Mr. Aaron Burr has been long known in these parts of America for his piety, affability, universal acquaintance with the arts and sciences, his easy, familiar methods of instruction. Under his immediate tuition and government, this society has flourished far beyond the most raised and sanguine expectations. The number of students has increased, in the short space of five years, from eight or ten, to about sixty; besides near forty in the grammar school. As no human institutions in a world of imperfection and error are so completely modeled to exclude the possibility of further emendation, it may be

said, without any intention of disparagement to other learned seminaries, that the governors of this college have endeavored to improve upon the commonly conceived plans of education. They proceed not so much in the method of a dogmatic institution, by prolix discourses on the different branches of the sciences, by burdening the memory and imposing heavy and disagreeable tasks, as in the Socratic way of free dialogue between teacher and pupil, or between the students themselves under the inspection of their tutors. In this manner, the attention is engaged, the mind entertained, and the scholar animated in the pursuit of knowledge. In fine, the arts and sciences are conveyed into the minds of youth in a method, the most easy, natural, and familiar.

But as religion ought to be the end of all instruction and gives it the last degree of perfection; as one of the primary views of this foundation was to educate young gentlemen for the sacred office of the ministry and fit them for the discharge of so noble an employment; divinity, the mistress the sciences, engages the peculiar attention of the governors of this society. Stated times are set apart for the study of the Holy Scriptures in the original languages, and stated hours daily consecrated to the service of religion. The utmost care is taken to discountenance vice and to encourage the practice of virtue and a manly, rational, and Christian behavior in the students. Enthusiasm, on the one hand, and profaneness, on the other, are equally guarded against and meet with the severest checks.

Under such management, this seminary, from the smallest beginnings, quickly drew the public attention, enlarged the number of her pupils, raised her reputation; and now ... her ancient sisters upon the Continent. Daily observation evidences that in proportion as learning makes its progress in a country, it softens the natural roughness, eradicates the prejudices, and transforms the genius and disposition of its inhabitants. New Jersey and the adjacent provinces already feel the happy effects of this useful institution. A general desire of knowledge seems to be spreading among the people. Parents are inspired with emulation of cultivating the minds of their offspring; public stations are honorably filled by gentlemen who have received their education here; and, from hence, many Christian assemblies are furnished with men of distinguished talents for the discharge of the pastoral office....

From the above representation of the ends for which this corporation was founded, the happy effects of its institution, and its present necessitous circumstances, it is hoped that the pious and benevolent in Great Britain, into who[se] hands these papers may fall, will extend their generous aids in the prosecution and completion of so excellent and useful a design. A Design! upon the success of which the happiness of multitudes in sundry colonies, and their numerous posterity, in the present and future ages far distant, in a great measure depends. A Design! which not only tends to promote the weal of the British inhabitants but also of the German emigrants; and to spread the gospel of salvation among the benighted Indian tribes and attach them to His Majesty's government. A Design! which is not calculated to promote the low purposes of a party, but in its views and consequences affects the Protestant interest in general, and Great Britain in particular, both in religious and civil respects; since, by this, the filial duty of her descendants will be inculcated, their manners reformed, and her trade increased; which is the basis of her empire, glory, and felicity.

The inhabitants of the infant colonies, dependent upon this seminary, unable to relieve themselves, are constrained to solicit and implore the assistance of others. And to whom shall they look but to their tender and powerful parent? To move her compassion, they plead their relation as children, as fellow subjects, as Christian and Protestant brethren with her sons that still enjoy the advantages of residing in their native country. They plead the deplorable circumstances of the church, and the exigencies of the state, for want of such an institution brought to maturity. And they beg leave modestly to intimate their importance to their mother country, as they enlarge the British dominions upon a vast continent, whither the industrious Poor may transplant themselves and find a comfortable subsistence, as they are a check upon the growth of the French power in America; engage the Indian natives to the British interest; furnish various assistances in time of war against the common enemy; and carry on sundry branches of trade advantageous to Great Britain, which will undoubtedly flourish more in proportion to their improvements in the liberal arts and sciences—for history and observation assure us that learning and trade mutually promote each other.

Colonial Recipe for Apple Tansey (1754)

After a meal, possibly of peanut soup and Carolina fish muddle, a favorite colonial dessert was a simple apple tansey, cooked like a custard in a pot or dish over a hearth.

Apple Tansey

To make an Apple Tansey,

Take three pippins, slice them round in thin slices, and fry them with butter.

Then beat four eggs, with six spoonfuls of cream, a little rosewater, nutmeg, and sugar

Stir them together, and pour it over the apples.

Let it fry a little, and turn it with a pye-plate.

Garnish with lemon and sugar strew'd over it.

Evangeline, A Tale of Acadie (in 1755; pub. 1847)

Henry Wadsworth Longfellow's narrative poem "Evangeline" tells the sad story of the French Acadians, banished from their lush, forested homeland (in the area now known as Nova Scotia, New Brunswick, and eastern Maine) by the British in 1755. In this poem, Evangeline and her betrothed, Gabriel, are separated as their settlement is dispersed. Evangeline spends a lifetime searching for him, narrowly missing him several times. As a ministering Sister of Mercy, she finally finds him in a Philadelphia almshouse, just moments before his death.

THIS is the forest primeval. The murmuring pines and the hemlocks,
Bearded with moss, and in garments green, indistinct in the twilight,
Stand like Druids of eld, with voices sad and prophetic,
Stand like harpers hoar, with beards that rest on their bosoms.
Loud from its rocky caverns, the deep-voiced neighboring ocean
Speaks, and in accents disconsolate answers the wail of the forest.
This is the forest primeval; but where are the hearts that beneath it
Leaped like the roe, when he hears in the woodland the voice of the huntsman?
Where is the thatch-roofed village, the home of Acadian farmers,—
Men whose lives glided on like rivers that water the woodlands,
Darkened by shadows of earth, but reflecting an image of heaven?
Waste are those pleasant farms, and the farmers forever departed!
Scattered like dust and leaves, when the mighty blasts of October
Seize them, and whirl them aloft, and sprinkle them far o'er the ocean.
Naught but tradition remains of the beautiful village of Grand-Pré.
Ye who believe in affection that hopes, and endures, and is patient,
Ye who believe in the beauty and strength of woman's devotion,
List to the mournful tradition still sung by the pines of the forest;
List to a Tale of Love in Acadie, home of the happy.

PART THE FIRST.

... in silence the crowd awaited the will of the soldiers.
Then uprose their commander, and spake from the steps of the altar,
Holding aloft in his hands, with its seals, the royal commission.
"You are convened this day," he said, "by his Majesty's orders.
Clement and kind has he been; but how you have answered his kindness,
Let your own hearts reply! To my natural make and my temper
Painful the task is I do, which to you I know must be grievous.
Yet must I bow and obey, and deliver the will of our monarch;
Namely, that all your lands, and dwellings, and cattle of all kinds
Forfeited be to the crown; and that you yourselves from this province
Be transported to other lands. God grant you may dwell there
Ever as faithful subjects, a happy and peaceable people!

Prisoners now I declare you; for such is his Majesty's pleasure!" ...

PART THE SECOND.

MANY a weary year had passed since the burning of Grand-Pré,
When on the falling tide the freighted vessels departed,
Bearing a nation, with all its household gods, into exile,
Exile without an end, and without an example in story.
Far asunder, on separate coasts, the Acadians landed;
Scattered were they, like flakes of snow, when the wind from the northeast
Strikes aslant through the fogs that darken the Banks of Newfoundland.
Friendless, homeless, hopeless, they wandered from city to city,
From the cold lakes of the North to sultry Southern savannas,—
... But Evangeline's heart was sustained by a vision, that faintly
Floated before her eyes, and beckoned her on through the moonlight.
It was the thought of her brain that assumed the shape of a phantom.
Through those shadowy aisles had Gabriel wandered before her,
And every stroke of the oar now brought him nearer and nearer ...
... There from the troubled sea had Evangeline landed, an exile,
Finding among the children of Penn a home and a country....
... Something at least there was in the friendly streets of the city,
Something that spake to her heart, and made her no longer a stranger;
And her ear was pleased with the Thee and Thou of the Quakers,
For it recalled the past, the old Acadian country,
Where all men were equal, and all were brothers and sisters.
So, when the fruitless search, the disappointed endeavor,
Ended, to recommence no more upon earth, uncomplaining,
Thither, as leaves to the light, were turned her thoughts and her footsteps....
... Thus, on a Sabbath morn, through the streets, deserted and silent,
Wending her quiet way, she entered the door of the almshouse.
Sweet on the summer air was the odor of flowers in the garden;
And she paused on her way to gather the fairest among them,
That the dying once more might rejoice in their fragrance and beauty.
Then, as she mounted the stairs to the corridors, cooled by the east wind,
Distant and soft on her ear fell the chimes from the belfry of Christ Church,
While, intermingled with these, across the meadows were wafted
Sounds of psalms, that were sung by the Swedes in their church at Wicaco.
Soft as descending wings fell the calm of the hour on her spirit;
Something within her said, "At length thy trials are ended";
And, with light in her looks, she entered the chambers of sickness.
Noiselessly moved about the assiduous, careful attendants,

Moistening the feverish lip, and the aching brow, and in silence
Closing the sightless eyes of the dead, and concealing their faces,
Where on their pallets they lay, like drifts of snow by the roadside.
Many a languid head, upraised as Evangeline entered,
Turned on its pillow of pain to gaze while she passed, for her presence
Fell on their hearts like a ray of the sun on the walls of a prison.
And, as she looked around, she saw how Death, the consoler,
Laying his hand upon many a heart, had healed it forever.
Many familiar forms had disappeared in the night-time;
Vacant their places were, or filled already by strangers.
Suddenly, as if arrested by fear or a feeling of wonder,
Still she stood, with her colorless lips apart, while a shudder
Ran through her frame, and, forgotten, the flowerets dropped from her fingers,
And from her eyes and cheeks the light and bloom of the morning.
Then there escaped from her lips a cry of such terrible anguish,
That the dying heard it, and started up from their pillows.
On the pallet before her was stretched the form of an old man.
Long, and thin, and gray were the locks that shaded his temples;
But, as he lay in the morning light, his face for a moment
Seemed to assume once more the forms of its earlier manhood;
So are wont to be changed the faces of those who are dying.
Hot and red on his lips still burned the flush of the fever,
As if life, like the Hebrew, with blood had besprinkled its portals,
That the Angel of Death might see the sign, and pass over.
Motionless, senseless, dying, he lay, and his spirit exhausted
Seemed to be sinking down through infinite depths in the darkness,
Darkness of slumber and death, forever sinking and sinking.
Then through those realms of shade, in multiplied reverberations,
Heard he that cry of pain, and through the hush that succeeded
Whispered a gentle voice, in accents tender and saint-like,
"Gabriel! O my beloved!" and died away into silence.
Then he beheld, in a dream, once more the home of his childhood;
Green Acadian meadows, with sylvan rivers among them,
Village, and mountain, and woodlands; and, walking under their shadow,
As in the days of her youth, Evangeline rose in his vision.
Tears came into his eyes; and as slowly he lifted his eyelids,
Vanished the vision away, but Evangeline knelt by his bedside.
Vainly he strove to whisper her name, for the accents unuttered
Died on his lips, and their motion revealed what his tongue would have spoken.

Vainly he strove to rise; and Evangeline, kneeling beside him,
Kissed his dying lips, and laid his head on her bosom.
Sweet was the light of his eyes; but it suddenly sank into darkness,
As when a lamp is blown out by a gust of wind at a casement.
All was ended now, the hope, and the fear, and the sorrow,
All the aching of heart, the restless, unsatisfied longing,
All the dull, deep pain, and constant anguish of patience!
And, as she pressed once more the lifeless head to her bosom,
Meekly she bowed her own, and murmured, "Father, I thank thee!"
STILL stands the forest primeval; but far away from its shadow,
Side by side, in their nameless graves, the lovers are sleeping.
Under the humble walls of the little Catholic churchyard,
In the heart of the city, they lie, unknown and unnoticed.
Daily the tides of life go ebbing and flowing beside them,
Thousands of throbbing hearts, where theirs are at rest and forever,
Thousands of aching brains, where theirs no longer are busy,
Thousands of toiling hands, where theirs have ceased from their labors,
Thousands of weary feet, where theirs have completed their journey!
Still stands the forest primeval; but under the shade of its branches
Dwells another race, with other customs and language.
Only along the shore of the mournful and misty Atlantic
Linger a few Acadian peasants, whose fathers from exile
Wandered back to their native land to die in its bosom.
In the fisherman's cot the wheel and the loom are still busy;
Maidens still wear their Norman caps and their kirtles of homespun,
And by the evening fire repeat Evangeline's story.
While from its rocky caverns the deep-voiced, neighboring ocean
Speaks, and in accents disconsolate answers the wail of the forest.

Rights of the British Colonies Asserted and Proved (1764)

James Otis, a political leader from Boston, defends colonial rights, asserting that Parliament cannot levy direct taxes on the colonists. In this pamphlet, he maintains that the colonists can only be taxed by a legislature that represents them, and he bases this proposition on provincial charters, common law, and the British constitution itself. Otis also asserts that black men are entitled to the same natural rights as white men.

It is ... true in fact and experience, as the great, the incomparable Harrington has most abundantly demonstrated in his *Oceana* and other divine writings, that empire follows the balance of property. 'Tis also certain that property in fact generally confers power, though the possessor of it may not have much more wit than a mole or a musquash: and this is too often the cause that riches are sought after without the least concern about the right application of them. But is the fault in the riches, or the general law of nature, or the unworthy possessor? It will never follow from all this that government is rightfully founded on property alone. What shall we say then? Is not government founded on grace? No. Nor on force? No. Nor on compact? Nor property? Not

altogether on either. Has it any solid foundation, any chief cornerstone but what accident, chance, or confusion may lay one moment and destroy the next? I think it has an everlasting foundation in the unchangeable will of GOD, the author of nature, whose laws never vary. The same omniscient, omnipotent, infinitely good and gracious Creator of the universe who has been pleased to make it necessary that what we call matter should gravitate for the celestial bodies to roll round their axes, dance their orbits, and perform their various revolutions in that beautiful order and concern which we all admire has made it equally necessary that from Adam and Eve to these degenerate days the different sexes should sweetly attract each other, form societies of single families, of which larger bodies and communities are as naturally, mechanically, and necessarily combined as the dew of heaven and the soft distilling rain is collected by the all-enlivening heat of the sun. Government is therefore most evidently founded on the necessities of our nature. It is by no means an arbitrary thing depending merely on compact or human will for its existence....

The end of government being the good of mankind points out its great duties: it is above all things to provide for the security, the quiet, and happy enjoyment of life, liberty, and property. There is no one act which a government can have a right to make that does not tend to the advancement of the security, tranquillity, and prosperity of the people. If life, liberty, and property could be enjoyed in as great perfection in solitude as in society there would be no need of government. But the experience of ages has proved that such is the nature of man, a weak, imperfect being, that the valuable ends of life cannot be obtained without the union and assistance of many. Hence 'tis clear that men cannot live apart or independent of each other. In solitude men would perish, and yet they cannot live together without contests. These contests require some arbitrator to determine them. The necessity of a common, indifferent, and impartial judge makes all men seek one, though few find him in the sovereign power of their respective states or anywhere else in subordination to it....

I know of no human law founded on the law of nature to restrain him from separating himself from all the species if he can find it in his heart to leave them, unless it should be said it is against the great law of self-preservation: but of this every man will think himself his own judge.

The few hermits and misanthropes that have ever existed show that those states are unnatural. If we were to take out from them those who have made great worldly gain of their godly hermitage and those who have been under the madness of enthusiasm or disappointed hopes in their ambitious projects for the detriment of mankind, perhaps there might not be left ten from Adam to this day.

The form of government is by nature and by right so far left to the individuals of each society that they may alter it from a simple democracy or government of all over all to any other form they please. Such alteration may and ought to be made by express compact. But how seldom this right has been asserted, history will abundantly show. For once that it has been fairly settled by compact, fraud, force, or accident have determined it an hundred times. As the people have gained upon tyrants, these have been obliged to relax only till a fairer opportunity has put it in their power to encroach again.

But if every prince since Nimrod had been a tyrant, it would not prove a right to tyrannize. There can be no prescription old enough to supersede the law of nature and the grant of GOD Almighty, who has given to all men a natural right to be free, and they have it ordinarily in their power to make themselves so if they please ...

In order to form an idea of the natural rights of the colonists, I presume it will be granted that they are men, the common children of the same Creator with their brethren of Great Britain. Nature has placed all such in a state of equality and perfect freedom to act within the bounds of the laws of nature and reason without consulting the will or regarding the humor, the passions, or whims of any other man, unless they are formed into a society or body politic....

The colonists are by the law of nature freeborn, as indeed all men are, white or black. No better reasons can be given for enslaving those of any color than such as Baron Montesquieu has humorously given as the foundation of that cruel slavery exercised over the poor Ethiopians, which threatens one day to reduce both Europe and America to the ignorance and barbarity of the darkest ages. Does it follow that 'tis right to enslave a man because he is black? Will short curled hair like wool instead of Christian hair, as 'tis called by those whose hearts are as hard as the nether millstone, help the argument? Can any logical inference in favor of slavery be drawn from a flat nose, a long or a short face? Nothing better can be said in favor of a trade that is the most shocking violation of the law of nature, has a direct tendency to diminish the idea of the inestimable value of liberty, and makes every dealer in it a tyrant, from the director of an African company to the petty chapman in needles and pins on the unhappy coast. It is a clear truth that those who every day barter away other men's liberty will soon care little for their own.

The colonists, being men, have a right to be considered as equally entitled to all the rights of nature with the Europeans, and they are not to be restrained in the exercise of any of these rights but for the evident good of the whole community.

By being or becoming members of society they have not renounced their natural liberty in any greater degree than other good citizens, and if 'tis taken from them without their consent they are so far enslaved.

I also lay it down as one of the first principles from whence I intend to deduce the civil rights of the British colonies, that all of them are subject to and dependent on Great Britain, and that therefore as over subordinate governments the Parliament of Great Britain has an undoubted power and lawful authority to make acts for the general good that, by naming them, shall and ought to be equally binding as upon the subjects of Great Britain within the realm. This principle, I presume, will be readily granted on the other side the Atlantic. It has been practised upon for twenty years to my knowledge, in the province of the Massachusetts Bay; and I have ever received it that it has been so from the beginning in this and the sister provinces through the continent....

That the colonists, black and white, born here are freeborn British subjects, and entitled to all the essential civil rights of such is a truth not only manifest from the provincial charters, from the principles of the common law, and acts of Parliament, but from the British constitution, which was re-established at the Revolution with a professed design to secure the liberties of all the subjects to all generations....

The liberties of the subject are spoken of as their best birthrights. No one ever dreamed, surely, that these liberties were confined to the realm. At that rate no British subjects in the dominions could, without a manifest contradiction, be declared entitled to all the privileges of subjects born with[in] the realm to all intents and purposes which are rightly given foreigners by Parliament after residing seven years. These expressions of Parliament as well as of the charters must be vain and empty sounds unless we are allowed the essential rights of our fellow subjects in Great Britain.

Now can there be any liberty where property is taken away without consent? Can it with any color of truth, justice, or equity be affirmed that the northern colonies are represented in Parliament? Has this whole continent of near three thousand miles in length, and in which and his other American dominions His Majesty has or very soon will have some millions of as good, loyal, and useful subjects, white and black, as any in the three kingdoms, the election of one member of the House of Commons?

Is there the least difference as to the consent of the colonists whether taxes and impositions are laid on their trade and other property by the crown alone or by the Parliament? As it is agreed on all hands the crown alone cannot impose them, we should be justifiable in refusing to pay them, but must and ought to yield obedience to an act of Parliament, though erroneous, till repealed. I can see no reason to doubt but the imposition of taxes, whether on trade, or on land, or houses, or ships, on real or personal, fixed or floating property, in the colonies is absolutely irreconcilable with the rights of the colonists as British subjects and as men. I say men, for in a state of nature no man can take my property from me without my consent: if he does, he deprives me of my liberty and makes me a slave. If such a proceeding is a breach of the law of nature, no law of society can make it just. The very act of taxing exercised over those who are not represented appears to me to be depriving them of one of their most essential rights as freemen, and if continued seems to be in effect an entire disfranchisement of every civil right....

We all think ourselves happy under Great Britain. We love, esteem, and reverence our mother country, and adore our King. And could the choice of independency be offered the colonies or subjection to Great Britain upon any terms above absolute slavery, I am convinced they would accept the latter. The ministry in all future generations may rely on it that British America will never prove undutiful till driven to it as the last fatal resort against ministerial oppression, which will make the wisest mad, and the weakest strong....

The sum of my argument is: that civil government is of God that the administrators of it were originally the whole people; that they might have devolved it on whom they pleased; that this devolution is fiduciary, for the good of the whole; that by the British constitution this devolution is on the King, Lords and Commons, the supreme, sacred and uncontrollable legislative power not only in the realm but through the dominions; that by the abdication, the original compact was broken to pieces; that by the Revolution it was renewed and more firmly established, and the rights and liberties of the subject in all parts of the dominions more fully explained and confirmed; that in consequence of this establishment and the acts of succession and union, His Majesty GEORGE III is rightful King and sovereign, and, with his Parliament, the supreme legislative of Great Britain, France, and Ireland, and the dominions thereto belonging; that this constitution is the most free one and by far the best now existing on earth; that by this constitution every man in the dominions is a free man; that no parts of His Majesty's dominions can be taxed without their consent; that every part has a right to be represented in the supreme or some subordinate legislature; that the refusal of this would seem to be a contradiction in practice to the theory of the constitution; that the colonies are subordinate dominions and are now in such a state as to make it best for the good of the whole that they should not only be continued in the enjoyment of subordinate legislation but be also represented in some proportion to their number and estates in the grand legislature of the nation; that this would firmly unite all parts of the British empire in the greater peace and prosperity, and render it invulnerable and perpetual.

Townshend Revenue Act (1767)

Through the Townshend Act, British Parliament placed duties on various imports to the American colonies. Paper in every imaginable form was notably targeted, but other items such as tea, earthenware, and fabrics also were included in the duties.

Replacing the Stamp Act, the Townshend Act was expected to yield some 40,000 pounds annually and defray the costs of paying the salaries of the colonial royal governors and judges who managed civil government and the administration of justice. The colonists strongly objected to the act, as evidenced by the subsequent Boston Tea Party and the Boston Massacre.

British Parliament

June 29, 1767

An act for granting certain duties in the British colonies and plantations in America; for allowing a drawback of the duties of customs upon the exportation, from this kingdom, of coffee and cocoa nuts of the produce of the said colonies or plantations; for discontinuing the drawbacks payable on china earthen ware exported to America; and for more effectually preventing the clandestine running of goods in the colonies and plantations.

WHEREAS it is expedient that a revenue should be raised in your Majesty's dominions in America, for making a more certain and adequate provision for defraying the charge of the administration of justice, and the support of civil government, in such provinces where it shall be found necessary; and towards further defraying the expenses of defending, protecting, and securing, the said dominions; we, your Majesty's most dutiful and loyal subjects, the commons of Great Britain, in parliament assembled, have therefore resolved to give and grant unto your Majesty the several rates and duties herein after mentioned; and do most humbly beseech your Majesty that it may be enacted, and be it enacted by the King's most excellent majesty, by and with the advice of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That from and after the twentieth day of November, one thousand seven hundred and sixty seven, there shall be raised, levied, collected, and paid, unto his Majesty, his heirs, and successors, for and upon the respective goods herein after mentioned, which shall be imported from Great Britain into any colony or plantation in America which now is, or hereafter may be, under the dominion of his Majesty, his heirs, or successors, the several rates and duties following; that is to say,

For every hundred weight avoirdupois [a system of weights based on a 16-ounce pound] of crown, plate, flint, and white glass, four shillings and eight pence.

For every hundred weight avoirdupois of green glass, one shilling and two pence.

For every hundred weight avoirdupois of red lead, two shillings.

For every hundred weight avoirdupois of white lead, two shillings.

For every hundred weight avoirdupois of painters colours, two shillings.

For every pound weight avoirdupois of tea, three pence.

For every ream of paper, usually called or known by the name of Atlas Fine, twelve shillings.

For every ream of paper called Atlas Ordinary, six shillings.

For every ream of paper called Bastard, or Double Copy, one shilling and six pence.

For every single ream of blue paper for sugar bakers, ten pence halfpenny.

For every ream of paper called Blue Royal, one shilling and six pence.

For every bundle of brown paper containing forty quires, not made in Great Britain, six pence.

For every ream of paper called Brown Cap, not made in Great Britain, nine pence.

For every ream of paper called Brown Large Cap, made in Great Britain, four pence halfpenny.

For every ream of paper called Small Ordinary Brown, made in Great Britain, three pence.

For every bundle, containing forty quires, of paper called Whited Brown, made in Great Britain, four pence halfpenny.

For every ream of cartridge paper, one shilling and one penny halfpenny.

For every ream of paper called Chancery Double, one shilling and six pence.

For every ream of paper called Genoa Crown Fine, one shilling and one penny halfpenny.

For every ream of paper called Genoa Crown Second, nine pence.

For every ream of paper called German Crown, nine pence.

For every ream of paper called Fine Printing Crown, nine pence.

For every ream of paper called Second Ordinary Printing Crown, six pence three farthings.

For every ream of paper called Crown Fine, made in Great Britain, nine pence.

For every ream of paper called Crown Second, made in Great Britain, six pence three farthings.

For every ream of paper called Demy Fine, not made in Great Britain, three shillings.

For every ream of paper called Demy Second, not made in Great Britain, one shilling and four pence halfpenny.

For every ream of paper called Demy Fine, made in Great Britain, one shilling and one penny halfpenny.

For every ream of paper called Demy Second, made in Great Britain, nine pence.

For every ream of paper called Demy Printing, one shilling and three pence.

For every ream of paper called Genoa Demy Fine, one shilling and six pence.

For every ream of paper called Genoa Demy Second, one shilling and one penny halfpenny.

For every ream of paper called German Demy, one shilling and one penny halfpenny.

For every ream of paper called Elephant Fine, six shillings.

For every ream of paper called Elephant Ordinary, two shillings and five pence farthing.

For every ream of paper called Genoa Fools Cap Fine, one shilling and one penny halfpenny.

For every ream of paper called Genoa Fools Cap Second, nine pence.

For every ream of paper called German Fools Cap, nine pence.

For every ream of paper called Fine Printing Fools Cap, nine pence.

For every ream of paper called Second Ordinary Printing Fools Cap, six pence three farthings.

For every ream of any other paper called Fools Cap Fine, not made in Great Britain, one shilling and ten pence halfpenny.

For every ream of any other paper called Fools Cap Fine Second, not made in Great Britain, one shilling and six pence.

For every ream of paper Fools Cap Fine, made in Great Britain, nine pence.

For every ream of paper called Fools Cap Second, made in Great Britain, six pence three farthings.

For every ream of paper called Imperial Fine, twelve shillings.

For every ream of paper called Second Writing Imperial, eight shillings and three pence.

For every ream of paper called German Lombard, nine pence.

For every ream of paper called Medium Fine, four shillings and six pence.

For every ream of paper called Genoa Medium, one shilling and ten pence halfpenny.

For every ream of paper called Second Writing Medium, three shillings.

For every ream of painted paper, not made in Great Britain, six shillings.

For every ream of paper called Fine Large Post, one shilling and ten pence halfpenny.

For every ream of paper called Small Post, one shilling and one penny halfpenny.

For every ream of paper called Fine Genoa Post, six pence three farthings.

For every ream of paper called Second Genoa Post, six pence three farthings.

For every ream of other paper called Superfine Post, not made in Great Britain, one shilling and six pence.

For every ream of other paper called Second Fine Post, not made in Great Britain, one shilling and one penny halfpenny.

For every ream of paper called Ordinary Post, not made in Great Britain, six pence three farthings.

For every ream of paper called Fine Post, made in Great Britain, nine pence.

For every ream of paper called Second Post, made in Great Britain, four pence halfpenny.

For every ream of paper called Super Royal Fine, nine shillings.

For every ream of paper called Royal Fine, six shillings.

For every ream of paper called Fine Holland Royal, two shillings and five pence farthing.

For every ream of paper called Fine Holland Second, one shilling and six pence.

For every ream of paper called Second Fine Holland Royal, one shilling and six pence.

For every ream of paper called Ordinary Royal, nine pence.

For every ream of paper called Genoa Royal, two shillings and five pence farthing.

For every ream of paper called Second Writing Royal, four shillings and one penny halfpenny.

For every ream of paper called Second Writing Super Royal, six shillings.

For every hundred weight avoirdupois of paste-boards, mill-boards, and scale-boards, not made in Great Britain, three shillings and nine pence.

For every hundred weight avoirdupois of paste-boards, mill-boards, and scale-boards, made in Great Britain, two shillings and three pence.

And for and upon all paper which shall be printed, painted, or stained, in Great Britain, to serve for hangings or other uses, three farthings for every yard square, over and above the duties payable for such paper by this act, if the same had not been printed, painted, or stained; and after those rates respectively for any greater or less quantity.

II. And it is hereby further enacted by the authority aforesaid, That all other paper (not being particularly rated and charged in this act) shall pay the several and respective duties that are charged by this act, upon such paper as is nearest above in size and goodness to such unrated paper.

III. And be it declared and enacted by the authority aforesaid, That a ream of paper, chargeable by this act, shall be understood to consist of twenty quires, and each quire of twenty-four sheets.

IV. And it is hereby further enacted by the authority aforesaid, That the said rates and duties, charged by this act upon goods imported into any British American colony or plantation, shall be deemed, and are hereby declared to be, sterling money of Great Britain; and shall be collected, recovered, and paid to the amount of the value which such nominal sums bear in Great Britain; and that such monies may be received and taken, according to the proportion and value of five shillings and six pence the ounce in silver; and shall be raised, levied, collected, paid, and recovered, in the same manner and form, and by such rules, ways, and means, and under such penalties and forfeitures, as any other duties, now payable to his Majesty upon goods

imported into the said colonies or plantations, may be raised, levied, collected, paid, and recovered, by any act or acts of parliament now in force, as fully and effectually, to all intents and purposes, as if the several clauses, powers, directions, penalties, and forfeitures, relating thereto, were particularly repeated, and again enacted, in the body of this present act: and that all the monies that shall arise by the said duties (except the necessary charges of raising, collecting, levying, recovering, answering, paying, and accounting for the same) shall be applied, in the first place, in such manner as is herein after mentioned, in making a more certain and adequate provision for the charge of the administration of justice, and the support of civil government, in such of the said colonies and plantations where it shall be found necessary; and that the residue of such duties shall be paid into the receipt of his Majesty's exchequer, and shall be entered separate and apart from all other monies paid or payable to his Majesty, his heirs, or successors; and shall be there reserved, to be from time to time disposed of by parliament towards defraying the necessary expences of defending, protecting, and securing, the British colonies and plantations in America.

V. And be it further enacted by the authority aforesaid, That his Majesty and his successors shall be, and are hereby, impowered, from time to time, by any warrant or warrants under his or their royal sign manual or sign manuals, countersigned by the high treasurer, or any three or more of the commissioners of the treasury for the time being, to cause such monies to be applied, out of the produce of the duties granted by this act, as his Majesty, or his successors, shall think proper or necessary, for defraying the charges of the administration of justice, and the support of the civil government, within all or any of the said colonies or plantations.

VI. And whereas the allowing a drawback of all the duties of customs upon the exportation, from this kingdom, of coffee and cocoa nuts, the growth of the British dominions in America, may be a means of encouraging the growth of coffee and cocoa in the said dominions; be it therefore enacted by the authority aforesaid, That from and after the said twentieth day of November, one thousand seven hundred and sixty seven, upon the exportation of any coffee or cocoa nuts, of the growth or produce of any British colony or plantation in America, from this kingdom as merchandize, the whole duties of customs, payable upon the importation of such coffee or cocoa nuts, shall be drawn back and repaid; in such manner, and under such rules, regulations, penalties, and forfeitures, as any drawback or allowance, payable out of the duties of customs upon the exportation of such coffee or cocoa nuts, was, could, or might be paid, before the passing of this act; any law, custom, or usage, to the contrary notwithstanding.

VII. And it is hereby further enacted by the authority aforesaid, That no drawback shall be allowed for any china earthen ware sold, after the passing of this act, at the sale of the united company of merchants of England trading to the East Indies, which shall be entered for exportation from Great Britain to any part of America; any law, custom, or usage, to the contrary notwithstanding.

VIII. And it is hereby further enacted by the authority aforesaid, That if any china earthen ware sold, after the passing of this act, at the sale of the said united company, shall be entered for exportation to any part of America as china earthen ware that had been sold at the sale of the said company before that time; or, if any china earthen ware shall be entered for exportation to any parts beyond the seas, other than to some part of America, in order to obtain any drawback thereon, and the said china earthen ware shall nevertheless be carried to any part of America, and landed there contrary to the true intent and meaning of this act; that then, in each and every such case, the drawback shall be forfeited; and the merchant or other person making such entry, and the master or person taking the charge of the ship or vessel on board which the said goods shall be laden for exportation, shall forfeit double the amount of the drawback paid, or to be paid, for the same, and also treble the value of the said goods; one moiety to and for the use of his Majesty, his heirs, and successors; and the other moiety to such officer of the customs as shall sue for the same; to be prosecuted, sued for, and recovered, in such manner and form, and by the same rules and regulations, as other penalties inflicted for offences against any laws relating to the customs may be prosecuted, sued for, and recovered, by any act or acts of parliament now in force.

IX. And for the more effectual preventing the clandestine running of goods in the British dominions in America, be it further enacted by the authority aforesaid, That from and after the said twentieth day of November, one thousand seven hundred and sixty seven, the master or other person having or taking the charge or command of every ship or vessel arriving in any British colony or plantation in America shall, before he proceeds with his vessel to the place of unloading, come directly to the custom house for the port or district where he arrives, and make a just and true entry, upon oath, before the collector and comptroller, or other principal officer of the customs there, of the burthen, contents, and lading of such ship or vessel, with the particular marks, numbers, qualities, and contents, of every parcel of goods therein laden, to the best of his knowledge; also where and in what port she took in her lading; of what country built; how manned; who was master during the voyage, and who are owners thereof; and whether any, and what goods, during the course of such voyage, had or had not been discharged out of such ship or vessel, and where: and the master or other person having or taking the charge or command of every ship or vessel, going out from any British colony or plantation in America, before he shall take in, or suffer to be taken into or laden on board any such ship or vessel, any goods, wares, or merchandize, to be exported, shall, in like manner, enter and report outwards such ship or vessel, with her name and burthen, of what country built, and how manned, with the names of the master and owners thereof, and to what port or place he intends to pass or sail: and before he shall depart with such ship or vessel out of any such colony or plantation, he shall also bring and deliver unto the collector and comptroller, or other principal officer of the customs at the port or place where he shall lade, a content in writing, under his hand, of the name of every merchant, or other person who shall have laden, or put on board any such ship or vessel, any goods or merchandize, together with the marks and numbers of such goods or merchandize: and such master or person having or taking the charge or command of every such ship or vessel, either coming into, or going out of, any British colony or plantation as aforesaid, whether such ship or vessel shall be laden or in ballast, or otherwise, shall likewise publicly, in the open custom house, to the best of his knowledge, answer upon oath to such questions as shall be demanded of him by the collector and comptroller, or other principal officer of the customs for such port or place, concerning such ship or vessel, and the destination of her voyage, or concerning any goods or merchandize that shall or may be laden on board her, upon forfeiture of one hundred pound sterling money of Great Britain, for each and every default or neglect; to be sued for, prosecuted, recovered, and divided, in the same manner and form, by the same rules and regulations in all respects, as other pecuniary penalties, for offences against the laws relating to the customs or trade of his Majesty's colonies in America, may, by any act or acts of parliament now in force, be prosecuted, sued for, recovered, and divided.

X. And whereas by an act of parliament made in the fourteenth year of the reign of King Charles the Second, intituled, An act for preventing frauds, and regulating abuses, in his Majesty's customs, and several other acts now in force, it is lawful for any officer of his Majesty's customs, authorized by writ of assistance under the seal of his majesty's court or exchequer, to take a constable, headborough, or other public officer inhabiting near unto the place, and in the day-time to enter and go into any house, shop, cellar, warehouse, or room or other place, and, in case of resistance, to break open doors, chests, trunks, and other package there, to seize, and from thence to bring, any kinds of goods or merchandize whatsoever prohibited or uncustomed, and to put and secure the same in his Majesty's store-house next to the place where such seizure shall be made: and whereas by an act made in the seventh and

eight years of the reign of King William the Third, intituled, An act for preventing frauds, and regulating abuses, in the plantation trade, it is, amongst other things, enacted, that the officers for collecting and managing his Majesty's revenue, and inspecting the plantation trade, in America, shall have the same powers and authorities to enter houses or warehouses, to search for and seize goods prohibited to be imported or exported into or out of any of the said plantations, or for which any duties are payable, or ought to have been paid; and that the like assistance shall be given to the said officers in the execution of their office, as, by the said recited act of the fourteenth year of King Charles the Second, is provided for the officers in England: but, no authority being expressly given by the said act, made in the seventh and eighth years of the reign of King William the Third, to any particular court to grant such writs of assistance for the officers of the customs in the said plantations, it is doubted whether such officers can legally enter houses and other places on land, to search for and seize goods, in the manner directed by the said recited acts: To obviate which doubts for the future, and in order to carry the intention of the said recited acts into effectual execution, be it enacted, and it is hereby enacted by the authority aforesaid, That from and after the said twentieth day of November, one thousand seven hundred and sixty seven, such writs of assistance, to authorize and empower the officer of his Majesty's customs to enter and go into any house, warehouse, shop, cellar, or other place, in the British colonies or plantations of America, to search for and seize prohibited or uncustomed goods, in the manner directed by the said recited acts, shall and may be granted by the said superior or supreme courts of justice having jurisdiction within such colony or plantation respectively.

XI. And be it further enacted by the authority aforesaid, That if any action or suit shall be commenced either in Great Britain or America, against any person or persons for any thing done in pursuance of this act, the defendant or defendants in such action or suit may plead the general issue, and give this act, and the special matter, in evidence at any trial to be had thereupon; and that the same was done in pursuance and by the authority of this act: and if it shall appear so to have been done, the jury shall find for the defendant or defendants: and if the plaintiff shall be nonsuited, or discontinue his action after the defendant or defendants shall have appeared, or if judgement shall be given upon any verdict or demurrer against the plaintiff; the defendant or defendants shall recover treble costs, and have the like remedy for the same as defendants have in other cases by law.

CAP. XLVII.

An act for discontinuing the duties on logwood exported; for taking off the duties on Succus Liquoritiæ imported, and for granting other duties in lieu thereof; for explaining such parts of two acts made in the tenth and twelfth years of the reign of Queen Anne, as relate to certain duties on silks, printed, painted, or stained, in Great Britain; for granting a duty upon the exportation of such rice as shall have been imported duty-free, in pursuance of an act made in this session of parliament: and for more effectually preventing the wear of foreign lace and needle work which are prohibited to be imported into this kingdom,

WHEREAS the discontinuing the duty payable upon the exportation of logwood from this kingdom, may be a means of encouraging the importation thereof; May it please your Majesty that it may be enacted, and be it enacted by the King's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That from and after the twentieth day of July, one thousand seven and sixty seven, the duty now payable upon logwood, exported from this kingdom to any parts beyond the seas, shall cease, determine, and be no longer paid or payable; any law, custom or usage, to the contrary notwithstanding.

II. Provided always, and it is hereby further enacted by the authority aforesaid, That due entries shall be made at the custom-house of all such logwood, upon which the duty is taken off by this act; and such logwood shall be shipped outwards in the presence of the proper officers of the customs appointed for that purpose; and the exportation thereof shall be in British built ships or vessels, navigated according to law; and the said logwood shall be liable to the same duty as if this act had never been made; any thing herein before contained to the contrary notwithstanding.

III. And whereas Succus Liquoritiæ is rated in the book of rates made in the twelfth year of the reign of King Charles the Second, at one shilling per pound weight; according to which value, the duties now payable upon Succus Liquoritiæ, imported into this kingdom, amount to seven pounds, two shillings, and six pence, for every hundred weight thereof: and whereas it has been found, by experience, that the said duties are too high; which has induced many persons to import clandestinely great quantities of such Succus Liquoritiæ, to the prejudice of the revenue and the fair trader: For remedy whereof, be it enacted by the authority aforesaid, That from and after the twentieth day of July, one thousand seven hundred and sixty seven, the several duties payable upon the importation of Succus Liquoritiæ shall cease, determine, and be no longer paid; and in lieu thereof, there shall be paid and payable to his Majesty, his heirs, and successors, for every hundred weight avoirdupois of Succus Liquoritiæ, which from and after the said twentieth day of July, one thousand seven hundred and sixty seven, shall be imported into Great Britain, the sum of thirty shillings.

IV. And it is hereby further enacted by the authority aforesaid, That the said duty by this act granted shall be paid down in ready money, without any discount or allowance; and shall not be afterwards drawn back or repaid upon the exportation of the same goods; and shall be raised, levied, collected, and paid, in the same manner and form, and by such rules, ways, and means, and under such penalties and forfeitures, as the duties upon Succus Liquoritiæ hereby determined, or any of them, might have been raised, levied, recovered, and paid, if the same, or any of them, had continued.

V. And it is hereby enacted by the authority aforesaid, That the duties to arise upon the importation of Succus Liquoritiæ pursuant to this act (the necessary charges of management excepted) shall be appropriated and applied, as near as may be, to the same uses and purposes as the present duties upon drugs, rated by the book of rates made in the twelfth year of the reign of King Charles the Second, are applicable, or ought to be applied.

VI. And whereas by an act passed in the tenth year of the reign of her late majesty Queen Anne, intituled, An act for laying several duties upon all sope and paper made in Great Britain, or imported into the same; and upon chequered and striped linen imported; and upon certain silks, calicoes, linens, and stuffs, printed, painted, or stained; and upon several kinds of stamp vellum, parchment, and paper, and upon certain printed papers, pamphlets, and advertisements; for raising the sum of one million eight hundred thousand pounds, by way of a lottery, towards her Majesty's supply; and for licensing an additional number of hackney chairs; and for charging certain stocks of cards and dice; and for better securing her Majesty's duties to arise in the office of stamp duties by licences for marriages, and otherwise; and for relief of persons who have not claimed their lottery tickets in due time, or have lost exchequer bills or lottery tickets; and for borrowing money upon stock (part of the capital of the South Sea company) for the use of the public; it is, amongst other things, enacted, that there should be raised, levied, collected, and paid, to and for the use of her Majesty her heirs, and successors, for and upon all silks, calicoes, linens, and stuffs, of what kind soever, which, at any time or times, within or during the term of thirty two years, to be reckoned from the twentieth day of July, one thousand seven hundred and twelve, should be printed, stained, painted, or dyed, in Great Britain (such calicoes, linens, and fustians, as should be dyed throughout of one colour only; and stuffs made of woollen, or whereof the greatest part in value should be

woollen; always excepted) the several and respective rates and duties herein after expressed (over and above the duties payable upon the importation of them, or any of them) that is to say,

For and upon all silks so printed, stained, or painted, in Great Britain (silk handkerchiefs excepted) the sum of six pence for every yard in length, reckoning half a yard for the breadth.

And for all silk handkerchiefs so printed, stained, or painted, in Great Britain, the sum of three pence for every yard square; and in those proportions for wider or narrower silks.

And whereas by an act passed in the third year of the reign of his late majesty King George the First, intituled, An act for redeeming the duties and revenues which were settled to pay off principal and interest on the orders made forth at four lottery acts passed in the ninth and tenth years of her late Majesty's reign; and for redeeming certain annuities payable on orders out of the hereditary excise, according to a former act in that behalf; and for establishing a general yearly fund, not only for the future payment of annuities at several rates, to be payable and transferrable at the bank of England, and redeemable by parliament, but also to raise monies for such proprietors of the said orders as shall choose to be paid their principal and arrears of interest in ready money; and for making good such other deficiencies and payments as in this act are mentioned; and for taking off the duties on linseed imported, and British linen exported; the said several rates and duties are made perpetual: And whereas by an act of parliament made in the twelfth year of the reign of her said late majesty Queen Anne, intituled, An act for laying additional duties on sope and paper; and upon certain linens, silks, calicoes, and stuffs; and upon starch, and exported coals; and upon stamp vellum, parchment, and paper, for raising one million four hundred thousand pounds, by way of a lottery, for her Majesty's supply; and for allowances on exporting made wares of leather, sheep skins, and lamb skins; and for distribution of four thousand pounds due to the officers and seamen for gun money; and to adjust the property of tickets in former lotteries; and touching certain shares of stock in the capital of the South Sea company; and for appropriating the monies granted to her Majesty; it is, amongst other things, enacted, That there should be raised, levied, collected, and paid, to and for the use of her Majesty, her heirs, and successors, for and upon all silks, calicoes, linens, and stuffs, of what kind soever, which, at any time or times within or during the term of thirty two years, to be reckoned from the second day of August, one thousand seven hundred and fourteen, should be printed, stained, painted, or dyed, in Great Britain (such calicoes, linens, and fustians, as shall be dyed throughout of one colour only; and stuffs made of woollen, or whereof the greatest parts in value shall be woollen; always excepted) the several and respective rates and duties therein and herein after expressed (over and above all other duties payable for the same, or any of them) that is to say,

For and upon all silks so printed, stained, or painted, within or during the term aforesaid, in Great Britain (silk handkerchiefs excepted) the sum of six pence for every yard in length, reckoning half a yard for the breadth.

And for all silk handkerchiefs so printed, stained, or painted, within or during the term aforesaid, in Great Britain, the sum of one penny for every yard square; and in those proportions for wider or narrower silks.

And whereas by an act of parliament made in the sixth year of the reign of his said late majesty King George the First, intituled, An act for enabling the South Sea company to encrease their present capital and fund, by redeeming such publick debts and incumbrances as are therein mentioned; and for raising money, to be applied for lessening several of the publick debts and incumbrances; and for calling in the present exchequer bills remaining uncanceled; and for making forth new bills in lieu thereof, to be circulated and exchanged upon demand at or near the exchequer; the said several rates and duties last mentioned are made perpetual: And whereas some doubts have arisen, whether ribbands and silks so printed, stained, or painted, being less than half a yard in breadth, are within the meaning of the said recited acts, and liable to the said several rates and duties by the said acts imposed: Now, for obviating all such doubts, be it declared by the authority aforesaid, That all ribbands and silks printed, stained, or painted, in Great Britain, though less than half a yard in breadth, are, within the true intent and meaning of the said acts, liable to the several rates and duties by the said two first mentioned acts imposed, according to the proportions in which such ribbands or silks are or shall be made.

VII. And whereas by an act made in this present session of parliament, intituled, An act for allowing the free importation of rice, sago powder, and vermicelli, into this kingdom, from his Majesty's colonies in North America, for a limited time, it is, amongst other things, enacted, That it shall and may be lawful for any person or persons to import into Great Britain, from any of his Majesty's colonies in North America, at any time or times before the first day of December, one thousand seven hundred and sixty seven, any rice, without the payment of any subsidy, custom, duty, or imposition whatsoever: Now, to the end the advantage intended to this kingdom, by the said recited act, may not be evaded by the exportation of such rice into foreign parts; we your Majesty's most dutiful and loyal subjects the commons of Great Britain, in parliament assembled, do give and grant unto your Majesty, and do humbly beseech your Majesty that it may be enacted; and be it enacted by the authority aforesaid, That for and upon all rice which hath been or shall be, imported into this kingdom duty-free, by virtue of the said recited act, and which shall be again exported thereout, there shall be paid and answered to his Majesty, his heirs, and successors, a subsidy of poundage of six pence in the pound, according to the value or rate set upon rice imported, in the book of rates referred to by the act of the twelfth year of King Charles the Second; which said subsidy of six pence in the pound upon such rice so exported, shall be raised, levied, collected, and recovered, by such ways and means, and under such rules, regulations, penalties, and forfeitures, as the subsidy or poundage for any goods or merchandizes exported from Great Britain may be raised, levied, collected, or recovered, by any act of parliament now in force, as fully and effectually, to all intents and purposes, as if the several clauses, powers, directions, penalties, and forfeitures, relating thereto, were particularly repeated and again enacted into the body of this present act.

VIII. And be it further enacted by the authority aforesaid, That the said duties granted by this act upon rice exported shall (the necessary charges of management excepted) be paid into the receipt of his Majesty's exchequer, and be there reserved for the disposition of parliament.

IX. And whereas the permitting foreign lace made of silk or thread and foreign needle-work, to be worn or used in Great Britain, after the same had been seized and condemned, gives the unfair dealer in those commodities, opportunity to secure from seizures great quantities thereof, which are clandestinely imported: Now to prevent a practice so very prejudicial to the publick revenue, and the manufacturers of such goods in this kingdom; be it therefore enacted by the authority aforesaid, That from and after the seventh day of July, one thousand seven hundred and sixty seven, no foreign lace made of silk or thread, or foreign needle-work, which shall have been, or shall be, seized and condemned in Great Britain, for any cause of forfeiture, shall be sold or delivered out of any custom-house warehouse wherein the same shall be secured, otherwise than on condition to be exported under the like securities, regulations, and restrictions, penalties, and forfeitures, as are prescribed by law, for the due exportation of East India goods prohibited to be worn or used in Great Britain; any law, custom, or usage to the contrary notwithstanding.

X. And be it further enacted by the authority aforesaid, That if any action or suit shall be commenced against any person or persons for any thing done in pursuance of this act, the defendant or defendants, in any such action or suit, may plead the general issue, and give this act, and the special matter, in evidence, at any trial to be had thereupon; and that the same was done in pursuance and by the authority of this act; and if it shall appear so to have been done, the jury shall find for the defendant or defendants; and if the plaintiff shall be nonsuited, or discontinue his action after the defendant or defendants shall have appeared; or if judgement shall be given upon any verdict or demurrer against the plaintiff; the defendant or defendants shall recover treble costs, and have the like remedy for the same, as any defendant or defendants hath or have in other cases by law.

Newspaper Account of the Boston Massacre (1770)

Festering antagonisms between the Boston populace and British troops, sent to keep order and enforce the Townshend Acts, culminated in an incident in which five individuals were killed. A shocked citizenry objected to the peacetime presence of the troops and demanded their removal.

THE Town of Boston affords a recent and melancholy Demonstration of the destructive consequences of quartering troops among citizens in time of Peace, under a pretence of supporting the laws and aiding civil authority; every considerate and unprejudic'd Person among us was deeply impress'd with the apprehension of these consequences when it was known that a number of regiments were ordered to this town under such a pretext, but in reality to enforce oppressive measures; to awe and controul the legislative as well as executive power of the province, and to quell a spirit of liberty, which however it may have been basely opposed and even ridicul'd by some, would do honour to any age or country. A few persons among us had determin'd to use all their influence to procure so destructive a measure, with a view to their securely enjoying the profits of an American revenue, and unhappily both for Britain and this country, they found means to effect it.

It is to Governor Bernard, the commissioners, their confidants and coadjutors, that we are indebted as the procuring cause of a military power in this capital.—The Boston Journal of Occurrences printed in Mr. Holt's York Journal, from time to time, afforded many striking instances of the distresses brought upon the inhabitants by this measure; and since those Journals have been discontinued, our troubles from that quarter have been growing upon us: We have known a party of soldiers in the face of day fire off a loaded musket upon the inhabitants, others have been prick'd with bayonets, and even our magistrate assaulted and put in danger of their lives, where offenders brought before them have been rescued and why those and other bold and base criminals have as yet escaped the punishment due to their crimes, may be soon matter of enquiry by the representative body of this people.—It is natural to suppose that when the inhabitants ... saw those laws which had been enacted for their security, and which they were ambitious of holding up to the soldiery, eluded, they should most commonly resent for themselves—and accordingly if so has happened; many have been the squabbles between them and the soldiery; but it seems their being often worsted by our youth in those encounters, has only serv'd to irritate the former.—What passed at Mr. Gray's rope walk, has already been given the public, and may be said to have led the way to the late catastrophe.—That the rope walk lads when attacked by superior numbers should defend themselves with so much spirit and success in the club-way, was too mortifying, and perhaps it may hereafter appear, that even some of their officers, were unhappily affected with this circumstance: Divers stories were propagated among the soldiery, that serv'd to agitate their spirits particularly on the Sabbath, that one Chambers, a serjeant, represented as a sober man, had been missing the preceding day, and must therefore have been murdered by the townsmen; an officer of distinction so far credited this report, that he enter'd Mr. Gray's rope-walk that Sabbath; and when enquired of by that gentleman as soon as he could meet him, the occasion of his so doing, the officer reply'd, that it was to look if the serjeant said to be murdered had not been hid there; this sober serjeant was found on the Monday unhurt in a house of pleasure.—The evidences already collected shew that many threatnings had been thrown out by the soldiery, but we do not pretend to say there was any preconcerted plan; when the evidences are published, the world will judge.—We may however venture to declare, that it appears too probable from their conduct, that some of the soldiery aimed to draw and provoke the townsmen into squabbles, and that they then intended to make use of other weapons than canes, clubs or bludgeons,

Our readers will doubtless expect a circumstantial account of the tragical affair on Monday night last; but we hope they will excuse our being so particular as we should have been, had we not seen that the town was intending an inquiry and full representation thereof.

On the evening of Monday, being the 5th current, several soldiers of the 29th regiment were seen parading the streets with their drawn cutlasses.... A few minutes after nine o'clock, four youths, named Edward Archbald, William Merchant, Francis Archbald, and John Leech, jun. came down Cornhill together, and separated at Doctor Loring's corner, the two former were passing the narrow alley leading to Murray's barrack, in which was a soldier brandishing a broad sword of an uncommon size against the walls, but of which he struck fire plentifully. A person of mean countenance armed with a large cudgel bore him company. Edward Archbald admonished Mr. Merchant to take care of the sword, on which the soldier turned round and struck Archbald on the arm, then push'd at Merchant and pierced thro' his clothes inside the arm close to the arm pit and grazed the skin. Merchant then struck the soldier with a short stick he had; and the other person ran to the barrack and brought with him two soldiers, one armed with a pair of tongs, the other with a shovel. He with the tongs pursued Archbald back through the alley, collar'd and laid him over the head with the tongs. The noise brought people together, and John Hix a young lad, coming up, knock'd the soldier down, but let him get up again; and more lads gathering, drove them back to the barrack, where the boys stood some time as it were to keep them in. In less than a minute 10 or 12 of them came out with drawn cutlasses, clubs, and bayonets, and set upon the unarmed boys and young folks, who stood them a little while but, finding the inequality of their equipment, dispersed.—

On hearing the noise, one Samuel Atwood, came up to see what was the matter, and entering the alley from dock square, heard the latter part of the combat, and when the boys dispersed he met the 10 or 12 soldiers aforesaid rushing down the alley towards the square, and asked them if they intended to murder the people? They answered Yes, by G—d, root and branch! With that one of them struck Mr. Atwood with a club, which was repeated by another and being unarmed, he turned to go off, and received a wound on the left shoulder which reached the bone and gave him much pain. Retreating

a few steps Mr. Atwood met two officers and said, Gentlemen what is the matter? They answered, you'll see by and by. Immediately after, those heroes appeared in the square, asking where were the boogers? where were the cowards? But notwithstanding their fierceness to naked men, one of them advanced towards a youth who had a split of a raw stave in his hand, and said damn them here is one of them.... But the young man seeing a person near him with a drawn sword and a good cane ready to support him, held up his stave in defiance, and they quietly passed by him, up the little alley by Mr. Silsby's to King Street, where they attacked single and unarmed persons till they raised much clamour, and then turned down Cornhill street insulting all they met in like manner, and pursuing some to their very doors.

Thirty or forty persons, mostly lads, being by this means gathered in Kingstreet, Capt. Preston with a party of men with charged bayonets, came from the main guard to the Commissioner's house the soldiers pushing their bayonets, crying, Make way! They took place by the custom-house, and continuing to push, to drive the people off, pricked some in several places; on which they were clamorous, and, it is said, threw snow balls. On this, the Captain commanded them to fire, and more snow balls coming, he again said, Damn you, Fire, be the consequence what it will! One soldier then fired, and a townsman with a cudgel struck him over the hands with such force that he dropt his firelock; and rushing forward aimed a blow at the Captain's head, which graz'd? hat and fell pretty heavy upon his arm: However, the soldiers continued the fire, successively, till 7 or 8, or as some say, 11 guns were discharged.

By this fatal manoeuvre, three men were laid dead on the spot, and two more struggling for life; but what shewed a degree of cruelty unknown to British troops, at least since the house of Hanover has directed their operations, was an attempt to fire upon, or push with their bayonets the persons who undertook to remove the slain and wounded!

Mr. Benjamin Leigh, now undertaker in Delph Manufactory, came up, and after some conversation with Capt. Preston, relative to his conduct in this affair, advised him to draw off his men, with which he complied.

The dead are Mr. Samuel Gray, killed on the spot, the ball entering his head and beating off a large portion of his skull.

A mulatto man, named Crispus Attucks, who was born in Framingham, but lately belonged to New Providence and was here in order to go for North Carolina, also killed instantly; two balls entering his breast, one of them in special goring the right lobe of the lungs, and a great part of the liver most horribly.

Mr. James Caldwell, mate of Capt. Morton's vessel, in like manner killed by two balls entering his back.

Mr. Samuel Maverick, a promising youth of 17 years of age, son of the widow Maverick, and an apprentice of Mr. Greenwood, Ivory Turner, mortally wounded; a ball went through his belly, and was cut out at his back: He died the next morning.

A lad named Christopher Monk, about 17 years of age, an apprentice to Mr. Walker, Shipwright, wounded, a ball entered his back about 4 inches above his left kidney, near the spine, and was cut out of the breast on the same side. Apprehended he will die.

A lad named John Clark, about 17 years of age, whose parents live at Medford, and an apprentice to Capt. Samuel Howard of this town; wounded, a ball entered just above his groin and came out at his hip, on the opposite side. Apprehended he will die.

Mr. Edward Payne, of this town, merchant, standing at his entry door, received a ball in his arm, which shattered some of the bones.

Mr. John Green, Taylor, coming up Leverett's Lane, received a ball just under his hip, and lodged it in the under part of his thigh, which was extracted[.]

Mr. Robert Patterson, a seafaring man, who was the person that had his trowsers shot through in Richardson's affair, wounded; a ball went through his right arm, and he suffered great loss of blood.

Mr. Patrick Carr, about 30 years of age, who work'd with Mr. Field, Leather-Breeches maker in Queen-street, wounded; a ball enter'd near his hip, and went out at his side.

A lad named David Parker, an apprentice to Mr. Eddy the Wheelwright, wounded; a ball enter'd in his thigh.

The people were immediately alarmed with the report of this horrid massacre, the bells were set a ringing, and great numbers soon assembled at the place where this tragical scene had been acted; their feelings may be better conceived than expressed; and while some were taking care of the dead and wounded, the rest were in consultation what to do in these dreadful circumstances.

But so little intimidated were they, notwithstanding their being within a few yards of the main-guard, and seeing the 29th regiment under arms, and drawn up in King-street; that they kept their station, and appear'd as an officer of rank express'd it, ready to run upon the very muzzles of their muskets.—The Lieut. Governor soon came into the Town House, and there met some of his Majesty's Council, and a number of civil Magistrates; a considerable body of people immediately enter'd the Council chamber and expressed themselves to his Honour with a freedom and warmth becoming the occasion. He used his utmost endeavours to pacify them, requesting that they would let the matter subside for the night, and promised to do all in his power that justice should be done, and the law have its course; men of influence and weight with the people were not wanting on their part to procure their compliance with his Honour's request, by representing the horrible consequences of a promiscuous and rash engagement in the night, and assuring them that such measures should be entered upon in the morning, as would be agreeable to their dignity, and more likely way of obtaining the best satisfaction for the blood of their fellow-townsmen.—The inhabitants attended to these suggestions, and the regiment under arms being ordered to the barracks which was insisted upon by the people, they then separated and return'd to their dwellings, by one o'clock. At 3 o'clock Capt. Preston was committed, as were the soldiers who fir'd, a few hour after him.

Tuesday morning presented a most shocking scene, the blood of our fellow-citizens running like water thro' King-street, and the Merchant's Exchange, the principal spot of the military parade for about 18 months past. Our blood might also be track'd up to the head of Long-Lane, and thro' divers other streets and passages.

At eleven o'clock, the inhabitants met at Faneuil Hall, and after some animated speeches, becoming the occasion, they chose a Committee of 15

respectable Gentlemen, to wait upon the Lieut. Governor in Council, to request of him to issue his orders for the immediate removal of the troops....

On the Death of the Rev. Mr. George Whitefield (1770)

George Whitefield was a charismatic, evangelistic, English minister whose American tours stimulated the "Great Awakening" of religious revivals throughout the colonies. Phillis Wheatley, an educated black servant in a prominent Boston household, became widely known for her poem commemorating Whitefield. She is remembered as the first published African American writer in the colonies.

Hail, happy saint, on thine immortal throne,
Possess of glory, life, and bliss unknown;
We hear no more the music of thy tongue,
Thy wonted auditories cease to throng.
Thy sermons in unequal'd accents flow'd,
And ev'ry bosom with devotion glow'd;
Thou didst in strains of eloquence refin'd
Inflame the heart, and captivate the mind.
Unhappy we the setting sun deplore,
So glorious once, but ah! it shines no more.
Behold the prophet in his tow'ring flight!
He leaves the earth for heav'n's unmeasur'd height,
And worlds unknown receive him from our sight.
There *Whitefield* wings with rapid course his way,
And sails to *Zion* through vast seas of day.
Thy pray'rs, great saint, and thine incessant cries
Have pierc'd the bosom of thy native skies.
Thou moon hast seen, and all the stars of light,
How he has wrestled with his God by night.
He pray'd that grace in ev'ry heart might dwell,
He long'd to see America excel;
He charg'd its youth that ev'ry grace divine
Should with full lustre in their conduct shine;
That Saviour, which his soul did first receive,
The greatest gift that ev'n a God can give,
He freely offer'd to the num'rous throng,
That on his lips with list'ning pleasure hung.
"Take him, ye wretched, for your only good,
"Take him, ye starving sinners, for your food;
"Ye thirsty, come to this life-giving stream,
Ye preachers, take him for your joyful theme;" "Take him, my dear *Americans*," he said,
"Be your complaints on his kind bosom laid:
Take him, ye *Africans*, he longs for you,"
Impartial Saviour is his title due
"Was'd in the fountain of redeeming blood," "You shall be son, and kings, and priests to God."
Great *Countess*, we *Americans* revere
Thy name, and mingle in thy grief sincere; *New England* deeply feels, the *Orphans* mourn
Their more than father will no more return.
But, though arrested by the hand of death, *Whitefield* no more exerts his lab'ring breath,
Yet let us view him in th' eternal skies,
Let ev'ry heart to this bright vision rise;
While the tomb safe retains its sacred trust,
Till life divine re-animates his dust.

On Being Brought from Africa to America (early 1770s)

Internationally recognized even in her own lifetime, the African-born poet Phillis Wheatley was the slave of Boston tailor John Wheatley until he freed her in 1773. That same year, her first book of poetry was published in London.

In the following poem, Wheatley says it was mercy that brought her from a pagan land—Africa—to one where she could learn of Christianity. Some scholars have argued that Wheatley, while seeming to endorse her forced transport to America, was, in fact, using irony to comment on a situation that brought her to slavery but also to her cherished Christian faith.

Twas mercy brought me from my *Pagan* land,
Taught my benighted soul to understand
That there's a God, that there's a *Saviour* too:
Once I redemption neither sought nor knew.
Some view our sable race with scornful eye,
"Their colour is a diabolic die."
Remember, *Christians*, *Negroes*, black as *Cain*, May be refin'd, and join th' angelic train.

A Tutor and his Pupils (1773–1774)

Philip Fitian was employed as a tutor in the home of Councillor Robert Carter in Westmoreland County, Virginia. Fitian had graduated from Princeton College in 1770 in the same class as Aaron Burr, intending to enter the ministry. When he took a temporary tutoring position with the Carter family, he was surprised at the elegant, cultured lifestyle he encountered. Fitian's journal gives an account of life in a gentleman's household, the education of his children, and the recreational activities of his family and neighbors.

Monday, November 1. We began school. The school consists of eight. Two of Mr. Carters sons, one nephew, and five daughters. The eldest son is reading Sallust; grammatical exercises, and Latin grammar. The second son is reading English grammar, and reading English writing, and ciphering in subtraction. The nephew is reading and writing as above; and ciphering in reduction. The eldest daughter is reading the Spectator, writing, and beginning to cipher. The second is reading now out of the spelling-book, and beginning to write. The next is reading in the spelling-book. The fourth is spelling in the beginning of the spelling-book. And the last is beginning her letters.

Thursday, November 25. Rode this morning to Richmond Courthouse, where two horses ran for a purse of 500 pounds: besides small bets almost innumerable. One of the horses belonged to Colonel John Tayloe, and is called Yorick; the other to Dr. Flood, and is called Gift. The Assembly was remarkably numerous; beyond my expectation and exceedingly polite in general. The horses started precisely at five minutes after three; the course was one mile in circumference, they performed the first round in two minutes, the third in two minutes and a half. Yorick came out the fifth time round about 40 rods ahead of Gift; both horses, when the riders dismounted proved very lame; they ran five miles, and carried 180 pounds ...

Almost every lady wears a red cloak; and when they ride out they tie a red handkerchief over their head and face, so that when I first came into Virginia, I was distressed whenever I saw a lady, for I thought she had the toothache. The people are extremely hospitable, and very polite, both of which are most certainly universal characteristics of the gentlemen in Virginia. Some swear bitterly, but the practice seems to be generally disapproved. I have heard that this country is notorious for gaming; however that may be, I have not seen a pack of cards, nor a die, since I left home, nor gaming nor betting of any kind except at the Richmond-race. Almost every gentleman of condition, keeps a chariot and four; many drive with six horses. I observe that all the merchants and shopkeepers in the sphere of my acquaintance are young Scotchmen, several of whom I know ... It has been the custom heretofore to have all their tutors, and schoolmasters from Scotland, tho' they begin to be willing to employ their own countrymen.

In the evening Ben Carter and myself had a long dispute on the practice of fighting. He thinks it best for two persons who have any dispute to go out in good-humour and fight manfully, and says that they will be sooner and longer friends than to brood and harbour malice. Mr. Carter is practicing this evening on the guitar. He has here at home a harpsichord, forte-piano, harmonica, guitar, violin, and German flutes, and at Williamsburg, he has a good pipe organ.

In the morning so soon as it is light a boy knocks at my door to make a fire; after the fire is kindled, I rise which now in the winter is commonly by seven, or a little after. By the time I am drest the children commonly enter the school-room, which is under the room I sleep in; I hear them round one lesson, when the bell rings for eight o'clock (for Mr. Carter has a large good bell which may be heard some miles, and this is always rung at meal times;) the children then go out; and at half after eight the bell rings for breakfast, we then repair to the dining-room; after breakfast, which is generally about half after nine, we go into school, and sit till twelve, when the bell rings, and they go out for noon; the dinner-bell rings commonly about half after two, often at three, but never before two. After dinner is over, which in common, when we have no company, is about half after three we go into school, and sit till the bell rings at five, when they separate till the next morning. We go into supper commonly about half after eight or at nine and I usually go to bed between ten and eleven.

Saturday, December 18. After breakfast, we all retired into the dancing room, and after the scholars had their lesson singly round Mr. Christian, very politely, requested me to step a minuet; I excused myself, however, but signified my peculiar pleasure in the accuracy of their performance. There were

several minuets danced with great ease and propriety; after which the whole company joined in country-dances, and it was indeed beautiful to admiration, to see such a number of young persons, set off by dress to the best advantage, moving easily, to the sound of well performed music, and with perfect regularity, tho' apparently in the utmost disorder. The dance continued till two, we dined at half after three. Soon after dinner we repaired to the dancing-room again; I observe in the course of the lessons, that Mr. Christian is punctual, and rigid in his discipline, so strict indeed that he struck two of the young Misses for a fault in the course of their performance, even in the presence of the mother of one of them! And he rebuked one of the young fellows so highly as to tell him he must alter his manner, which he had observed through the course of the dance, to be insolent, and wanton, or else absent himself from the school. I thought this a sharp reproof to a young gentleman of seventeen, before a large number of ladies! Nothing is now to be heard of in conversation, but the balls, the fox-hunts, the fine entertainments, and the good fellowship, which are to be exhibited at the approaching Christmas. Mr. Goodlet was barred out of his school last Monday by his scholars, for Christmas holidays, which are to continue till twelfth-day; but my scholars are of a more quiet nature, and have consented to have four or five days now, and to have their full holiday in May next, when I propose by the permission of Providence to go home, where I hope to see the good and benevolent Laura.

When the candles were lighted, we all repaired, for the last time, into the dancing-room; first each couple danced a minuet; then all joined as before in the country dances, these continued till half after seven when at the proposal of several, we played Button, to get pawns for redemption; here I could join with them, and indeed it was carried on with sprightliness, and decency; in the course of redeeming my pawns I had several kisses of the ladies!

Half after eight we were rung in to supper. The room looked luminous and splendid; four very large candles burning on the table where we supped; three others in different parts of the room; a gay, sociable assembly, and four well instructed waiters! So soon as we rose from supper, the company formed into a semicircle round the fire, and Mr. Lee, by the voice of the Company was chosen Pope and the rest of the company were appointed Friars, in the Play called "Break the Pope's Neck." Here we had great diversion in the respective judgments upon offenders, but we were all dismissed by ten, and retired to our several rooms.

Saturday, December 25. I was waked this morning by guns fired all round the house. The morning is stormy, the wind at south east and it rains hard. Nelson the boy who makes my fire, blacks my shoes, does errands, &c. was early in my room ... He made me a vast fire, blacked my shoes, set my room in order, and wished me a joyful Christmas, for which I gave him half a bit. Soon after he left the room and before I was drest, the fellow who makes the fire in our school room, dressed very neatly in green, but almost drunk, entered my chamber with three or four profound bows, and made me the same salutation; I gave him a bit, and dismissed him as soon as possible. Soon after my clothes and linen were sent in with a message for a Christmas box, as they call it; I sent the poor slave a bit, and my thanks. I was obliged for want of small change, to put off for some days the barber who shaves and dresses me.

There were at table Mrs. Carter and her five daughters that are at school with me Miss Priscilla, Nancy, Fanny, Betsy, and Harriot, five as beautiful delicate, well-instructed children as I have ever known! Ben is abroad; Bob and Harry are out.

Ben, the eldest, is a youth of genius: of warm impetuous disposition; desirous of acquiring knowledge, docile, vastly inquisitive and curious in mercantile, and mechanical matters, very fond of horses and takes great pleasure in exercising them.

Bob, the other brother, is by no means destitute of capacity. He is extremely volatile and unsettled in his temper, which makes it almost wholly impossible to fix him for any time to the same thing, on which account he has made but very little advancement in any one branch of study, and this is attributed to barrenness of genius. He is slovenly, clumsy, very fond of shooting, of dogs, and of horses, but a very stiff rider, good natured, pleased with the society of persons much below his family, and estate and tho' quick and wrathful in his temper, yet he is soon moderated, and easily subdued.

Harry, the nephew, is rather sullen in his make. He is obstinate, tho' steady, and makes a slow uniform advance in his learning, he is vastly kind to me, but in particular to my horse.

Miss Priscilla, the eldest daughter, about 16 years old, is steady, studious, docile, quick of apprehension, and makes good progress in what she undertakes; she is small of her age, has a mild winning presence, a sweet obliging temper, never swears, which is here a distinguished virtue, dances finely, plays well on keyed instruments, and is on the whole in the first class of the female sex.

Nancy, the second, is not without some few of those qualities which are by some (I think with great ill-nature, and with little or no truth) said to belong intirely to the fair sex. I mean great curiosity, eagerness for superiority, and or in friendship, but bitterness and rage where there is enmity. She is not constant in her disposition, nor diligent nor attentive to her business. But she has her excellencies; she is cheerful, tender in her temper, easily managed by perswasion, and is never without what seems to have been a common gift of Heaven to the fair-sex, readiness of expression!

Fanny, the next, is in her person, according to my judgment the flower of the family. She has a strong resemblance to her Mamma, who is an elegant, beautiful woman. Miss Fanny seems to have a remarkable sedateness, and simplicity in her countenance, which is always rather cheerful than melancholy; she has nothing with which we can find fault in her person, but has something in the features of her face which insensibly pleases us, and always when she is in sight draws our attention, and much the more because there seems to be for every agreeable feature a corresponding action which improves and adorns it.

Betsy, the next, is young, quiet, and obedient.

Harriet is bold, fearless, noisy and lawless; always merry, almost never displeased; she seems to have a heart easily moved by the force of music; she has learned many tunes and can strike any note, or succession of notes perfectly with the flute or harpsichord, and is never wearied with the sound of music either vocal or instrumental.

These are the persons who are at present under my direction, and whose general character I have very imperfectly attempted to describe.

The Boston Port Act (1774)

The Boston Port Act was the first of five so-called Intolerable Acts passed by British Parliament to punish Boston for its famous Tea Party. Through this act, the port of Boston was closed to all commerce, except for food and fuel. Reopening the port was predicated on payment of damages sustained by the East India Company and all other losses resulting from the riots of 1773 and 1774.

[March 31, 1774]

WHEREAS dangerous commotions and insurrections have been fomented and raised in the town of Boston, in the province of Massachusetts Bay, in New England, by divers ill-affected persons, to the subversion of his Majesty's government, and to the utter destruction of the publick peace, and good order of the said town; in which commotions and insurrections certain valuable cargoes of teas, being the property of the East India Company, and on board certain vessels lying within the bay or harbour of Boston, were seized and destroyed: And whereas, in the present condition of the said town and harbour, the commerce of his Majesty's subjects cannot be safely carried on there, nor the customs payable to his Majesty duly collected; and it is therefore expedient that the officers of his Majesty's customs should be forthwith removed from the said town: May it please your Majesty that it may be enacted; and be it enacted by the King's most excellent majesty, by and with the advice and consent of the lords spiritual and temporal, and commons, in this present parliament assembled, and by the authority of the same, That from and after the first day of June, one thousand seven hundred and seventy-four, it shall not be lawful for any person or persons whatsoever to lade put, or cause or procure to be laden or put, off or from any quay, wharf, or other place, within the said town of Boston, or in or upon any part of the shore of the bay, commonly called The Harbour of Boston, between a certain headland or point called Nahant Point, on the eastern side of the entrance into the said bay, and a certain other headland or point called Alderton Point, on the western side of the entrance into the said bay, or in or upon any island, creek, landing place, bank, or other place, within the said bay or headlands, into any ship, vessel, lighter, boat, or bottom, any goods, wares, or merchandise whatsoever, to be transported or carried into any other country, province or place whatsoever, or into any other part of the said province of the Massachusetts Bay, in New England; or to take up, discharge, or lay on land, or cause or procure to be taken up, discharged, or laid on land, within the said town, or in or upon any of the places aforesaid, out of any boat, lighter, ship, vessel, or bottom, any goods, wares, or merchandise whatsoever, to be brought from any other country, province, or place, or any other part of the said province of the Massachusetts Bay in New England, upon pain of the forfeiture of the said goods, wares, and merchandise, and of the said boat, lighter, ship, or vessel or other bottom into which the same shall be taken, and of the guns, ammunition, tackle, furniture, and stores, in or belonging to the same: And if any such goods, wares, or merchandise, shall, within the said town, or in any the places aforesaid, be laden or taken in from the shore into any barge, hoy, lighter, wherry, or boat, to be carried on board any ship or vessel coming in and arriving from any other country or province, or other part of the said province of the Massachusetts Bay in New England, such barge, hoy, lighter, wherry, or boat, shall be forfeited and lost.

II. And be it further enacted by the authority aforesaid, That if any wharfinger, or keeper of any wharf, crane, or quay, of their servants, or any of them, shall take up or land, or knowingly suffer to be taken up or landed, or shall ship off, or suffer to be waterborne, at or from any of their said wharfs, cranes, or quays, any such goods, wares, or merchandise; in every such case, all and every such wharfinger, and keeper of such wharf, crane, or quay, and every person whatever who shall be assisting, or otherwise concerned in the shipping or in the loading or putting on board any boat, or other vessel for that purpose, or in the unshipping such goods, wares, and merchandise, or to whose hands the same shall knowingly come after the loading, shipping, or unshipping thereof, shall forfeit and lose treble the value thereof, to be computed at the highest price which such sort of goods, wares, and merchandise, shall bear at the place where such offence shall be committed, together with the vessels and boats, and all the horses, cattle, and carriages, whatsoever made use of in the shipping, unshipping, landing, removing, carriage, or conveyance of any of the aforesaid goods, wares, and merchandise.

III. And be it further enacted by the authority aforesaid, That if any ship or vessel shall be moored or lie at anchor, or be seen hovering within the said bay, described and bounded as aforesaid, or within one league from the said bay so described, or the said headlands, or any of the islands lying between or within the same, it shall and may be lawful for any admiral, chief commander, or commissioned officer, of his Majesty's fleet or ships of war, or for any officer of his Majesty's customs, to compel such ship or vessel to depart to some other port or harbour, or to such station as the said officer shall appoint, and to use such force for that purpose as shall be found necessary: And if such ship or vessel shall not depart accordingly, within six hours after notice for that purpose given by such person as aforesaid, such ship or vessel, together with all the goods laden on board thereon, and all the guns, ammunition, tackle, and furniture, shall be forfeited and lost, whether bulk shall have been broken or not.

IV. Provided always, That nothing in this act contained shall extend, or be construed to extend, to any military or other stores for his Majesty's use, or to the ships or vessels whereon the same shall be laden, which shall be commissioned by, and in the immediate pay of, his Majesty, his heirs or successors; nor to any fuel or victual brought coastwise from any part of the continent of America, for the necessary use and sustenance of the inhabitants of the said town of Boston, provided the vessels wherein the same are to be carried shall be duly furnished with a cocket and let-pass, after having been duly searched by the proper officers of his Majesty's customs at Marblehead, in the port of Salem, in the said province of Massachusetts Bay; and that some officer of his Majesty's customs be also there put on board the said vessel, who is hereby authorized to go on board, and proceed with the said vessel, together with a sufficient number of persons, properly armed, for his defence, to the said town or harbour of Boston; nor to any ships or vessels which may happen to be within the said harbour of Boston on or before the first day of June, one thousand seven hundred and seventy four, and may have either laden or taken on board, or be there with intent to load or take on board, or to land or discharge any goods, wares, and merchandise, provided the said ships and vessels do depart the said harbour within fourteen days after the said first day of June, one thousand seven hundred and seventy-four.

V. And be it further enacted by the authority aforesaid, That all seizures, penalties, and forfeitures, inflicted by this act, shall be made and prosecuted by any admiral, chief commander, or commissioned officer, of his Majesty's fleet, or ships of war, or by the officers of his Majesty's customs, or some of them, or by some other person deputed or authorised, by warrant from the lord high treasurer, or the commissioners of his Majesty's treasury for the time being, and by no other person whatsoever: And if any such officer, or other person authorised as aforesaid, shall, directly or indirectly, take or receive any bribe or reward, to connive at such lading or unlading, or shall make or commence any collusive seizure, information, or agreement for that purpose, or

shall do any other act whatsoever, whereby the goods, wares, or merchandise, prohibited as aforesaid, shall be suffered to pass, either inwards or outwards, or whereby the forfeitures and penalties inflicted by this act may be evaded, every such offender shall forfeit the sum of five hundred pounds for every such offence, and shall become incapable of any office or employment, civil or military; and every person who shall give, offer, or promise, any such bribe or reward, or shall contract, agree, or treat with any person, so authorised as aforesaid, to commit any such offence, shall forfeit the sum of fifty pounds.

VI. And be it further enacted by the authority aforesaid, That the forfeitures and penalties inflicted by this act shall and may be prosecuted, sued for, and recovered, and be divided, paid, and applied, in like manner as other penalties and forfeitures inflicted by any act or acts of parliament, relating to the trade or revenues of the British colonies or plantations in America, are directed to be prosecuted, sued for, or recovered, divided, paid, and applied, by two several acts of parliament, the one passed in the fourth year of his present Majesty (intituled, An act for granting certain duties in the British colonies and plantations in America; for continuing, amending, and making perpetual, an act passed in the sixth year of the reign of his late majesty King George the Second, intituled, An act for the better securing and encouraging the trade of his Majesty's sugar colonies in America: for applying the produce of such duties, and of the duties to arise by virtue of the said act, towards defraying the expences of defending, protecting, and securing, the said colonies and plantations; for explaining an act made in the twenty-fifth year of the reign of King Charles the Second, intituled, An act for the encouragement of the Greenland and Eastland trades, and for the better securing the plantation trade; and for altering and disallowing several drawbacks on exports from this kingdom, and more effectually preventing the clandestine conveyance of goods to and from the said colonies and plantations, and improving and securing the trade between the same and Great Britain;) the other passed in the eighth year of his present Majesty's reign (intituled, An act for the more easy and effectual recovery of the penalties and forfeitures inflicted by the acts of parliament relating to the trade or revenues of the British colonies and plantations in America.)

VII. And be it further enacted by the authority aforesaid, That every charter party bill of loading, and other contract for consigning shipping, or carrying any goods, wares, and merchandize whatsoever, to or from the said town of Boston, or any part of the bay or harbour thereof, described as aforesaid, which have been made or entered into, or which shall be made or entered into, so long as this act shall remain in full force, relating to any ship which shall arrive at the said town or harbour, after the first day of June, one thousand seven hundred and seventy-four, shall be, and the same are hereby declared to be utterly void, to all intents and purposes whatsoever.

VIII. And be it further enacted by the authority aforesaid, That whenever it shall be made to appear to his Majesty, in his privy council, that peace and obedience to the laws shall be so far restored in the said town of Boston, that the trade of Great Britain may safely be carried on there, and his Majesty's customs duly collected, and his Majesty, in his privy council, shall adjudge the same to be true, it shall and may be lawful for his Majesty, by proclamation, or order of council, to assign and appoint the extent, bounds, and limits, of the port or harbour of Boston, and of every creek or haven within the same, or in the islands within the precincts thereof; and also to assign and appoint such and so many open places, quays, and wharfs, within the said harbour, creeks, havens, and islands, for the landing, discharging, lading, and shipping of goods, as his Majesty, his heirs or successors, shall judge necessary and expedient; and also to appoint such and so many officers of the customs therein as his Majesty shall think fit, after which it shall be lawful for any person or persons to lade or put off from, or to discharge and land upon, such wharfs, quays, and places, so appointed within the said harbour, and none other, any goods, wares, and merchandise whatever.

IX. Provided always, That if any goods, wares, or merchandize, shall be laden or put off from, or discharged or landed upon, any other place than the quays, wharfs, or places, so to be appointed, the same, together with the ships, boats, and other vessels employed therein, and the horses, or other cattle and carriages used to convey the same, and the person or persons concerned or assisting therein, or to whose hands the same shall knowingly come, shall suffer all the forfeitures and penalties imposed by this or any other act on the illegal shipping or landing of goods.

X. Provided also, and it is hereby declared and enacted, That nothing herein contained shall extend, or be construed, to enable his Majesty to appoint such port, harbour, creeks, quays, wharfs, places, or officers in the said town of Boston, or in the said bay or islands, until it shall sufficiently appear to his Majesty that full satisfaction hath been made by or on behalf of the inhabitants of the said town of Boston to the united company of merchants of England trading to the East Indies, for the damage sustained by the said company by the destruction of their goods sent to the said town of Boston, on board certain ships or vessels as aforesaid; and until it shall be certified to his Majesty, in council, by the governor, or lieutenant governor, of the said province, that reasonable satisfaction hath been made to the officers of his Majesty's revenue, and others, who suffered by the riots and insurrections above mentioned, in the months of November and December, in the year one thousand seven hundred and seventy-three, and in the month of January, in the year one thousand seven hundred and seventy-four.

XI. And be it further enacted by the authority aforesaid, That if any action or suit shall be commenced, either in Great Britain or America, against any person or persons, for any thing done in pursuance of this act of parliament, the defendant or defendants, in such action or suit, may plead the general issue, and give the said act, and the special matter, in evidence, at any trial to be had thereupon, and that the same was done in pursuance and by the authority of this act: and if it shall appear so to have been done, the jury shall find for the defendant or defendants; and if the plaintiff shall be nonsuited, or discontinue his action, after the defendant or defendants shall have appeared: or if judgment shall be given upon any verdict or demurrer, against the plaintiff, the defendant or defendants shall recover treble costs, and have the like remedy for the same, as defendants have in other cases by law.

Slave Petition to the Governor, Council, and House of Representatives of the Province of Massachusetts (1774)

Influenced by the rhetoric and actions of American patriots beginning their struggle for freedom from the British Crown, a number of slaves—particularly those in the urban areas of the North—began to petition for their freedom. This 1774 petition, submitted by Massachusetts slaves to officials of the colony, reflects some of the language and sentiments of other patriots at the time.

25 May 1774

The Petition of a Grate Number of Blackes of this Province who by divine permission are held in a state of Slavery within the bowels of a free and christian Country

Humbly Shewing.... That your Petitioners apprehend we have in common with all other men a naturall right to our freedoms without Being depriv'd of them by our fellow men as we are a freeborn Peple and have never forfeited this Blessing by any compact or agreement whatever. But we were unjustly dragged by the cruel hand of power from our dearest friends and sum of us stolen from the bosoms of our tender Parents and from a Populous Pleasant and plentiful country and Brought hither to be made slaves for Life in a Christian land. Thus are we deprived of every thing that hath a tendency to make life even tolerable, the endearing ties of husband and wife we are strangers to for we are no longer man and wife then our masters or mistresses think proper married or unmarried. Our children are also taken from us by force and sent many miles from us where we seldom or ever see them again there to be made slaves of for Life which sometimes is very short by Reason of Being dragged from their mothers Breasts Thus our Lives are embittered to us on these accounts By our deplorable situation we are rendered incapable of shewing our obedience to Almighty God how can a slave perform the duties of a husband to a wife or parent to his child How can a husband leave master and work and cleave to his wife How can the wife submit themselves to their husbands in all things. How can the child obey their parents in all things. There is a great number of us since ... members of the Church of Christ how can the master and the slave be said to fulfil that command Live in love let Brotherly Love continue and abound Bear ye one anothers Burdenes How can the master be said to Bear my Burden when he Beares me down with the Chains of slavery and opposes against my will and how can we fulfill our part of duty to him whilst in this condition and as we cannot serve our God as we ought whilst in this situation Neither can we reap an equal benefit from the laws of the Land which doth not justify but condemns Slavery or if there had been any Law to hold us in Bondage we are Humbly of the Opinion there never was any to enslave our children for life when Born in a free Country. We therefore Begg your Excellency and Honours will give this its due weight and consideration and that you will accordingly cause an act of the legislative to be passed that we may obtain our Natural right our freedoms and our children be set at liberty at the year of Twenty one for whomever seeks more to oppress your Petitioners is in Duty ever to Pray.

A Case for Non-Interference by Parliament (1775)

John Adams wrote a series of letters for the *Boston Gazette*, under the pseudonym Novanglus, in which he demonstrated a penetrating understanding of the nature of government. Adams argued that New England derived its rights from the charters granted by the British Crown and that Parliament did not have authority to control America. He equated Britain and America as separate states, maintaining that, even though both shared allegiance to the Crown and America had given its assent to Parliament in matters of foreign trade, it was local government that had authority in the colonies.

February 6, 1775

I agree, that "two supreme and independent authorities cannot exist in the same state," any more than two supreme beings in one universe; And, therefore, I contend, that our provincial legislatures are the only supreme authorities in our colonies. Parliament, notwithstanding this, may be allowed an authority supreme and sovereign over the ocean, which may be limited by the banks of the ocean, or the bounds of our charters; our charters give us no authority over the high seas. Parliament has our consent to assume a jurisdiction over them. And here is a line fairly drawn between the rights of Britain and the rights of the colonies, namely, the banks of the ocean, or low-water mark; the line of division between common law, and civil or maritime law....

"If then, we are a part of the British empire, we must be subject to the supreme power of the state, which is vested in the estates in parliament."

Here, again, we are to be conjured out of our senses by the magic in the words "British empire," and "supreme power of the state." But, however it may sound, I say we are not a part of the British empire; because the British government is not an empire. The governments of France, Spain, &c. are not empires, but monarchies, supposed to be governed by fixed fundamental laws, though not really. The British government is still less entitled to the style of an empire. It is a limited monarchy. If Aristotle, Livy, and Harrington knew what a republic was, the British constitution is much more like a republic than an empire. They define a republic to be a government of laws, and not of men. If this definition is just, the British constitution is nothing more nor less than a republic, in which the king is first magistrate. This office being hereditary, and being possessed of such ample and splendid prerogatives, is no objection to the government's being a republic, as long as it is bound by fixed laws, which the people have a voice in making, and a right to defend. An empire is a despotism, and an emperor a despot, bound by no law or limitation but his own will; it is a stretch of tyranny beyond absolute monarchy. For, although the will of an absolute monarch is law, yet his edicts must be registered by parliaments. Even this formality is not necessary in an empire

"If the colonies are not subject to the authority of parliament, Great Britain and the colonies must be distinct states, as completely so as England and Scotland were before the union, or as Great Britain and Hanover are now." There is no need of being startled at this consequence. It is very harmless. There is no absurdity at all in it. Distinct states may be united under one king. And those states may be further cemented and united together by a treaty of commerce. This is the case. We have, by our own express consent, contracted to observe the Navigation Act, and by our implied consent, by long usage and uninterrupted acquiescence, have submitted to the other acts of trade, however grievous some of them may be. This may be compared to a

treaty of commerce, by which those distinct states are cemented together, in perpetual league and amity....

The only proposition in all this writer's long string of pretended absurdities, which he says follows from the position that we are distinct states, is this: That, "as the king must govern each state by its parliament, those several parliaments would pursue the particular interest of its own state; and however well disposed the king might be to pursue a line of interest that was common to all, the checks and control that he would meet with would render it impossible." Every argument ought to be allowed its full weight; and therefore candor obliges me to acknowledge, that here lies all the difficulty that there is in this whole controversy. There has been, from first to last, on both sides of the Atlantic, an idea, an apprehension that it was necessary there should be some superintending power, to draw together all the wills, and unite all the strength of the subjects in all the dominions, in case of war, and in the case of trade. The necessity of this, in case of trade, has been so apparent, that, as has often been said, we have consented that parliament should exercise such a power. In case of war, it has by some been thought necessary. But, in fact and experience, it has not been found so.... The inconveniences of this were small, in comparison of the absolute ruin to the liberties of all which must follow the submission to parliament, in all cases, which would be giving up all the popular limitations upon the government.

But, admitting the proposition in its full force, that it is absolutely necessary there should be a supreme power, coextensive with all the dominions, will it follow that parliament, as now constituted, has a right to assume this supreme jurisdiction? By no means.

A union of the colonies might be projected, and an American legislature; for, if America has 3,000,000 people, and the whole dominions 12,000,000, she ought to send a quarter part of all the members to the house of commons; and instead of holding parliaments always at Westminster, the haughty members for Great Britain must humble themselves, one session in four, to cross the Atlantic, and hold the parliament in America.

There is no avoiding all inconveniences in human affairs. The greatest possible, or conceivable, would arise from ceding to parliament power over us without a representation in it.... The least of all would arise from going on as we began, and fared well for 150 years, by letting parliament regulate trade, and our own assemblies all other matters.

But perhaps it will be said, that we are to enjoy the British constitution in our supreme legislature, the parliament, not in our provincial legislatures. To this I answer, if parliament is to be our supreme legislature, we shall be under a complete oligarchy or aristocracy, not the British constitution, which this writer himself defines a mixture of monarchy, aristocracy, and democracy. For king, lords, and commons, will constitute one great oligarchy, as they will stand related to America, as much as the deceivers did in Rome; with this difference for the worse, that our rulers are to be three thousand miles off.... If our provincial constitutions are in any respect imperfect, and want alteration, they have capacity enough to discern it, and power enough to effect it, without interposition of parliament.... America will never allow that parliament has any authority to alter their constitution at all. She is wholly penetrated with a sense of the necessity of resisting it at all hazards.... The question we insist on most is, not whether the alteration is for the better or not, but whether parliament has any right to make any alteration at all. And it is the universal sense of America, that it has none.

That a representation in parliament is impracticable, we all agree; but the consequence is, that we must have a representation in our supreme legislatures here. This was the consequence that was drawn by kings, ministers, our ancestors, and the whole nation, more than a century ago, when the colonies were first settled, and continued to be the general sense until the last peace; and it must be the general sense again soon, or Great Britain will lose her colonies.

"It is our highest interest to continue a part of the British empire; and equally our duty to remain subject to the authority of parliament," says Massachusettensis.

We are a part of the British dominions, that is, of the King of Great Britain, and it is our interest and duty to continue so. It is equally our interest and duty to continue subject to the authority of parliament, in the regulation of our trade, as long as she shall leave us to govern our internal policy, and to give and grant our own money, and no longer.

Petition of London Merchants for Reconciliation with the Colonies (1775)

Amid a devastating decline in trade with the colonies, London merchants pleaded with Parliament for a tempering of the onerous commercial policies that resulted in an American embargo of British goods. While numerous such petitions were delivered to Parliament, this one is a particularly detailed account of the materials traded, and it gives a clear picture of the pressing need to restore standard trading practices.

Mr. Alderman Hayley said he had a petition from the merchants of the city of London concerned in the commerce to North America, to that honourable House, and desired leave to present the same, which being given, it was brought up and read, setting forth:

That the petitioners are all essentially interested in the trade to North America, either as exporters and importers, or as venders of British and foreign goods for exportation to that country; and that the petitioners have exported, or sold for exportation, to the British colonies in North America, very large quantities of the manufacture of Great Britain and Ireland, and in particular the staple articles of woollen, iron, and linen, also those of cotton, silk, leather, pewter, tin, copper, and brass, with almost every British manufacture; also large quantities of foreign linens and other articles imported into these kingdoms, from Flanders, Holland, Germany, the East Countries, Portugal, Spain, and Italy, which are generally received from those countries in return for British manufactures; and that the petitioners have likewise exported, or sold for exportation, great quantities of the various species of goods imported into this kingdom from the East-Indies, part of which receive additional manufacture in Great Britain; and that the petitioners receive returns from North

America to this kingdom directly, viz. pig and bar iron, timber, staves, naval stores, tobacco, rice, indigo, deer, and other skins, beaver and furs, train oil, whalebone, bees wax, pot and pearl ashes, drugs and dying woods, with some bullion, and also wheat flour, Indian corn and salted provisions, when, on account of scarcity in Great Britain, those articles are permitted to be imported; and that the petitioners receive returns circuitously from Ireland (for flax seed, &c. exported from North America) by bills of exchange on the merchants of this city trading to Ireland, for the proceeds of linens, &c. imported into these kingdoms from the West Indies; in return for provisions, lumber and cattle, exported from North America, for the use and support of the West India islands, by bills of exchange on the West India merchants, for the proceeds of sugar, molasses, rum, cotton, coffee, or other produce, imported from those islands into these kingdoms; from Italy, Spain, Portugal, France, Flanders, Germany, Holland, and the East Countries, by bills of exchange or bullion in return for wheat flour, rice, Indian corn, fish, and lumber, exported from the British colonies in North America, for the use of those countries; and that the petitioners have great reason to believe, from the best informations they can obtain, that on the balance of this extensive commerce, there is now due from the colonies in North America, to the said city only, 02,000,000 sterling, and upwards; and that, by the direct commerce with the colonies, and the circuitous trade thereon depending, some thousands of ships and vessels are employed, and many thousands of seamen are bred and maintained, thereby increasing the naval strength and power of Great Britain; and that, in the year 1765, there was a great stagnation of the commerce between Great Britain and her colonies, in consequence of an Act for granting and applying certain stamp duties, and other duties, in the British colonies and plantations in America, by which the merchants trading to North America, and the artificers employed in the various manufactures consumed in those countries, were subjected to many hardships; and that, in the following year, the said Act was repealed, under an express declaration of the legislature, that the continuance of the said Act would be attended with many inconveniences, and might be productive of consequences greatly detrimental to the commercial interests of these kingdoms; upon which repeal, the trade to the British colonies immediately resumed its former flourishing state; and that in the year 1767 an Act passed for granting certain duties in the British colonies and plantations in America, which imposed certain duties, to be paid in America, on tea, glass, red and white lead, painters' colours, paper, paste-board, mill-board, and scale-board, when the commerce with the colonies was again interrupted; and that in the year 1770, such parts of the said Act as imposed duties on glass, red and white lead, painters' colours, paper, paste-board, mill-board, and scale-board, were repealed, when the trade to America soon revived, except in the article of tea, on which a duty was continued, to be demanded on its importation into America, whereby that branch of our commerce was nearly lost; and that, in the year 1773, an Act passed, to allow a drawback of the duties of customs on the exportation of tea to his Majesty's colonies or plantations in America, and to empower the commissioners of the Treasury to grant licenses to the East India Company, to export tea, duty free; and by the operation of those and other laws, the minds of his Majesty's subjects in the British colonies have been greatly disquieted, a total stop is now put to the export trade with the greatest and most important part of North America, the public revenue is threatened with a large and fatal diminution, the petitioners with grievous distress, and thousands of industrious artificers and manufacturers with utter ruin; under these alarming circumstances, the petitioners receive no small comfort, from a persuasion that the representatives of the people, newly delegated to the most important of all trusts, will take the whole of these weighty matters into their most serious consideration; and therefore praying the House, that they will enter into a full and immediate examination of that system of commercial policy, which was formerly adopted, and uniformly maintained, to the happiness and advantage of both countries, and will apply such healing remedies as can alone restore and establish the commerce between Great Britain and her colonies on a permanent foundation; and that the petitioners may be heard by themselves, or agents, in support of the said petition.

Tobacco Growing (1775)

This early account details the cultivation of tobacco in the colonies. Though grown in all of the colonies, tobacco was primarily a cash crop exported from Maryland, Virginia, and North Carolina.

This plant [tobacco] is cultivated in all parts of North America, from Quebec to Carolina, and even the West Indies; but, except in Maryland, Virginia, and North Carolina, they plant no more than for private use, making it an object of exportation only in these provinces, where it is of such immense consequence....

One of the greatest advantages attending the culture of tobacco, is the quick, easy, and certain method of sale. This was effected by the inspection law, which took place in Virginia in the year 1730, but not in Maryland till 1748. The planter, by virtue of this, may go to any place and sell his tobacco, without carrying a sample of it along with him, and the merchant may buy it, though lying a hundred miles, or at any distance from his store, and yet be morally sure both with respect to quantity and quality. For this purpose, upon all the rivers and bays of both provinces, at a distance of about twelve or fourteen miles from each other, are erected warehouses, to which all the tobacco in the country must be brought, and there lodged, before the planters can offer it for sale; and inspectors are appointed to examine all the tobacco brought in, receive such as is good and merchantable, condemn and burn what appears damnified or insufficient. The greatest part of the tobacco is prized, or put up into hogsheads by the planters themselves, before it is carried to the warehouses. Each hogshead, by an act of assembly, must be 950 lb. neat, or upwards; some of them weigh 14 cwt. and even 18 cwt. and the heavier they are the merchants like them the better; because four hogsheads, whatsoever their weight be, are esteemed a tun, and pay the same freight. The inspectors give notes of receipt for the tobacco, and the merchants take them in payment for their goods, passing current indeed over the whole colonies; a most admirable invention, which operates so greatly, that in Virginia they have no paper currency.

The merchants generally purchase the tobacco in the country, by sending persons to open stores for them; that is, warehouses in which they lay in a great assortment of British commodities and manufactures, to these, as to shops, the planters resort, and supply themselves with what they want, paying, in inspection receipts, or taking on credit according to what will be given them; and as they are in general a very luxurious set of people, they buy too much upon credit; the consequence of which is, their getting in debt to the London merchants, who take mortgages on their plantations, ruinous enough, with the usury of eight per cent. But this is apparently the effect of their imprudence in living upon trust....

There is no plant in the world that requires richer land, or more manure than tobacco; it will grow on poorer soils, but not to yield crops that are sufficiently profitable to pay the expences of negroes, &c. The land they found to answer best is fresh woodlands, where many ages have formed a stratum of rich black mould. Such land will, after clearing, bear tobacco many years, without any change, prove more profitable to the planter than the power of dung can do on worse lands: this makes the tobacco planters more solicitous for new land than any other people in America, they wanting it much more. Many of them have very handsome houses, gardens, and improvements about them, which fixes them to one spot; but others, when they have exhausted their grounds, will sell them to new settlers for corn-fields, and move backwards with their negroes, cattle, and tools, to take up fresh land for tobacco; this is common, and will continue so as long as good land is to be had upon navigable rivers: this is the system of business which made some, so long ago as 1750, move over the Allegany mountains, and settle not far from the Ohio, where their tobacco was to be carried by land some distance, which is a heavy burthen on so bulky a commodity, but answered by the superior crops they gained: the French encroachments drove these people all back again; but upon the peace, many more went, and the number increasing, became the occasion of the new colony which has been settled in that country.

Common Sense (1776)

Thomas Paine's pamphlet *Common Sense*, dated January 10, 1776, made a compelling case that the problems with England went well beyond taxation. Paine's inspiring essay rallied American resolve to fight for independence from the mother country. Over 100,000 copies of this seminal work were sold within three months of its printing.

Volumes have been written on the subject of the struggle between England and America. Men of all ranks have embarked in the controversy, from different motives, and with various designs: but all have been ineffectual....

I have heard it asserted by some, that as America hath flourished under her former connection with Great Britain, the same connection is necessary towards her future happiness, and will always have the same effect. Nothing can be more fallacious than this kind of argument. We may as well assert that because a child has thriven upon milk, that it is never to have meat, or that the first twenty years of our lives is to become a precedent for the next twenty. But even this is admitting more than is true; for I answer roundly, that America would have flourished as much, and probably much more, had no European power taken any notice of her. The commerce by which she hath enriched herself are the necessities of life, and will always have a market while eating is the custom of Europe.

But she has protected us, say some. That she hath engrossed us is true, and defended the continent at our expense as well as her own is admitted; and she would have defended Turkey from the same motive ... for the sake of trade and dominion.

Alas! we have long been led away by ancient prejudices, and made large sacrifices to superstition. We have boasted the protection of Great Britain without considering that her motive was interest, not attachment; and that she did not protect us from our enemies on our account, but from her enemies on her own account, from those who had no quarrel with us on any other account, but who will always be our enemies on the same account. Let Britain waive her pretensions to the continent, or the continent throw off her dependence, and we should be at peace with France and Spain were they at war with Britain....

But Britain is the parent country, say some. Then the more shame upon her conduct. Even brutes do not devour their young, nor savages make war upon their families; wherefore, the assertion, if true, turns to her reproach; but it happens not to be true, or only partly so, and the phrase parent or mother country hath been jesuitically adopted by the king and his parasites, with a low, papistical design of gaining an unfair bias on the credulous weakness of our minds. Europe, not England, is the parent country of America. This new world hath been the asylum for the persecuted lovers of civil and religious liberty from every part of Europe. Hither have they fled, not from the tender embraces of a mother, but from the cruelty of a monster; and it is so far true of England, that the same tyranny which drove the first emigrants from home, pursues their descendants still....

I challenge the warmest advocate for reconciliation to show a single advantage that this continent can reap, by being connected to Great Britain.... Our corn will fetch its price in any market in Europe, and our imported goods must be paid for, buy them where we will.

But the injuries and disadvantages we sustain by that connection are without number; and our duty to mankind at large, as well as to ourselves, instructs us to renounce the alliance: because any submission to, or dependence on, Great Britain tends directly to involve this continent in European wars and quarrels, and sets us at variance with nations who would otherwise seek our friendship, and against whom we have neither anger nor complaint. As Europe is our market for trade, we ought to form no partial connection with any part of it. 'Tis the true interest of America to steer clear of European contentions, which she never can do while by her dependence on Britain she is made the makeweight in the scale of British politics.

Europe is too thickly planted with kingdoms to be long at peace, and whenever a war breaks out between England and a foreign power, the trade of America goes to ruin, because of her connection with Britain. The next war may not turn out like the last, and should it not, the advocates for reconciliation now will be wishing for separation then, because neutrality in that case would be a safer convoy than a man of war. Everything that is right or natural pleads for separation. The blood of the slain, the weeping voice of nature cries, "TIS TIME TO PART." Even the distance at which the Almighty hath placed England and America is a strong and natural proof that the authority of one over the other was never the design of heaven....

It is the good fortune of many to live distant from the scene of present sorrows; the evil is not sufficiently brought to their doors to make them feel the precariousness with which all American property is possessed. But let our imaginations transport us for a few moments to Boston; that seat of

wretchedness will teach us wisdom, and instruct us to forever renounce a power in whom we can have no trust. The inhabitants of that unfortunate city, who but a few months ago were in ease and affluence, have now no other alternative than to stay and starve, or turn out to beg. Endangered by the fire of their friends if they continue within the city, and plundered by the soldiery if they leave it, in their present situation they are prisoners without the hope of redemption....

But if you say, you can still pass the violations over, then I ask, Hath your house been burnt? Hath your property been destroyed before your face? Are your wife and children destitute of a bed to lie on, or bread to live on? Hath you lost a parent or child by their hands, and yourself the ruined and wretched survivor? If you have not, then you are not a judge of those who have. But if you have, and can still shake hands with the murderers, then you are unworthy of the name of husband, father, friend, or lover; and whatever might be your rank or title in life, you have the heart of a coward, and the spirit of a sycophant....

Every quiet method for peace hath been ineffectual. Our prayers have been rejected with disdain; and have tended to convince us that nothing flatters vanity or confirms obstinacy in kings more than repeated petitioning—and nothing hath contributed more than that very measure to make the kings of Europe absolute.... Wherefore, since nothing but blows will do, for God's sake let us come to a final separation, and not leave the next generation to be cutting throats under the violated unmeaning names of parent and child....

As to government matters, it is not in the power of Britain to do this continent justice ... for if they cannot conquer us, they cannot govern us. To be always running three or four thousand miles with a tale or petition, waiting four or five months for an answer, which, when obtained, requires five or six more to explain it in, will in a few years be looked upon as folly and childishness. There was a time when it was proper, and there is a proper time for it to cease.

Small islands not capable of protecting themselves are the proper objects for kingdoms to take under their care; but there is something very absurd in supposing a continent to be perpetually governed by an island. In no instance hath nature made the satellite larger than its primary planet; and as England and America, with respect to each other, reverse the common order of nature, it is evident that they belong to different systems. England to Europe—America to itself....

[The king] hath shown himself such an inveterate enemy to liberty, and discovered such a thirst for arbitrary power, is he, or is he not, a proper person to say to these colonies, "You shall make no laws but what I please!" And is there any inhabitant in America so ignorant as not to know, that according to what is called the present constitution, this continent can make no laws but what the King gives leave to; and is there any man so unwise as not to see, that (considering what has happened) he will suffer no law to be made but such as suits his purpose? ... [C]an there be any doubt but the whole power of the Crown will be exerted to keep this continent as low and as humble as possible? Instead of going forward we will go backward.... We are already greater than the King wishes us to be, and will he not hereafter endeavor to make us less? To bring the matter to one point, is the power jealous of our prosperity, a proper power to govern us? Whosoever says No to this question is an independent, for independency means no more than this, whether we shall make our own laws, or whether the king, the greatest enemy which this continent hath, or can have, shall tell us, "There shall be no laws but such as I like...."

But where, say some, is the king of America? I'll tell you, friend, he reigns above, and doth not make havoc of mankind like the Royal Brute of Great Britain.... [L]et it be brought forth placed on the divine law, the Word of God; let a crown be placed thereon, by which the world may know, that so far as we approve of monarchy, that in America THE LAW IS KING. For in absolute governments the king is law, so in free countries the law ought to BE king, and there ought to be no other. But lest any ill use should afterwards arise, let the crown at the conclusion of the ceremony be demolished....

A government of our own is our natural right; and when a man seriously reflects on the precariousness of human affairs, he will become convinced, that it is infinitely wiser and safer to form a constitution of our own in a cool deliberate manner, while we have it in our power, than to trust such an interesting event to time and chance....

Ye that tell us of harmony and reconciliation, can ye restore to us the time that is passed? Can ye give to prostitution its former innocence? Neither can ye reconcile Britain and America. The last cord is now broken.... There are injuries which nature cannot forgive; she would cease to be nature if she did. As well can the lover forgive the ravisher of his mistress, as the continent forgive the murders of Britain. The Almighty hath implanted in us these inextinguishable feelings for good and wide purposes. They are the guardians of his image in our hearts. They distinguish us from the herd of common animals. The social compact would dissolve, and justice be extirpated from the earth, or have only a casual existence, were we callous to the touches of affection. The robber and the murderer would often escape unpunished, did not the injuries which our tempers sustain, provoke us into justice.

O ye that love mankind! Ye that dare oppose not only the tyranny but the tyrant, stand forth! Every spot of the old world is overrun with oppression. Freedom hath been hunted round the globe. Asia and Africa have long expelled her. Europe regards her like a stranger, and England hath given her warning to depart. O receive the fugitive, and prepare in time an asylum for all mankind....

Letters between Abigail Adams and John Adams (1776)

Abigail and John Adams corresponded regularly when he was away on official duties. She discussed the politics of the time, and he valued her insights.

While independence was being debated in the Continental Congress, Abigail Adams questioned her husband on the colonies' readiness for defense. In her letter of March 31, she also pointed out that women might rebel if they were not accorded representation.

In his April 14 response to his wife, John Adams detailed what he saw as the defense strengths, especially of Virginia and North Carolina, and he spoke of the aristocratic tendencies of a number of the representatives. Adams was obviously amused by his wife's "saucy" request that he "remember the ladies," and his teasing reply suggests that men "are the subjects" and "have only the Name of Masters."

Abigail Adams to John Adams

March, 31, 1776

I wish you would ever write me a Letter half as long as I write you; and tell me if you may where your Fleet are gone? What sort of Defence Virginia can make against our common Enemy? Whether it is so situated as to make an able Defence? Are not the Gentry Lords and the common people vassals, are they not like the uncivilized Natives Brittain represents us to be? I hope their Riffel Men who have shewen themselves very savage and even Blood thirsty; are not a specimen of the Generality of the people.

I am willing to allow the Colony great merit for having produced a Washington but they have been shamefully duped by a Dunmore.

I have sometimes been ready to think that the passion for Liberty cannot be Equally Strong in the Breasts of those who have been accustomed to deprive their fellow Creatures of theirs. Of this I am certain that it is not founded upon that generous and christian principal of doing to others as we would that others should do unto us....

I long to hear that you have declared an independancy—and by the way in the new Code of Laws which I suppose it will be necessary for you to make I desire you would Remember the Ladies, and be more generous and favourable to them than your ancestors. Do not put such unlimited power into the hands of the Husbands. Remember all Men would be tyrants if they could. If particular care and attention is not paid to the Ladies we are determined to foment a Rebellion, and will not hold ourselves bound by any Laws in which we have no voice, or Representation.

That your Sex are Naturally Tyrannical is a Truth so thoroughly established as to admit of no dispute, but such of you as wish to be happy willingly give up the harsh title of Master for the more tender and endearing one of Friend. Why then, not put it out of the power of the vicious and the Lawless to use us with cruelty and indignity with impunity. Men of Sense in all Ages abhor those customs which treat us only as the vassals of your Sex. Regard us then as Beings placed by providence under your protection and in imitation of the Supream Being make use of that power only for our happiness.

Source: Abigail Smith Adams, *The Book of Abigail and John: Selected Letters of the Adams Family, 1762–1784*, edited by L. H. Butterfield, et al. (Cambridge, MA: Harvard University Press, 1975).

John Adams to Abigail Adams

April 14, 1776

You justly complain of my short Letters, but the critical State of Things and the Multiplicity of Avocations must plead my Excuse. You ask where the Fleet is. The inclosed Papers will inform you. You ask what Sort of Defence Virginia can make. I believe they will make an able Defence. Their Militia and minute Men have been some time employed in training them selves, and they have Nine Battallions of regulars as they call them, maintained among them, under good Officers, at the Continental Expence. They have set up a Number of Manufactories of Fire Arms, which are busily employed. They are tolerably supplied with Powder, and are successfull and assiduous, in making Salt Petre. Their neighbouring Sister or rather Daughter Colony of North Carolina, which is a warlike Colony, and has several Battallions at the Continental Expence, as well as a pretty good Militia, are ready to assist them, and they are in very good Spirits, and seem determined to make a brave Resistance.—The Gentry are very rich, and the common People very poor. This Inequality of Property, gives an Aristocratical Turn to all their Proceedings, and occasions a strong Aversion in their Patricians, to Common Sense. But the Spirit of these Barons, is coming down, and it must submit.

It is very true, as you observe they have been duped by Dunmore. But this is a Common Case. All the Colonies are duped, more or less, at one Time and another. A more egregious Bubble was never blown up, than the Story of Commissioners coming to treat with the Congress. Yet it has gained Credit like a Charm, not only without but against the clearest Evidence. I never shall forget the Delusion, which seized our best and most sagacious Friends the dear Inhabitants of Boston, the Winter before last. Credulity and the Want of Foresight, are Imperfections in the human Character, that no Politician can sufficiently guard against.

You have given me some Pleasure, by your Account of a certain House in Queen Street. I had burned it, long ago, in Imagination. It rises now to my View like a Phoenix.—What shall I say of the Solicitor General? I pity his pretty Children, I pity his Father, and his sisters. I wish I could be clear that it is no moral Evil to pity him and his Lady. Upon Repentance they will certainly have a large Share in the Compassions of many. But [illegible] let Us take Warning and give it to our Children. Whenever Vanity, and Gaiety, a Love of Pomp and Dress, Furniture, Equipage, Buildings, great Company, expensive Diversions, and elegant Entertainments get the better of the Principles and Judgments of Men or Women there is no knowing where they will stop, nor into what Evils, natural, moral, or political, they will lead us.

Your Description of your own Gaiety de Coeur, charms me. Thanks be to God you have just Cause to rejoice—and may the bright Prospect be obscured by no Cloud.

As to Declarations of Independency, be patient. Read our Privateering Laws, and our Commercial Laws. What signifies a Word.

As to your extraordinary Code of Laws, I cannot but laugh. We have been told that our Struggle has loosened the bands of Government every where. That Children and Apprentices were disobedient—that schools and Colledges were grown turbulent—that Indians slighted their Guardians and Negroes grew insolent to their Masters.

But your Letter was the first Intimation that another Tribe more numerous and powerfull than all the rest were grown discontented.—This is rather too coarse a Compliment but you are so saucy, I wont blot it out.

Depend upon it, We know better than to repeal our Masculine systems. Altho they are in full Force, you know they are little more than Theory. We dare not exert our Power in its full Latitude. We are obliged to go fair, and softly, and in Practice you know We are the subjects. We have only the Name of Masters, and rather than give up this, which would compleatly subject Us to the Despotism of the Peticoat, I hope General Washington, and all our brave Heroes would fight. I am sure every good Politician would plot, as long as he would against Despotism, Empire, Monarchy, Aristocracy, Oligarchy, or Ochlocracy.—A fine Story indeed. I begin to think the Ministry as deep as they are wicked. After stirring up Tories, Landjobbers, Trimmers, Bigots, Canadians, Indians, Negroes, Hanoverians, Hessians, Russians, Irish Roman Catholicicks, Scotch Renegadoes, at last they have stimulated the to demand new Priviledges and threaten to rebell.

The Declaration of Independence (1776)

This document called for the independence of the thirteen American colonies from Britain. Unanimously adopted in Philadelphia by the Second Continental Congress on July 4, 1776, the text was written primarily by Thomas Jefferson, who drew, in part, from John Locke's theories of natural rights and government deriving its power from the governed.

Originally signed only by John Hancock, the presiding officer of the Continental Congress at the time of its passage, the Declaration of Independence was copied and sent to the colonial legislatures on January 18, 1777. Meanwhile, the other members of the Congress signed this document on August 2, 1776.

Action of Second Continental Congress, July 4, 1776The unanimous Declaration of the thirteen United States of America

WHEN in the Course of human Events, it becomes necessary for one People to dissolve the Political Bands which have connected them with another, and to assume among the Powers of the Earth, the separate and equal Station to which the Laws of Nature and of Nature's God entitle them, a decent Respect to the Opinions of Mankind requires that they should declare the causes which impel them to the Separation.

WE hold these Truths to be self-evident, that all Men are created equal, that they are endowed by their Creator with certain unalienable Rights, that among these are Life, Liberty and the Pursuit of Happiness—That to secure these Rights, Governments are instituted among Men, deriving their just Powers from the Consent of the Governed, that whenever any Form of Government becomes destructive of these Ends, it is the Right of the People to alter or to abolish it, and to institute new Government, laying its Foundation on such Principles, and organizing its Powers in such Form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient Causes; and accordingly all Experience hath shewn, that Mankind are more disposed to suffer, while Evils are sufferable, than to right themselves by abolishing the Forms to which they are accustomed. But when a long Train of Abuses and Usurpations, pursuing invariably the same Object, evinces a Design to reduce them under absolute Despotism, it is their Right, it is their Duty, to throw off such Government, and to provide new Guards for their future Security. Such has been the patient Sufferance of these Colonies; and such is now the Necessity which constrains them to alter their former Systems of Government. The History of the present King of Great-Britain is a History of repeated Injuries and Usurpations, all having in direct Object the Establishment of an absolute Tyranny over these States. To prove this, let Facts be submitted to a candid World.

HE has refused his Assent to Laws, the most wholesome and necessary for the public Good.

HE has forbidden his Governors to pass Laws of immediate and pressing Importance, unless suspended in their Operation till his Assent should be obtained; and when so suspended, he has utterly neglected to attend to them.

HE has refused to pass other Laws for the Accommodation of large Districts of People, unless those People would relinquish the Right of Representation in the Legislature, a Right inestimable to them, and formidable to Tyrants only.

HE has called together Legislative Bodies at Places unusual, uncomfortable, and distant from the Depository of their public Records, for the sole Purpose of fatiguing them into Compliance with his Measures.

HE has dissolved Representative Houses repeatedly, for opposing with manly Firmness his Invasions on the Rights of the People.

HE has refused for a long Time, after such Dissolutions, to cause others to be elected; whereby the Legislative Powers, incapable of the Annihilation, have returned to the People at large for their exercise; the State remaining in the mean time exposed to all the Dangers of Invasion from without, and the Convulsions within.

HE has endeavoured to prevent the Population of these States; for that Purpose obstructing the Laws for Naturalization of Foreigners; refusing to pass others to encourage their Migrations hither, and raising the Conditions of new Appropriations of Lands.

HE has obstructed the Administration of Justice, by refusing his Assent to Laws for establishing Judiciary Powers.

HE has made Judges dependent on his Will alone, for the Tenure of their Offices, and the Amount and Payment of their Salaries.

HE has erected a Multitude of new Offices, and sent hither Swarms of Officers to harrass our People, and eat out their Substance.

HE has kept among us, in Times of Peace, Standing Armies, without the consent of our Legislatures.

HE has affected to render the Military independent of and superior to the Civil Power.

HE has combined with others to subject us to a Jurisdiction foreign to our Constitution, and unacknowledged by our Laws; giving his Assent to their Acts of pretended Legislation:

FOR quartering large Bodies of Armed Troops among us;

FOR protecting them, by a mock Trial, from Punishment for any Murders which they should commit on the Inhabitants of these States:

FOR cutting off our Trade with all Parts of the World:

FOR imposing Taxes on us without our Consent:

FOR depriving us, in many Cases, of the Benefits of Trial by Jury:

FOR transporting us beyond Seas to be tried for pretended Offences:

FOR abolishing the free System of English Laws in a neighbouring Province, establishing therein an arbitrary Government, and enlarging its Boundaries, so as to render it at once an Example and fit Instrument for introducing the same absolute Rules into these Colonies:

FOR taking away our Charters, abolishing our most valuable Laws, and altering fundamentally the Forms of our Governments:

FOR suspending our own Legislatures, and declaring themselves invested with Power to legislate for us in all Cases whatsoever.

HE has abdicated Government here, by declaring us out of his Protection and waging War against us.

HE has plundered our Seas, ravaged our Coasts, burnt our Towns, and destroyed the Lives of our People.

HE is, at this Time, transporting large Armies of foreign Mercenaries to compleat the Works of Death, Desolation, and Tyranny, already begun with circumstances of Cruelty and Perfidy, scarcely paralleled in the most barbarous Ages, and totally unworthy the Head of a civilized Nation.

HE has constrained our fellow Citizens taken Captive on the high Seas to bear Arms against their Country, to become the Executioners of their Friends and Brethren, or to fall themselves by their Hands.

HE has excited domestic Insurrections amongst us, and has endeavoured to bring on the Inhabitants of our Frontiers, the merciless Indian Savages, whose known Rule of Warfare, is an undistinguished Destruction, of all Ages, Sexes and Conditions.

IN every stage of these Oppressions we have Petitioned for Redress in the most humble Terms: Our repeated Petitions have been answered only by repeated Injury. A Prince, whose Character is thus marked by every act which may define a Tyrant, is unfit to be the Ruler of a free People.

NOR have we been wanting in Attentions to our British Brethren. We have warned them from Time to Time of Attempts by their Legislature to extend an unwarrantable Jurisdiction over us. We have reminded them of the Circumstances of our Emigration and Settlement here. We have appealed to their native Justice and Magnanimity, and we have conjured them by the Ties of our common Kindred to disavow these Usurpations, which, would inevitably interrupt our Connections and Correspondence. They too have been deaf to the Voice of Justice and of Consanguinity. We must, therefore, acquiesce in the Necessity, which denounces our Separation, and hold them, as we hold the rest of Mankind, Enemies in War, in Peace, Friends.

WE, therefore, the Representatives of the UNITED STATES OF AMERICA, in GENERAL CONGRESS, Assembled, appealing to the Supreme Judge of the World for the Rectitude of our Intentions, do, in the Name, and by Authority of the good People of these Colonies, solemnly Publish and Declare, That these United Colonies are, and of Right ought to be, FREE AND INDEPENDENT STATES; that they are absolved from all Allegiance to the British Crown, and that all political Connection between them and the State of Great-Britain, is and ought to be totally dissolved; and that as FREE AND INDEPENDENT STATES, they have full Power to levy War, conclude Peace, contract Alliances, establish Commerce, and to do all other Acts and Things which INDEPENDENT STATES may of right do. And for the support of this Declaration, with a firm Reliance on the Protection of divine Providence, we mutually pledge to each other our Lives, our Fortunes, and our sacred Honor.

John Hancock.

Glossary

A

Abatis.

A defensive obstacle made by laying felled trees on top of one another with the branches, sometimes sharpened, facing the enemy.

Absentee landlord.

A proprietor who lives in a country or district other than that where his estate or business is located. Also called an absentee.

Ad valorem.

A term that describes a tax or duty on goods that is set at a percentage of the value of the goods.

Adelantado.

The Spanish term for the governor of a province or colony.

Adjutant.

See Aide-de-camp.

Aide-de-camp.

Usually a military officer, but occasionally a civilian, acting as secretary and confidential assistant to a superior officer of general or flag rank. Also may be called an adjutant.

Albany Congress of 1754.

Often mistakenly referred to as the Albany Convention, the 1754 Albany Congress was a conclave of colonial representatives who met to work out collective relations with Native Americans and to push for a collective colonial government.

Albany Convention.

1) An independent ruling body formed in Albany, New York, in 1689, which was opposed to rebel leader Jacob Leisler's control of the colony of New York, because it feared that his policies would alienate the colony's Iroquois allies. Following a combined French and Native American raid on Schenectady in 1690, the convention relinquished its opposition in favor of mutual defense. 2) This also is an alternate name for the Albany Congress of 1754.

Almshouse.

A home for the poor that is maintained by private charity.

Alum.

A white crystalline double sulfate of aluminum. It may be used medically as an astringent or styptic, as well as to set dyes in fibers or fabrics.

Amaranth.

1) Any of several annuals of the genus *Amaranthus* with dense clusters of tiny green, purplish, or crimson flowers. 2) The seed of amaranth plants used as a native cereal in Central and South America.

American Academy of Arts and Sciences.

A society dedicated to scientific and philosophical studies. Founded in Boston in 1780, it is still in existence.

Amish.

A major Anabaptist sect that took its name from Jacob Amman, a Swiss Mennonite leader, who came into conflict with other Mennonites over a practice known as "banning and shunning." Amman believed in the maintenance of this strict system of punishment for followers who broke the rules, as well as complete repudiation of all forms of "worldliness."

Animistic.

Relating to animism, the belief in the existence of spirits that inhabit natural objects and phenomena, or of spirits separate from bodies.

Antinomian.

One who follows the belief of antinomianism, a theological doctrine that originated in Germany around 1535, with John Agricola. Antinomianism maintains that through faith and the Gospel, man is saved and freed from the need to follow either Mosaic law—that is, the laws of the Old Testament—or the laws of man.

Apothecary.

One who prepares and sells drugs and various compounds for medicinal purposes.

Apprentice.

A trainee to a master craftsman in a given craft or trade in the guild system. *See also* Guild system.

Apprenticeship.

See also Guild system.

Arminians.

Followers of Protestant religious leader Jacob Arminius. The sect rejected the Calvinist doctrines of predestination and election and believed that human free will is compatible with God's sovereignty. Also called Remonstrants or Remonstrators.

Assiento.

A contract between Spain and other nations to provide African slaves to the Spanish colonies in the Americas, especially the contract made with Great Britain in 1713.

Azimuth.

The horizontal angle of the observer's bearing in surveying, measured clockwise from a referent direction, as from the north.

B

Backcountry.

Any sparsely inhabited or remote, rural region. In colonial America, the term was used to refer especially to the western reaches of the colonies.

Baronet.

A British hereditary title of honor reserved for commoners, ranking immediately below the barons and above all orders of knighthood, except the order of the Garter.

Basque.

An ethnic group of unknown origin, inhabiting the western Pyrenees and the Bay of Biscay in France and Spain.

Bastion.

1) A projecting part of a rampart or other fortification. 2) A fortified stronghold.

Bawdy house.

A brothel.

Bayonet.

A dagger-like blade adapted to fit on the muzzle of a rifle or musket for use in close combat.

Belles-lettres.

Literature created as an end in itself, rather than for didactic purposes or informative content, such as most fiction, poetry, and drama.

Belletristic.

Of, or pertaining to, belles-lettres, i.e., light, entertaining, and more sophisticated literature.

Benefit of clergy.

The exemption of a clergyman from trial in a civil court.

Bermuda Company.

A land company chartered by King James I in 1615 to govern Bermuda. The charter was rescinded in 1684, and Bermuda became a British Crown colony.

Bicameral legislature.

A system of government where the legislature is composed of two legislative chambers or branches. Examples of bicameral legislatures include the British government's House of Commons and House of Lords, and the United States Congress, composed of the Senate and the House of Representatives.

Bill of exchange.

A document binding the signer or signers to pay a certain sum to the bearer either on a specific date or on demand, with or without interest, as specified in the document.

Bison.

Popularly known as buffaloes, a wild bovine with a shaggy mane. Once roamed in the millions from the Appalachians to the Rockies, serving as many native peoples' main source of meat and hides.

Blockade.

1) The act of isolating a nation, city, or harbor by using enemy ships to prevent the entrance and exit of traffic and supplies. 2) The ships enforcing such isolation.

Bog iron.

A variety of brown iron ore, or limonite, found in boggy or swampy land.

Borough.

In England, an incorporated town with certain political and legal rights, such as self-government and the right to send a representative to Parliament.

Boston Latin School.

A boys' school founded in Boston in 1635 and the first public school in North America.

Boycott.

To refuse to use or buy certain goods and/or to deal with certain persons or companies as an expression of protest or disfavor.

Broadsheet.

Broadside.

Broadside.

1) In military terms, a broadside may refer to all the guns along one side of a ship, or to the firing of all the guns on one side of a ship simultaneously. 2) In printing, a broadside may be either a large sheet of paper, usually printed on one side, or a published piece, such as an advertisement or public notice, that is printed on a broadside. Such a publication also may be called a broadsheet.

C

Cacique.

1) Spanish adaptation of the Taino word for "chief." 2) An Indian chief, especially in the Spanish West Indies and other parts of Latin America during colonial and postcolonial times.

Cajun.

A corruption of Acadian, used to describe the descendants of the Acadians, who migrated to Louisiana after their expulsion from what would become the Maritime Provinces of Canada.

Calabash.

A variety of gourd that can be dried and used to make containers or utensils.

Camp meeting.

A religious gathering, usually held outdoors or in a tent and lasting for several days, during which attendees may lodge in tents or temporary houses. Also called a revival or revival meeting.

Carrying trade.

The business of transporting goods from one place to another, usually carried out by someone other than the producer of the goods.

Casa de Contratación.

In English, the "House of Trade." Founded in 1503 in Seville, the Casa was established by the Spanish monarchy to regulate trade in the Americas, which the Spanish considered private property. The Casa was also the agency that maintained the Spanish maps of the New World.

Cassava.

The tuberous root of a tropical American shrub, also known as manioc. The sweet variety may be eaten as a vegetable. The bitter variety, which must be processed to remove its poisonous sap, yields a nutritious starch, the source of tapioca.

Catalan.

The people of, and the language spoken in, Catalonia, a region of northeast Spain bordering on France and the Mediterranean Sea.

Catechism.

A form of instruction, especially religious, by means of questions and answers. A set series of questions are asked, and the student must be able to answer them correctly.

Causeway.

A roadway raised above ground level, usually across water or marshlands.

Cavaliers.

The nickname for the Royalist supporters in the English Civil War.

Chancellor of the Exchequer.

The member of the British cabinet in charge of the government income and expenditure.

Charter.

A document issued by a sovereign or legislature that creates and defines the privileges and purposes of a public or private corporation, such as a colony, city, college, or bank.

Chattel.

1) A piece of movable property, such as coinage, furniture, or domestic animals. 2) Slaves were considered to be chattel.

Cholera.

An acute infectious intestinal disease, caused by ingestion of contaminated water or food. Symptoms include profuse watery diarrhea, vomiting, muscle cramps, severe dehydration, depletion of electrolytes. If untreated, this disease causes death in many cases.

Circumferentor.

A surveying instrument used for taking horizontal angles and bearings, also known as a surveyor's compass. It consists of a compass marked in degrees and a horizontal brass bar with uprights with narrow slits for sighting at each end. The whole instrument is usually supported on a tripod by a ball-and-socket joint.

Civet.

A collective name for several catlike mammals. The North American species is a member of the skunk family, and it also releases a foul-smelling musk when in danger. It also is known as a civet cat, ringtail cat, or miner's cat (because it was used by miners to catch rodents).

Clapboard.

1) A long plank with one edge thicker than the other, used as siding for buildings by overlapping one board over the board below it. 2) The act of siding a building using clapboards.

Coin clipping.

A crime involving slicing off slivers of silver or gold from the edges of coins and then melting those slivers down into bullion. Since the value of the coin was equal to the value of the metal, a clipped coin would be of lesser value than an unclipped coin. If the clipping was done discreetly, however, the debased coin could be spent as a whole coin, while the criminal could profit by selling the metal shaving.

Coldstream Guards.

An elite regiment of the British Army.

Column.

In military terms, a body of troops formed in even ranks, one behind the other.

Commonplace book.

A personal journal in which quotable passages, literary excerpts, comments, and ideas or events one wishes to remember are recorded.

Commons.

1) A building or hall for dining at a university or college. 2) Land set aside for common use by members of the community.

Compagnie de la Nouvelle-France.

See *Compagnie des Cent Associes*.

Compagnie des Cent Associes.

One of the companies chartered by the King of France for the exploration and development of New France. Created in 1627 by Cardinal de Richelieu, it brought together approximately 100 associates who promised to populate New France by sending 4,000 Catholic settlers to North America over a fifteen-year period. The company failed in this promise and was dissolved in 1663. Also called the *Compagnie de la Nouvelle-France*.

Company of One Hundred Associates.

Compagnie des Cent Associes.

Company of Royal Adventurers to Africa.

A trading company that was granted a monopoly over the African slave trade by Charles II of England in 1660. The company collapsed in 1667, to be succeeded by the Royal African Company in 1672.

Congregationalism.

1) In general, a type of church government in which each local congregation is self-governing. 2) The system of government and religious beliefs of the Congregationalists, a Protestant denomination.

Continental army.

Formed in Massachusetts after the first battle of the Revolution at Lexington and Concord in April 1775, this became the regular army of patriots who fought for colonial independence. After the Second Continental Congress in July 1776, it was led by George Washington.

Consistory.

In the Anglican Church, a diocesan court presided over by a bishop's chancellor or commissary.

Cooper.

An artisan who builds and repairs wooden barrels, casks, and tubs.

Cooperage.

A cooper's place of business.

Cordage.

1) Rope or cord. 2) Anything made of rope or cord, especially the ropes in a ship's rigging.

Coulter.

A vertical blade or wheel mounted on a plow that cuts the ground ahead of the plowshare.

Council for New England.

Founded in 1621, the Council for New England was granted a royal charter for the lands between Philadelphia and the south coast of Newfoundland. The governor and head of this council, Frederic Gorges, was responsible only to the Crown and had the right to grant land charters. The council was dissolved in 1639.

Counting house.

A building or office used by the accounting and bookkeeping part of a business.

Coueurs des bois.

1) Literally, "woods runners." 2) A woodsman or guide employed by a fur company to transport goods and supplies between remote stations in Canada. Also called *voyageurs*.

Covenant Chain.

A military and trade alliance between the Iroquois Confederation and non-Iroquois tribes of New York, Pennsylvania, and the Ohio River Valley. The non-Iroquois tribes had no vote or direct representation in the ruling Iroquoian Council. The terms of the arrangement made the Iroquois the only group permitted to negotiate trade and alliances with the Europeans. In return, the Iroquois agreed to protect those in the alliance from intertribal warfare.

Covenanter.

A Scottish Presbyterian who supported either the National Covenant of 1638 or the Solemn League and Covenant of 1643, both documents that defended Presbyterianism.

Coverture.

1) Literally, concealment, shelter, or protection. 2) Legally, the state of a woman during marriage, because she is considered under the power and protection of her husband.

Creole.

1) In linguistics, a language or dialect that arises from contact between two other languages and has features of both. Also called a pidgin. 2) In terms of ethnicity, a person from one of the following groups: descendants of the original French settlers of the southern United States (especially Louisiana), those of European descent born in South America or the West Indies, descendants of the Spanish or Portuguese settlers of the Gulf States, or those of mixed African and European ancestry who speak a creolized language, especially one based on French or Spanish.

Criollo.

Spanish for creole.

Crop rotation.

A system of planting the same land with different crops over successive seasons or years, in order to replenish the nutrients in the soil.

Crown colony.

An overseas territory of Britain that was governed directly by officials appointed by the British government (as opposed to a colony founded by a land investment company, which was governed by systems established by the company and the colonists). Also called a royal colony.

Curtesy.

In English common law, the right of a man to use, but not sell, his wife's property after her death.

Customs house.

A building where customs and duties on imported and exported goods are collected, and where ships are cleared for entering or leaving the country.

Cyclometer.

An instrument that records the revolutions of a wheel to indicate distance traveled.

D

Deacon.

A layman elected by the congregation of a church to assist the minister in worship, in pastoral care, and on administrative committees.

Dead reckoning.

A method of estimating the position of a ship without using celestial observations. Taking the last known position of the ship, one uses the compass heading and distance traveled since that position to determine the current position.

Dengue.

An acute, infectious, tropical viral disease transmitted by mosquitoes and characterized by high fever, rash, headache, and severe muscle and joint pain. If untreated, it can be fatal.

Diggers.

A radical political group in England during the Interregnum, the period from 1649–1660 between the reign of King Charles I and Charles II. Diggers were mainly peasants, who advocated a form of primitive communism. They argued that all land belonged equally to the whole of the English people, a position in direct opposition to the English social structure, which was based on a landed gentry and tenant farmers.

Diphtheria.

A very dangerous, contagious disease, in which the air passages, especially the throat, become coated with a false membrane, causing difficulty in breathing, high fever, and weakness. The disease may cause permanent damage to the heart and central nervous system, and, possibly, death.

Disorderly house.

A legal term for a house in which the residents' conduct is likely to become a public nuisance or a house where persons congregate in a way that is likely to cause a disturbance of the peace or other crime. This would include brothels, gaming and betting houses, and other disorderly places of entertainment.

Dockyard.

An area with facilities for building and repairing ships. Also called a shipyard.

Doctrina.

A Spanish mission compound, including the church complex and surrounding Native American villages, which provided crops and labor to support the community.

Doublet.

A close-fitting garment for men, covering the body from the neck to the waist or just below, either with or without sleeves. It was worn by European men from the fifteenth through the seventeenth century.

Dower.

The right of a widow to use, but not sell, the property of her late husband.

Dowry.

1) Most commonly, money or property brought by a bride to her husband when they marry. 2) Dowry may also be equated with the bride price (a sum paid to the bride's father by the groom for permission to wed), or a gift of money or lands from the groom to the bride on marriage.

Dropsy.

A swelling from excessive accumulation of watery fluid in tissue. In modern medical terminology, edema.

Dysentery.

An inflammatory intestinal disease, usually caused by a bacterial, parasitic, or protozoan infection. Characterized by pain, fever, and severe diarrhea, often accompanied by the passage of blood and mucus, it was often fatal in colonial times.

E

Ecumenism.

A movement promoting unity among Christian churches or denominations through greater cooperation and improved understanding.

Enclosure.

In Great Britain, chiefly in the seventeenth through nineteenth centuries, the landed gentry were permitted under a series of acts of Parliament to claim lands that had previously been public or common property and literally enclose them using walls, hedges, or fences. The loss of the use of these lands forced many farmers and villagers into poverty, as they no longer had access to land where they could grow food or graze livestock.

Encomienda.

1) A system formulated by the Spanish in the New World by which native lands and people were "commended" to Spanish landlords, or *encomenderos*. The indigenous people were obligated to render goods and services as tribute to their *encomenderos*, who, in return, protected them and indoctrinated them to be Christians. While the Native Americans could not be sold, the system was often tantamount to slavery, due to abusive *encomenderos*. 2) The estate granted to the Spanish landlord under the *encomienda* system.

Engraving.

1) A print or illustration made from a block of wood or metal plate that has the design carved into it in reverse. The block or plate is inked to transfer the design to the paper. 2) The process of making such a block or plate.

Entailment.

To limit the inheritance of property to a designated succession of heirs.

Entrada.

1) Spanish term literally meaning "entrance." 2) A term used to describe an expedition into unexplored territory for purposes of exploration or conquest. Especially used to mean Spanish expeditions in America during the colonial period.

Entrepôt.

A center of trade, marketing, or commercial shipping.

Escheat.

1) A legal term describing the reversion of property of a deceased person to the state due to a lack of legal heirs or claimants. 2) The forfeiture of property to the state as a consequence of a crime committed, usually against the state. 3) The property in question.

Ethnography.

The branch of anthropology that studies and describes human cultures.

Evangelicalism.

A Christian doctrine that stresses the ultimate authority of the Bible and the importance of personal conversion and faith as the means of salvation.

Exogamy.

A system requiring, by either law or custom, that members of a clan, tribe, or class marry someone from outside the group.

F

Fall line.

1) The geological feature that forms a boundary between an upland region and a coastal plain, across which rivers from the upland region drop to the plain as falls or rapids. 2) The low, east-facing cliff that parallels the Atlantic coastline from New Jersey to the Carolinas.

Faith.

1) In the feudal system, the obligation of the tenant or vassal to be faithful to his lord. 2) The special oath by which this obligation was assumed.

Femme covert.

1) In Latin, "hidden women." 2) Signifies a woman's loss of legal rights and property once she became married and her legal identity was folded into that of her husband's.

Femme sole.

Legal term for a single woman. *See also* Femme Covert.

Feudal system.

The political and economic system of Europe in the medieval period (about the ninth century to the fifteenth century), in which the holding of land depended on the obligation of vassals to provide service to their feudal superior or the king, either in labor at the peasant level or in military service at the level of landholders.

Five Nations.

Another name for the Iroquois Confederation before the inclusion of the sixth nation, the Tuscarora, in 1722. Refers to the original nations of the Iroquois Confederation: the Mohawk, Seneca, Cayuga, Oneida, and Onondaga.

Flax.

1) A plant that yields a textile fiber, which is woven to produce linen fabric. 2) The textile fiber itself.

Fleming.

A native or inhabitant of the region of Flanders.

Flintlock.

1) A type of firearm, named for the method of firing. When a flintlock is fired, a hammer bearing a small piece of flint strikes the steel lid to a pan containing the primer (a small amount of gunpowder), which ignites and, in turn, ignites the main charge of powder in the barrel of the weapon, propelling a lead ball out of the barrel and toward its target. 2) The lock mechanism itself. Beginning in the seventeenth century, muskets, rifles, and pistols were manufactured with flintlock mechanisms.

Flying column.

A force of troops equipped and organized to move swiftly and independently of the principal unit to which it is attached.

Freedman.

A person who has been freed from slavery.

Freedom dues.

A sum of money paid to an indentured servant at the end of his indenture. This payment also could be made in tools, seed, or, sometimes, property.

Freeholder.

A person who holds land in fee simple, that is, outright, without limitation to any class of heirs or restrictions on transfer of ownership.

Froe.

A cleaving tool with a sharp blade perpendicular to the handle, usually used to create wood shavings and shingles.

Fulling.

A method of cleaning and increasing the weight and bulk of cloth by moistening, heating, and pressing.

Fulling mill.

1) A machine for fulling cloth. 2) The building that holds such a machine.

Fusilier.

A soldier armed with a fusil, which is a light flintlock musket.

G

Garrison.

1) A fortified military post. 2) The troops at such a post. 3) When used as a verb, the act of supplying or assigning troops to a military post or the creation of a military post to defend an area.

Gauntlet.

A form of torture used by some Native American tribes, in which two lines of men armed with clubs or other weapons were formed, facing each other. The individual to be tortured was then forced to run between the lines while being struck from either side.

Geechee.

See Gullah.

General Council of the Massachusetts Bay Colony.

See Massachusetts General Court.

General Court of the Massachusetts Bay Colony.

See Massachusetts General Court.

Gimlet.

A small hand tool for boring holes. It has a screw tip and a spiral grooved shank, with a handle perpendicular to the shank.

Grammar school.

In British usage, a secondary school, teaching Greek and Latin, as well as other subjects, that prepares students for attending a university.

Gray's Inn.

See Inns of Court.

Great and General Court of the Massachusetts Bay Colony.

See Massachusetts General Court.

Great League of Peace and Power.

Another name for the Iroquois Confederation.

Great Migration.

A large-scale immigration between 1630 and 1640, when roughly 10,000 Puritans settled in the Massachusetts Bay Colony.

Great Negro Plot of 1741.

A supposed conspiracy among slaves and poor laborers in New York City, both black and white, to burn down the city. The trials following the alleged conspiracy resulted in the death by burning or hanging of several slaves and laborers. Ultimately, almost a hundred slaves were tortured, hung, burned, or resold into slavery in the West Indies. Also called the New York Conspiracy, Great New York Conspiracy, or New York Slave Revolt of 1741.

Great New York Conspiracy.

See Great Negro Plot of 1741.

Great Seal.

See Privy Seal.

Great Wagon Road.

A wagon trail used by colonial settlers to move from Pennsylvania southward through the Shenandoah Valley along the flank of the Blue Ridge Mountains through Virginia and the Carolinas to Georgia. The road followed a Native American trail known as the Warrior's Path.

Great War for Empire.

Another name for the Seven Years' War, known in the colonies as the French and Indian War.

Grenadier.

1) Originally, a soldier armed with grenades. 2) A member of the British Grenadier Guards (the first regiment of the royal household infantry) or a member of a special corps or regiment.

Gristmill.

A mill for grinding grain.

Guild system.

A system whereby craftsmen and those who wished to train in a given craft belonged to a guild. This association of persons in the same trade was

formed to protect mutual interests, maintain standards, regulate the wages paid to workers, and the prices charged for goods. A guild member began as an apprentice to a master craftsman, who trained him in the craft and often supplied him with room and board in lieu of wages. Apprentices were usually contracted to a master for a set period of time. As his training proceeded and his skills increased, the apprentice could be promoted to journeyman and be considered a skilled craftsman, but he could not afford to open his own business and thus continued to work for a master for a wage. A master craftsman usually owned his own business, and he employed and trained journeymen and apprentices.

Gullah.

1) A people of African ancestry inhabiting the Sea Islands and coastal areas of South Carolina, Georgia, and northern Florida. 2) The creolized Gullah language (also called Geechee), which is spoken in isolated communities from eastern South Carolina to northern Florida. It is based on English but includes vocabulary elements and grammatical features from several African languages.

H

Habeas corpus.

A legal writ to bring a person before a court or judge, especially to inquire into the cause of a person's imprisonment or detention, in order to protect his or her right to personal liberty.

Haberdasher.

A dealer in small items commonly included in clothing and sewing, such as needles, pins, buttons, and trims. Also, a dealer in men's furnishings, such as shirts, ties, hats, gloves, and other items.

Haberdashery.

The goods sold by a haberdasher, or a haberdasher's shop.

Habitant.

1) A vassal of a seigneur under the feudal system. Used in both France and French colonial Canada. 2) A settler of French descent in either Canada or Louisiana.

Half-way Covenant.

An attempt by the Puritans to resolve a crisis of faith and increase church membership. Originally, in Puritan communities in America, only church members had the right to vote in church matters and take communion. Membership was attained by testifying before the congregation to a conversion experience or moment of revelation. As time passed, fewer children of members were testifying, and thus they were denied church membership. In 1662, a Massachusetts synod agreed that adults who had been baptized would be allotted a "half-way" membership. They could have their children baptized in the church, but neither they nor their children could vote or take communion until they had experienced conversion.

Handbill.

A printed sheet or pamphlet, usually containing an advertisement or other announcement, intended for wide distribution.

Handfasting.

A Scottish tradition of trial marriage. In handfasting, a couple agreed, before at least two witnesses, to live together for a year and a day. At the end of that period, if both were content with the marriage, or if the woman became pregnant, they would marry in the church or in a civil ceremony. Otherwise, they were free to separate.

Harrow.

1) In agriculture, a farm tool consisting of a heavy frame with sharp teeth or upright disks, used to break up and even off plowed ground. 2) The act of using this tool.

Headright.

A grant of land for immigration. The Virginia Company granted fifty acres of land per person, or head, transported to the Virginia colony. The land was granted to the person who had paid the passage, rather than to the person transported. In Maryland, one hundred acres was granted to a settler, with an additional hundred acres for his wife, fifty acres for each of his children, and additional acreage for servants. Headright was intended to encourage settlers to bring their families and servants to increase the viability of the colony. It also encouraged wealthy people to pay for the transport of numerous indentured servants in order to gain title to lands, without necessarily immigrating themselves.

Hellfire Club.

An exclusive English club that met irregularly from 1746 to around 1763, run by Sir Francis Dashwood. The club is rumored to have held sexual rites and satanic meetings at Medmenham Abbey beside the Thames. Also called the Medmenham Monks.

Hemp.

1) The fiber of the skin or rind of the cannabis plant, used to make rope, cordage, and coarse cloth. 2) Various fibers resembling true hemp.

Highwayman.

One who stops and robs travelers on public roads or "highways."

Hogshead.

1) A unit of liquid measure that varied from 63 to 140 gallons. 2) A large barrel or cask with the capacity to hold this liquid measure; these containers were also used to store and transport dry goods, such as tobacco.

Hortatory.

Marked by strong urging or encouragement, as in a speech or sermon.

Hosier.

A tradesman who deals in hosiery and other knit goods.

House of Commons.

The lower house of the British Parliament, composed of elected members from various towns, counties, and boroughs.

House of correction.

An institution for the confinement of persons convicted of minor criminal offenses, such as vagrancy or disorderly behavior.

House of Lords.

The upper house of the British Parliament, composed of members of the hereditary nobility and the clergy.

Howitzer.

A short-barreled, muzzle-loading cannon that fires shells with high trajectories for a relatively short range (similar to a mortar).

Hudson's Bay Company.

A trading company created by a royal charter from Charles II of England in 1670. The charter granted the company a monopoly over all trade with the Native Americans, especially the fur trade, in the region watered by the rivers and streams flowing into Hudson Bay in northern Canada.

Humanism.

A Renaissance philosophy emphasizing secular concerns. Humanism advocated a belief in human dignity and man's capacity for fulfillment through reason and scientific method, and it often rejected religion. This intellectual and cultural movement was triggered by the rediscovery and study of the literature, art, and civilization of ancient Greece and Rome.

Humanist.

One who supports the beliefs of humanism.

Humors.

The four fluids of the body—blood, phlegm, choler (or yellow bile), and black bile—the proportions of which were thought to determine a person's disposition and general health.

Hutterites.

Members of a major Anabaptist sect, named after Jacob Hutter, whom they chose as their leader in 1533. Hutter was burned at the stake in 1536 for refusing to renounce his faith.

I

Impress.

To compel a person to serve in a military force. The British Navy sometimes impressed sailors by picking up drunks at dockside bars, or by forcibly removing sailors from colonial ships to serve on its naval vessels.

Infrastructure.

Underlying base of an organization or system, especially the basic facilities and services necessary to the functioning of a community. These include communication, transportation, water supplies, sanitation, and public institutions such as schools, postal services, and prisons.

Inner Temple.

See Inns of Court.

Inns of Court.

The collective name of the four legal societies in London—Lincoln's Inn, Gray's Inn, the Inner Temple, and the Middle Temple—that have the exclusive right of admission to the British bar. Established sometime before the fourteenth century, each society takes its name from one of the buildings where schools of law were originally held.

Intendant.

1) The chief administrative official of a French province or colony, usually appointed by the monarch. 2) A royal governor.

Internecine.

1) Relating to struggle within a nation or organization. 2) A struggle that is ruinous or fatal to both sides.

Interregnum.

1) The period between the end of a ruler's reign and the beginning of his/her successor's reign. 2) In English history, this term is commonly used to refer to the period of Puritan rule after the English Civil War from 1649, when Charles I was executed, to 1660, when Charles II ascended to the throne.

Iroquois League.

Another name for the Iroquois Confederation.

J

Jacobite.

A supporter of James II (the last Stuart monarch), after his deposition in favor of William of Orange and James II's daughter Mary in 1688. Most Jacobites were Highland Scots or Irish, along with some groups from northern England. The name Jacobite comes from the Latin for James, which is Jacobus.

Jacobite Rising of 1745.

The last major rebellion of the Jacobite sympathizers against the British Crown. The '45, as it became known, came to an inglorious end for the Jacobites with the defeat and near destruction of the Highland clans at the Battle of Culloden.

Janissary.

A loyal soldier or official.

Jansenist.

A follower of Cornelius Jansen, a seventeenth-century Roman Catholic bishop of Ypres, in Flanders, who espoused a doctrine that emphasized predestination, denied free will, and maintained that humans, by their very nature, are incapable of good. Jansen and his doctrines were condemned as heretical by the Roman Catholic Church.

Jargon.

1) In linguistics, a hybrid language or dialect. 2) Terms applicable to a specific subject.

Jeremiad.

1) A literary work or speech telling a tale of sorrow or disappointment, expressing a bitter complaint, or making a prophecy of doom. 2) A lamentation.

Joiner.

A skilled woodworker who joins pieces of wood to make furniture and cabinetry.

Jurist.

1) A public official authorized to decide questions brought before a court of justice. 2) A legal scholar.

Justice of the peace.

A judicial officer or subordinate magistrate appointed for the conservation of the peace in a specified district, with the authority to act upon minor offenses, commit cases to a higher court for trial, perform marriages, and administer oaths.

K

King William's War.

The first of four wars between the French and the British in America over control of North America, which lasted from 1689 to 1697. The associated conflict in Europe was known as the War of the League of Augsburg.

King's Bench.

The highest court of common law in England, which tries both civil and criminal cases. When the sovereign is a woman, it is called the Queen's Bench.

Kiva.

An underground or partly underground chamber in a Pueblo village, used by the men for ceremonies or councils.

L

Land Bank.

A 1740 institution in Massachusetts, which issued paper money to borrowers, whose loans were secured by real estate. The bank was dissolved by Parliament in 1741, on the grounds that it violated the Bubble Act of 1720. The dissolution of the bank left the subscribers and partners in economic turmoil.

Latitudinarians.

A group of Anglicans active from the seventeenth through the nineteenth century, who were opposed to dogmatic positions of the Church of England and believed in allowing reason to inform theological interpretation and judgment.

Letters of marque.

A license granted by a government to a private person to equip and arm a privateer in order to attack and seize the ships and merchandise of an enemy nation.

Levellers.

Members of an English radical political movement that evolved in the parliamentary forces during the English Civil War. The Levellers advocated the dissolution of Parliament as a corrupt body, universal male suffrage, equality before the law, parliamentary democracy, and religious tolerance.

Liberty Boys.

Another name for the Sons of Liberty.

Liberty pole.

See Liberty tree.

Liberty tree.

A flagstaff or tree flying a flag that indicated support for the Revolutionary cause. Also called a Liberty pole.

Lime.

Oxide of calcium, a caustic substance obtained by heating limestone or shells to a high temperature. Lime may be used to treat hides to remove the hair, to eliminate smells in privies, or to treat sails to whiten them.

Limner.

An archaic term for a portrait painter.

Lincoln's Inn.

See Inns of Court.

Lingua franca.

A common language used by speakers of different languages, often for commercial purposes. It may be a hybrid language or creole.

Linsey-woolsey.

A type of rough woven cloth made from a mixture of linen and wool. The mixture may occur in the spinning of the thread used to weave the cloth, or in the weaving itself, using linen for the warp (lengthwise) threads and wool for the woof (crosswise) threads.

Littoral.

1) A coastal region. 2) The shore between the water and the high water mark.

Liturgy.

1) A prescribed formula for public worship. 2) A book or collection of documents containing such a formula.

Lockjaw.

See Tetanus.

London Society of Arts.

See Society for the Encouragement of Arts, Manufactures and Commerce.

Long hunters.

Professional trappers and hunters, who took hunting trips lasting for months at a time into the unexplored lands of what is now Kentucky and Tennessee, as well as into the Ohio River Valley. In the course of these extended hunts, they gained extensive knowledge of the native peoples, terrain, plants, and animals of these territories, knowledge that was passed along to other hunters and potential settlers.

Longhouse.

A long communal dwelling, typical of the Iroquois tribes and built of poles and bark with a central corridor bordered by family compartments on either side.

Lord Privy Seal.

The person who has custody of the Privy Seal. The office of Lord Privy Seal is a traditional sinecure office in the British cabinet, whose holder has no defined function within the government.

Low country.

A low-lying area of land, especially the coastal plains of the Carolinas and Georgia. Sometimes used as one word: lowcountry.

Loyal Land Company.

A land speculation company founded in 1749 by several prominent Virginia citizens, which received a patent for 800,000 acres located along the southern border of Virginia (now southeastern Kentucky), with the provision that the land be settled within four years. The Loyal Company obtained two renewals of the grant. In 1763, however, the Crown rejected further extension of the grant as part of the ban on western settlements that accompanied the Proclamation of 1763. The company's land claims were later upheld, and legal activities involving the company continued until 1842.

Lygonia.

A semi-independent province created in 1643, granted to George Cleeves, between Cape Porpoise and the Kennebec River in what is now Maine. The province was annexed by the Massachusetts Bay Colony in 1658.

M

Magistrate.

A civil officer, such as a judge or a justice of the peace, with the power to administer and enforce laws.

Malt house.

A house in which malt is made from grain. This product is used in making alcoholic beverages, such as beer, ale, porter, and whiskey.

Manioc.

See Cassava.

Manumission.

The formal act of freeing a person from slavery. A manumitted slave usually had to carry legal documentation to prove that he or she was a free person.

Marian martyrs.

Protestants executed for their beliefs during the reign of Mary I of England during the mid-sixteenth century.

Maritime.

1) Of, relating to, or bordering on the sea. 2) Relating to navigation or commerce on the sea.

Maroon.

1) A fugitive black slave, often living in communities in remote or wilderness areas. 2) To abandon with little or no hope of rescue.

Maroon Wars.

A series of unsuccessful slave uprisings in Jamaica in 1725–1739 and 1795–1797.

Marrano.

A Spanish or Portuguese Jew, who converted outwardly to Christianity in order to avoid persecution or expulsion. These forced converts often continued to practice Judaism in secret.

Marron.

A variant spelling of maroon.

Marronage.

Flight from slavery. Petit marronage was a temporary flight, to escape punishment, to visit communities of escaped slaves, or sometimes to negotiate for better treatment. Grand marronage was a flight with no intent to return.

Massachusetts General Court.

The governing body of the colony of Massachusetts, formed in 1691. After the Revolutionary War, the legislature of the state of Massachusetts retained the name. Also referred to as the Great and General Court of the Massachusetts Bay Colony, and occasionally as the General Council of the Massachusetts Bay Colony.

Massachusetts Provincial Congress.

A body formed after the Massachusetts Government Act of 1774 revoked the Massachusetts colonial charter. This congress operated as the government of Massachusetts outside British-controlled Boston. Its functions included promoting communications between towns, making decisions regarding the colony's future, and raising recruits and supplies for the Continental army.

Matrilineal.

Tracing descent, and usually inheritance, through the maternal line.

Matrilocal.

Centered around the residence of the wife's family. In a matrilocal society, a husband moves in with his wife's family after marriage.

Mennonites.

A major Anabaptist sect, which traced its spiritual beliefs to the teachings of Menno Simons, a Dutch Catholic priest who renounced Catholicism in 1536.

Mestizo.

A person born in Mexico, or in former Mexican territory in the United States, of an indigenous and a European parent.

Metacom's War.

Another name for King Philip's War.

Métis.

A child of mixed French-Canadian and Native American ancestry.

Mezzotint.

1) A type of engraving on copper, steel, or other metal, made by drawing upon a roughened surface, and removing the roughness in places by scraping in order to create shading. 2) An engraving produced by the mezzotint process.

Middle Passage.

1) The area of the Atlantic Ocean between the west coast of Africa and the West Indies. 2) The voyage through these waters by African slaves captured in Africa.

Middle Temple.

See Inns of Court.

Militia.

A force of civilians trained as soldiers but not part of the regular army.

Millennialism.

A belief in some Christian denominations, literature, and folk religion that, at some point in the future, there will be a golden age of peace and prosperity, when Christ will reign. This is believed by some to be the final age before the end of the world.

Millwright.

A craftsman who designs, builds, repairs, or maintains mills or mill machinery.

Miniature.

A small painting, often a portrait, executed with great detail, usually on parchment or ivory.

Minor orders.

In the Catholic Church, those of a lower rank than deacon in the church hierarchy, such as an acolyte, reader, or doorkeeper.

Moiety.

One of two subdivisions of a tribe or clan, based on kinship traced through one parent.

Moravian.

A member of a Protestant denomination founded in Saxony in 1722 by Hussite emigrants from Moravia, in central Czechoslovakia. There were colonial Moravian settlements in Pennsylvania and North Carolina.

Mortar.

In military terms, a portable muzzle-loading cannon, used to fire shells at low velocities, short ranges, and high trajectories (similar to a howitzer).

Mourning war.

A custom of the Iroquois and other native peoples, in which raids were conducted on outside groups to obtain captives, as part of the mourning process for a deceased family member. Sometimes the captives were killed to allow the bereaved to vent their grief; other times, the captives were adopted into the bereaved family as a replacement for the deceased member.

M. P.

An abbreviation for Member of Parliament.

Mulatto.

A person of mixed white and African ancestry.

Muscovado.

Unrefined or raw sugar.

Musket.

A long-barreled, smoothbore, muzzle-loading shoulder gun.

N

Nahuatl.

The language of the Aztecs.

Narváez Expedition.

A disastrous expedition commanded by Pánfilo de Narváez in 1527, under charter from the Spanish government, to establish a colony on the north rim of the Gulf of Mexico. Narváez took a party of 300 men to explore the Florida coast on foot. The party was stranded after becoming lost and separated from their ships. Only four men survived the expedition.

Negro Act.

See Stono Rebellion.

New England Confederation.

In 1643, representatives of the colonies of Massachusetts Bay, Plymouth, Connecticut, and New Haven met in Boston and adopted a written constitution to create a league for "mutual safety and welfare." The primary purpose of the league was the coordination of defense and the settlement of boundary disputes. Each colony was to manage its own internal affairs. Also called the United Colonies of New England.

New Learning.

The fundamental precepts of deism, based on the writings of Francis Bacon, John Locke, and Isaac Newton.

New Sweden Company.

A company established in 1637, under the aegis of King Gustavus Adolphus of Sweden, for the purpose of trading furs and tobacco in North America. The company established a colony of Swedish, Dutch, and German merchants and traders called Fort Christina (named for the Swedish queen) on the site of what is now Wilmington, Delaware.

New York Conspiracy.

See Great Negro Plot of 1741.

New York Slave Revolt of 1741.

See Great Negro Plot of 1741.

O

Ohio Company.

A land company formed in 1748 by investors from Virginia to sell Ohio Country land to settlers. The stockholders were granted 200,000 acres in the Ohio Country by the British Crown, on the understanding that they would sell it to colonists and build a fort to ensure the colonists' safety.

Oligarchy.

1) A form of government where the power is resident in a small group of people, who are often related to one another by blood and/or marriage, or are members of the same political faction. 2) The group itself.

Olive Branch Petition of 1775.

A petition sent directly to King George III of England, bypassing Parliament, from the Second Continental Congress in a final attempt to avoid a war for independence. The petition asked for a moderation of taxation and other harsh measures imposed on the colonies by the British government, and it assured the king of the colonists' desire to remain loyal. George III chose to deny the petition.

Ordinary.

1) A weekly community gathering in New England towns, where the citizens prayed, ate, drank, and gossiped. 2) The bill of fare at a tavern. 3) An establishment at which food and drink is served.

Ordination.

Consecration to the ministry, usually through a formal religious ceremony.

Orrery.

A mechanical model of the solar system, which illustrates the relative positions and motions of bodies in the solar system by rotation and revolution of balls moved by an arrangement of gears and wheels.

P

Palatinate.

A territory in what is now southwestern Germany, ruled by the counts palatine. Geographically, the Palatinate consisted of two areas: the Lower or Rhenish Palatinate (Niederpfalz or Rheinpfalz in German) in southwest Germany between Luxembourg and the Rhine River; the Upper Palatinate (Oberpfalz in German) in northern Bavaria, on both sides of the Naab River as it flows south toward the Danube, and eastward to the Bohemian Forest.

Palatine Germans.

People from the area of southern Germany known as the Palatinate.

Paleo-Indians.

A term used to refer to prehistoric Native Americans from the time they arrived in the Americas until around 5000 b.c.e.

Pandemic.

1) General, widespread. 2) In medical terms, an epidemic disease that spreads over a wide area and affects the majority of the population.

Pandering.

Procuring customers for prostitutes; pimping.

Papacy.

The system of church government headed by the pope.

Papal bull.

An official edict or letter issued by the pope, often stating the Church's official position on a controversial issue or sanctioning or forbidding a given activity.

Papist.

1) A derogatory term for a Roman Catholic. 2) Used as an adjective to describe practices in a Protestant church that have Roman Catholic overtones.

Parson's Cause.

A legal dispute involving the Anglican clergy in Virginia. The General Assembly passed a law commuting the salaries of the clergy from tobacco to currency, setting the rate of two pence per pound of tobacco for salaries, when tobacco was selling for six pence per pound. When the King vetoed the act in 1759, several clergymen sued for back salary. The most famous suit was by Reverend James Maury against a Hanover County parish in 1763. Patrick Henry defended the parish, decrying the interference of the king in repealing a law ratified by the colonial government. This case established Henry's reputation.

Pastel.

1) A drawing medium of dried paste formed into crayons. The paste is made of ground pigments and a water-based binder. 2) A drawing made with such pastel crayons.

Patronage.

The power to make appointments to governmental or political positions, especially for political advantage.

Pays d'en haut.

The French name for the Upper Ohio River Valley.

Pearlash.

A crystalline substance produced from potash (made from wood ash) used in making soap, glass, enamels, and dyes.

Philomath.

1) Literally, a lover of learning. 2) A scholar.

Physiognomy.

1) The supposed science of discovering the predominant nature, characteristics, and qualities of the mind of a person, or a race of people, by examining the outward appearance, especially the features of the face. 2) The facial features, or general appearance, of a person or race.

Pidgin.

See Creole.

Pillory.

A wooden framework on a post, with holes for the head and hands, in which offenders were locked to be exposed to public scorn as punishment for relatively minor crimes.

Pinnacle.

A light boat propelled by sails or oars, which was used as a ship's boat for merchant and war vessels.

Pitch.

A thick, dark, sticky substance, obtained from the distilled residue of coal tar, wood tar, or petroleum, that is used for waterproofing, roofing, caulking, and paving.

Plebeian.

1) Of or pertaining to the common people, or large groups of people. 2) Also may be used to mean vulgar.

Plowshare.

The part of the plow that cuts the slice of earth or sod at the bottom of the furrow (trench made by the plow).

Polemic.

An argument or debate, usually refuting or attacking a specific opinion or doctrine.

Polity.

1) An organized society with a specific form of government. 2) The manner of government and underlying principles of a society or organization.

Polymath.

A person who is knowledgeable in many fields.

Porphyria.

A genetic abnormality of the metabolism, which causes abdominal pains, sensitivity to light, and mental confusion.

Portage.

1) To carry boats and supplies overland between two waterways or around an obstacle to navigation. 2) The road or track used for the activity.

Potash.

Crude potassium carbonate, a caustic substance derived from leaching, or soaking, wood ash. In a liquid solution, it is also called lye; evaporation of the liquid produces pearlash, a crystalline substance. Potash is used in making soap, glass, dyes, and enamels.

Predestination.

A religious doctrine that teaches that God has chosen a selected group of people, known only to God, who will receive forgiveness of their sins and enter heaven upon death.

Presbytery.

In the Presbyterian Church, an assembly or court consisting of all the ministers within a district and one ruling elder from each parish or church. This select group has general jurisdiction over the churches in the district, and it is next below the provincial synod in authority.

Presidio.

A military outpost in the Spanish colonies of North and Central America, intended to control the Native American population in the area.

Privateer.

1) A privately owned and manned armed ship, which is commissioned by a government to fight or harass enemy ships. 2) The person who owns or captains such a ship.

Privy Council.

A body of officials chosen by the British monarch as an advisory council to the Crown.

Privy Seal.

The seal that the British sovereign uses in proof of assent to a document. In matters of minor importance, it is only necessary for a document to pass the Privy Seal; those of greater significance must also have the Great Seal.

Probate.

The process of legally establishing the validity of a will before a judicial authority. A will must go through this process, which may be done in a special court, before the provisions of the will can be carried out.

Profiteering.

To make excessive profits on goods in short supply, often through unfair practices, such as price fixing or gouging.

Proprietor.

1) A person, or group of persons, granted the ownership of a colony, with the right to establish a colonial government and distribute land. 2) The owner or anyone with controlling rights to a business, plantation, or other endeavor or property.

Prothonotary.

The chief clerk in certain courts of law.

Publican.

1) Keeper of a public house (inn or hostelry). 2) Tavern keeper.

Pueblo Revolt of 1680.

After years of religious persecution, forced conversion, and exploitation of their labor, the majority of the Pueblo tribes united to drive the Spanish out of New Mexico. They were so successful that it was twelve years before the Spanish returned.

Q

Quadrivium.

In medieval education, the higher division of the seven liberal arts, consisting of geometry, astronomy, arithmetic, and music.

Trivium.Quartermaster.

1) In military usage, an officer responsible for the purchase and distribution of supplies for an army, especially food, clothing, and equipment. 2) In naval usage, the quartermaster is responsible for navigation, steering, communications, and bridge watch, and he supervises lookout.

Queen Anne's War.

Another name for the War of the Spanish Succession.

Queen's Bench.

See King's Bench.

Quinine.

A bitter, colorless alkaloid powder or crystalline substance extracted from the bark of a chinchona tree. Used as a drug to treat malaria, other illnesses involving fever, and some forms of heart disease.

Quinoa.

1) A plant native to the Andes cultivated for its edible seeds. 2) The dried seeds of this plant, used as a high protein food staple and also ground into flour.

Quitrent.

Dating from the Middle Ages, a fee paid in money by a freeman in lieu of services to a landlord.

Quivira.

A legendary Native American city of immense wealth sought by Francisco Vázquez de Coronado, thought to be located in what is now central Kansas. It is generally accepted that the story of the city was a hoax engineered by the Pueblos to remove Coronado and his army from their lands.

R

Rack-renting.

A practice of auctioning newly expired land leases to the highest bidder that usually resulted in exorbitant rents, called rack-rents, which the existing tenants could not pay. This, in turn, resulted in tenants being evicted from the lands their families had occupied, sometimes for generations.

Recollects.

A French branch of the Franciscan order, established at Nevers in 1592.

Reconquista.

1) The Spanish word for "reconquest." 2) The centuries-long struggle between Christians and Muslims for the control of the Iberian Peninsula. The *Reconquista* ended in 1492 with the defeat of Granada, the last Muslim kingdom in Spain, by the combined forces of Aragon and Castile.

Redemptioner.

An emigrant from Europe to America who paid for the voyage upon arrival by serving for a specified period as a bondservant. While indentured servants obtained written contracts to pay for their entire passage before they left Europe, a redemptioner usually paid part of his own passage in advance and promised to establish a contract to pay the remainder once he arrived in America. If a redemptioner did not establish a contract within a given period of time after arrival, his or her services were auctioned off to the highest bidder.

Redoubt.

A small fort, usually intended to be temporary and often without flanking defenses, used especially to fortify the top of a hill, or for defense in hostile territory.

Reformed Protestantism.

Another name for Calvinism.

Regenerate.

Spiritually or morally reformed.

Regicide.

1) The act of killing a king. 2) The person who commits such acts. Specifically, in English history, one of the judges who condemned Charles I to death.

Regular.

In military terms, a soldier who is part of a permanent standing army, as opposed to a militiaman.

Remonstrants or Remonstrators.

See Arminians.

Repartimiento.

1) Spanish for a partition or distribution of property, especially of slaves. 2) An assessment of taxes.

Restoration.

The return of the British monarchy under Charles II in 1660, after the Commonwealth era under Oliver Cromwell.

Revival.

See Camp meeting.

Revival meeting.

See Camp meeting.

Rigging.

The lines and chains used aboard a ship for working sail and supporting masts and spars.

Rigging house.

A building or business where rigging for a ship is prepared.

Ring shout.

A traditional African American form of music, which combines a counterclockwise dance-like movement, call-and-response singing, and the percussion of hand clapping and a stick beating a rhythm on wood. The ring shout influenced later musical forms such as spiritual, jubilee, gospel, and jazz music.

Ropewalk.

A long narrow pathway or building where strands of fiber, such as hemp, are twisted to manufacture rope.

Rosin.

A translucent resin, yellowish to dark brown in color, derived from the sap of various pine trees, which is used to increase sliding friction, as on the bows of certain stringed instruments. It may be used to manufacture a wide variety of products, including varnish, ink, paper, and adhesive.

Roundheads.

The nickname for the parliamentary forces in the English Civil War.

Royal Academy of Arts.

The national academy of art for Great Britain, founded by George III in 1768. It is governed by the Academicians, selected from the most skilled British artists in all areas of the fine arts.

Royal Academy of Sciences.

See Royal Society of London.

Royal colony.

See Crown colony.

Royal Society of London.

A society of leading scientists and scholars founded in London in 1660 to promote scientific discussion, particularly in the physical sciences. It is considered the national academy of science for the United Kingdom.

S

Sachem.

The chief of a Native American tribe, especially the chief of a confederation of the Algonquin tribes of the North Atlantic coast.

Sail loft.

A loft or room where sails for ships are cut out and made.

Salting.

A method of curing or preserving foodstuffs, especially fish and meat, using salt and/or a brine solution.

Salt peter.

Potassium nitrate or niter, one of the chief ingredients in gunpowder. It also may be used as an antiseptic agent in curing meat, as well as medicinally as a diuretic, an asthma medication, and an agent to induce perspiration and reduce fevers.

Sassafras.

1) A North American tree with brittle wood and aromatic leaves and bark. 2) The dried root bark of the sassafras tree, which may be used as a flavoring and is the source of sassafras oil. The oil may be used as a disinfectant; the bark has been used as a fever medicine and diuretic, as well as to treat kidney stones. The dried leaves produce the Southern seasoning and thickener called filé.

Sawmill.

A mill for cutting raw lumber into boards.

Scabies.

A contagious skin disease caused by a parasitic mite, characterized by intense itching and skin irritation.

Scarlet fever.

An acute contagious disease, occurring predominantly among children, causing a scarlet rash, high fever, and, sometimes, death.

Schwenkfelder.

A member of a religious sect founded by Kaspar von Schwenkfeld, a reformer who disagreed with Luther, especially on the deification of the body of Christ.

Scrapple.

A mush of ground meat and meal, usually pork combined with cornmeal or flour, which is set in a mold and then sliced and fried.

Scurvy.

A disease caused by a deficiency of vitamin C, characterized by spongy and bleeding gums, bleeding under the skin, and extreme weakness. Sometimes fatal, it was common among soldiers and sailors, as well as among laborers and prisoners without access to sufficient fresh fruit and vegetables.

Seigneur.

A vassal of the French king under the feudal system. Used in both France and French colonial Canada.

Selectman.

One of a board of officials chosen annually in New England towns to serve as the administrative authority of the town. Selectmen were empowered to make appointments and judicial decisions, as well as to see to the daily administration of town business.

Sephardic Jews.

Jews descended from Jewish families driven from Spain by the Inquisition in 1492. Also called the Sephardim, or Spanish or Portuguese Jews.

Seven Years' War.

A war over territorial control that began in 1756 and extended through Europe, North America, and India. Known as the French and Indian War in America, it was ended with the Treaty of Paris in 1763.

Sextant.

A navigational instrument for measuring angular distances between objects, in order to ascertain latitude and longitude.

Shallop.

A small open boat, fitted with oars and/or sails, used mainly in shallow waters.

Shaman.

1) A Native American spiritual leader and healer. 2) One who acts as a medium between the visible world and the invisible spirit world, and who practices magic or sorcery for purposes of healing, divination, and control over natural events.

Shilling.

A silver coin of Great Britain, equal to twelve pence or one twentieth of a pound (before the British changed to a decimal currency in the 1970s).

Ship money.

A tax levied on English maritime towns and shires to provide ships for war. Charles I's attempt to reinstate this tax was one of the factors that led to his deposition and execution.

Shipwright.

A craftsman who builds and repairs wooden ships.

Shipyards.

See A craftsman who builds and repairs wooden ships.

Shire.

1) A portion of Great Britain that was under the supervision of an earl. A shire was usually roughly equivalent to a county, but was sometimes a smaller area. 2) The division of land into shires.

Six Nations.

Another name for the Iroquois Confederation after the accession of the Tuscarora in 1722. Along with the Tuscarora, the Six Nations included the Mohawk, Seneca, Cayuga, Oneida, and Onondaga.

Smallpox.

An acute, highly infectious disease common during colonial times. Caused by the variola virus, symptoms include high fever and the eruption of blisters, and, untreated, it often leads to death. It was particularly virulent among Native Americans, who had little or no natural immunity to the disease.

Snuff.

1) A finely pulverized tobacco that can be drawn up into the nostrils by inhaling. 2) To take snuff.

Society for Promoting Christian Knowledge.

A society founded by the Anglican Church in 1698 to distribute Anglican literature abroad.

Society for the Encouragement of Arts, Manufactures and Commerce.

A society founded in London in 1754 by William Shipley to encourage the development of the arts, creativity, and commerce. Although the Society sponsored the first public art exhibition in 1760, its primary focus became industrial design and technology rather than fine art.

Society for the Propagation of the Gospel in Foreign Parts.

A missionary body founded by the Anglican Church in 1701 to spread their beliefs and win converts abroad, including the American colonies.

Society of Arts.

See Society for the Encouragement of Arts, Manufactures and Commerce.

Society of Friends.

The formal name of the Protestant denomination commonly known as the Quakers.

South Sea Bubble.

See South Sea Company.

South Sea Company.

A British trading company founded in 1711 by Robert Harley, which was given a monopoly on trade in Spanish South America in return for assuming part of the government's debt. A frenzy of speculation in the company's stock ensued over the period from 1711–1720, but the company's profits from its trading ventures did not meet the claims it had made to investors. The South Sea Company collapsed in September 1720, after the level of trade in its stock led to a drastic drop in stock prices. The buildup and subsequent crash of stock prices is known as the South Sea Bubble, which had a disastrous effect on the British economy.

Speaking in tongues.

To believers, the phenomenon of speaking a language unknown to the speaker during an episode of religious ecstasy, which to nonbelievers sounds like babbling.

Specie.

Hard money, coin.

Spermaceti.

A white, waxy substance obtained from the head of the sperm whale, used for making candles, ointments, cosmetics, and other products.

Stadholder.

The governor of a province in the Netherlands. Also spelled *stadtholder*.

Stamp distributor.

A British government official responsible for the sale of the stamps, required on newspapers, pamphlets, legal documents, commercial bills, advertisements, and other papers issued in the colonies, under the Stamp Act of 1765.

Star Chamber.

1) A fifteenth-century to seventeenth-century English court consisting of judges appointed by the Crown, which conducted its business in closed sessions on cases involving state security. Their judgments were often overly severe and arbitrary. 2) Any court or group that engages in secret, harsh, or arbitrary procedures.

States-General.

The legislative body of the Netherlands.

Stays.

A woman's undergarment stiffened by metal or whalebone (or baleen). The stays were fitted to the upper part of the body and laced; various styles, shapes, and lengths were in vogue during different periods.

Stockade.

1) A defensive barrier made of timbers driven into the ground in an upright position, with each timber in contact with the next to form a wall or fence. 2)

The area protected by such a barrier.

Stocks.

A timber frame with holes in which the ankles and wrists of criminals were confined by way of punishment for relatively minor crimes. The stocks were usually located in a public area of a town, such as a marketplace, in order to shame the offender into better behavior.

Stono Rebellion.

A slave rebellion that took place on September 9, 1739, near the Stono River in South Carolina. Approximately 20 slaves attacked a general store, killing the proprietors and stealing weapons, including firearms. They marched south, recruiting slaves at the homes and businesses they passed, and ultimately killing about 20 white people. The rebellion was quickly suppressed, and it resulted in the passage of the Negro Act in 1740, which forbade slaves to grow their own food, assemble in groups, earn their own money, or learn to read.

Subcutaneous.

Beneath the skin. Usually used in reference to inoculations and other medical procedures.

Subscription library.

A library, usually owned by a society or company, which extended borrowing privileges only to members. Each member paid a fee, or subscription, which supported the purchase of books, the housing of the collection, and the salaries of the staff.

Sumptuary laws.

Laws intended to govern what different classes of citizens were allowed to spend on clothing, furniture, and so on, and to forbid or restrict the use of certain items, such as food, drink, or fabrics. The main purpose of such laws was to mark class distinctions and to prevent anyone from assuming the appearance of a superior class.

Swamp fever.

Another name for malaria.

Syncretism.

Reconciliation or fusion of differing systems of belief, as in philosophy or religion.

Synod.

1) Usually, an ecclesiastical council, or an assembly of church officials or churches. 2) A secular council.

T

Tacky's Revolt.

An unsuccessful slave rebellion in Jamaica in 1760.

Tallow.

The suet or fat of animals, such as cattle, sheep, or horses, which was used in foodstuffs and to make candles, leather dressing, soap, and lubricants.

Tan.

To convert skins or hides into leather, often by treating with tannin (a vegetable-based astringent).

Tanner.

An artisan who tans hides.

Tannery.

A place of business where hides are tanned.

Tariff.

A duty, or fee, imposed by a government on imported or exported goods.

Tetanus.

An acute infection of the central nervous system caused by bacterial infection of open wounds. An early symptom of tetanus is spasms of the jaw and laryngeal muscles; this causes the jaw to lock and inspired the colloquial name "lockjaw" for the disease.

Thatch.

1) Plant stalks or foliage, such as reeds or straw, used as a roofing material. 2) To cover a building with such materials.

Theocracy.

A government ruled by religious authority.

Theodolite.

An instrument consisting of a small telescope, mounted so that it can be rotated both horizontally and vertically. It is used to measure angles in surveying, meteorology, and navigation.

Thresh.

In agriculture, to beat the stems and husks of grain or cereal plants with a flail to separate the grains or seeds from the straw and chaff.

Tithe.

A tenth part of one's annual income, either contributed voluntarily or due as a tax, often for the support of the clergy or church.

Tonsure.

1) The act of shaving all or part of the head, especially in preparation for becoming a priest or joining a monastic order. 2) The part of a monk's or priest's head that has been shaved.

Tory.

1) A British political party, now known as the Conservative Party. 2) During the Revolutionary War, Americans loyal to the British Crown were called Tories, or Loyalists.

Town meeting.

A legislative gathering of the voters of a town for the transaction of public business, such as electing officials, passing laws, levying taxes, and settling disputes. Usually held annually.

Township.

A subdivision of a county, having the status of a unit of local government with varying governmental powers.

Tract.

A leaflet or pamphlet containing a brief treatise on a given subject, usually of a religious, philosophical, or political nature.

Transportation.

In the penal system, the deportation of a convicted offender to a penal colony in lieu of other sentencing. The convict could be transported for life, or for a set period of time. In either case, he served his sentence as a laborer in the colony.

Transylvania Company.

A land company formed in 1775 by Richard Henderson of North Carolina to exploit and colonize the area now comprising much of Kentucky and Tennessee. Henderson purchased approximately 20 million acres from the Cherokee Indians, in hopes of creating a fourteenth colony. The company was denounced by both North Carolina and Virginia, since the land in question lay within their charters. Neither the British Crown nor the Continental Congress recognized the colony. Although it failed as a company and a colony, the Transylvania Company succeeded in furthering the settlement of Tennessee and Kentucky.

Treenails.

Wooden pegs used to hold structures together in lieu of more expensive metal nails.

Trivium.

In medieval education, the lower division of the seven liberal arts, consisting of grammar, logic, and rhetoric. *see also* Quadrivium.

Turner.

A skilled woodworker who carves or uses a lathe to form turned wooden pieces for furniture or architectural details.

Typhoid fever.

A communicable disease marked by fever, diarrhea, prostration, headache, intestinal inflammation, and, sometimes, death. It is caused by a bacterium (*Salmonella typhi*) usually ingested with food or water.

Typhus.

Any of several infectious diseases caused by the rickettsia bacterium, usually transmitted by fleas, lice, or mites. Symptoms of typhus include severe headache, sustained high fever, depression, delirium, and the eruption of red rashes on the skin. Sometimes fatal, it also is called prison fever, ship fever, and jail fever.

U

Unchurched.

Not belonging to or participating in a church.

Unfree labor.

Workers who were unable to leave their place of employment at will. Unfree labor included both slaves and indentured servants.

Unicameral legislature.

A system of government where the legislature is a single legislative chamber.

Unitarianism.

A Christian doctrine derived in part from the precepts of deism. Unitarianism denies the doctrine of the Trinity, believing that God exists only in one person. Unitarianism also puts great importance on rationalism and ethical living, with reason and conscience considered the only guides to religious truth. The tenets of complete religious toleration, innate human goodness, and universal salvation are central.

United Colonies of New England.

See New England Confederation.

Universalism.

A Christian doctrine, derived in part from the precepts of deism. The central tenet is the belief in universal salvation. Universalism places great importance on reason as the route to spiritual truth.

Ursulines.

An order of nuns of the Roman Catholic Church, founded in the early sixteenth century and devoted to the education of girls.

V

Variolation.

Inoculation against smallpox by deliberately infecting a healthy person through an incision in the skin. *see also* Subcutaneous.

Vestry.

A committee of members elected to administer the temporal affairs of a parish.

Vestryman.

A man who is a member of a vestry.

Vicinal.

Belonging to or restricted to a limited area or neighborhood.

Visitas.

Spanish missionary stations without resident priests, which were periodically visited by priests from an established mission.

Viticulture.

The cultivation of grapes, usually for wine making.

Voyageurs.

See Coureurs des bois.

W

Walloon.

A French-speaking people of Celtic descent inhabiting southern and southeast Belgium and adjacent regions of France.

Wampum.

A seventeenth-century currency made from drilled shell beads strung together in various lengths, which also had spiritual significance for some Native Americans.

War of the Austrian Succession.

The name for the larger European conflict, the colonial portion of which is known as King George's War (1744–1748).

War of the League of Augsburg.

See King William's War.

War of the Spanish Succession.

The name for the European portion of the war from 1702 to 1713, known in the United States as Queen Anne's War.

Warrior's Path.

The Native American trail that ran north and south through the Shenandoah Valley, extending from New York to the Carolinas. A major artery for hunting, trade, and warfare, it also had a branch that ran westward from what is now east Tennessee through the Cumberland Gap into what is now Kentucky.

Wattle and daub.

A building method that uses interwoven rods and laths or twigs (wattle) plastered with mud or clay (daub) to form walls of simple dwellings or to fill in spaces in timber framed walls.

Werowance.

A Native American chief who owed allegiance and tribute to the head chief of the Powhatan tribe.

Wheel.

In addition to the common uses, a wheel could also be used as an instrument for torture or the punishment of heinous crimes, to which the offender was bound spread-eagled. His limbs were broken by striking them with an iron bar or other heavy tool, whereupon he was left to die. An executioner might also administer several blows to the chest to kill the offender. Thus, offenders were literally "broken upon the wheel."

Wheelwright.

An artisan who builds and repairs wheels for vehicles.

Whig.

1) An eighteenth and nineteenth-century British political party that was opposed to the Tories. 2) A supporter of the war against England during the American Revolution. 3) A nineteenth-century American political party formed to oppose the Democratic Party.

Whooping cough.

A highly contagious respiratory disease, usually affecting children, characterized in its advanced stage by spasms of coughing interspersed with deep, noisy inhalations, sometimes resulting in death.

Wigwam.

A Native American dwelling, usually having an oval or circular framework covered by bark, hides, or mats.

Wilderness Road.

The road cleared through the Cumberland Gap by Daniel Boone and his companions, in order to allow settlers to travel to Kentucky more easily. The Wilderness Road followed a portion of the western branch of the Warrior's Path. Also known as the Wilderness Trail.

Windward Passage.

The channel connecting the Atlantic Ocean with the Caribbean Sea (between Cuba and Haiti).

Winnow.

1) To separate the chaff, or husks of grain, from the grain itself by means of a current of air, after threshing. 2) A tool to perform this separation process.

Workhouse.

A poorhouse where the town poor were maintained at public expense. Its residents were provided with labor, which was usually compulsory for the able-bodied.

Writs of assistance.

Unlimited search warrants issued to customs officials under the Townshend Acts, which allowed them to search any vessel for smuggled goods at will. These warrants were seen by American colonists as an invasion of privacy, and contrary to common law.

Y

Yellow fever.

An infectious disease common in tropical regions, which is caused by a virus transmitted by mosquito bites. During epidemics, the death rate could go as high as 85 percent. The name "yellow" fever arose from the jaundice of the skin that is a prominent symptom.
